SUBJECT: LIMITED GROUNDWATER SAMPLING OF THE OBSERVATION WELL AT THE PROPERTY
Located at 400 San Pablo Avenue, in
Albany, California

Dear Mr. Stevens:

This report presents the results of limited groundwater sampling conducted by Enviro Soil Tech Consultants (ESTC), on October 1, 1999, at the subject site (Figure 1).

The observation well (OB-2) is located in the vicinity of the former tanks excavation (Figure 2). This limited groundwater sampling was conducted at the verbal request of Ms. Eva Chu with the Alameda County Health Care Services Agency (ACHCSA) dated September 27, 1999

FIELD ACTIVITIES:

On October 1, 1999, ESTC's field technician monitored and collected groundwater sample from observation well OB-2 under supervision of Ms. Eva Chu with ACHCSA. Groundwater sample was submitted to a State-certified laboratory for analyses.

Approximately 5 to 10 well volumes of water was purged from the well using a bailer prior the sampling collection in order to assure the sample was representative of surrounding groundwater. A stainless steel bailer was used for sampling collection. Water sampling equipment was decontaminated before and after each well sampling using Tri-sodium Phosphate (TSP) and water wash, followed by a double rinsing. Groundwater sample was contained in a 40 milliliter glass vials. After labeling, the vials were immediately stored in a cold ice chest. Strict chain-of-custody documentation was maintained during sampling acquisition, storage and transportation. The sampling was conducted in accordance with ACHCSA's guidelines.

ANALYTICAL RESULTS:

The water sample from the observation well was analyzed for Total Petroleum Hydrocarbons as gasoline (TPHg) per EPA Method 8015M, Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX) per EPA Method 8020 and Methyl tert-butyl Ether (MTBE) per EPA Method 8020. In addition, the sample was analyzed for EPA Method 8260 for confirmation of MTBE.

Groundwater sample from observation well (OB-2) detected low levels of TPHg at 0.35 milligram per liter (mg/L); BTEX at (0.014 mg/L; 0.0027 mg/L; 0.0008 mg/L and 0.0013 mg/L) and MTBE at 0.033 mg/L. Low levels of Volatile Organic Compounds (VOC's) per EPA Method 8260 were detected in the groundwater sample. Groundwater analytical results is presented in Table 1 (Appendix "A"), and the laboratory analytical report is included in Appendix "C".

LIMITATIION:

This report and the associated work has been provided in accordance with the general principles and practices currently employed in the environmental consulting profession. The contents of this report reflect the conditions of the site at this particular time. The findings of this reports are based on:

1) The observation of field personnel.
2) The results of laboratory analyses performed by a state-certified laboratory.

It is possible that variations in the soil and groundwater could exist beyond the points explored in this investigation. Also, changes in groundwater conditions of a property can occur with the passage of time due to variations in rainfall, temperature, regional water usage and other natural processes or the works of man on this property or adjacent property(ies).

This report is issued with the understanding that it is the responsibility of the owner or his/her representative to ensure that the information contained herein are called to the attention of the Local Environmental Agency.

Services performed by ESTC have been in accordance with generally accepted environmental professional practices for the nature and conditions of the work completed in the same or similar localities at the time the work was performed. This report is not meant to represent a legal opinion. No other warranty, express or implied is made.
