Cambria Project #540-0188

Dear Mr. Borsuk:

As requested, Cambria Environmental Technology, Inc. (Cambria) has prepared this *Groundwater Monitoring and System Progress Report – Fourth Quarter 2004*. Presented in the report are the fourth quarter 2004 activities and results, and the anticipated first quarter 2005 activities. Attached are two additional copies for submittal to Mr. Don Hwang with the Alameda County Health Care Service Agency (ACHCSA) and for your file.

If you have any questions or comments regarding this report, please call me at (510) 420-3361.

Sincerely,  
**Cambria Environmental Technology, Inc.**

Subbarao Nagulapathy  
Project Engineer

## GROUNDWATER MONITORING AND SYSTEM PROGRESS REPORT

### FOURTH QUARTER 2004

**Allright Parking  
1432 Harrison Street  
Oakland, California  
Cambria Project #540-0188**

**January 21, 2005**

#### INTRODUCTION

On behalf of Mr. Mark Borsuk, Cambria Environmental Technology, Inc. (Cambria) has prepared this Groundwater Monitoring and System Progress Report – Fourth Quarter 2004 for the above-referenced site (see Figure 1). Presented in this report are the fourth quarter 2004 groundwater monitoring and remediation activities, and the anticipated first quarter 2005 activities.

#### FOURTH QUARTER 2004 ACTIVITIES AND RESULTS

##### **Monitoring Activities**

**Field Activities:** On December 22, 2004, Cambria conducted quarterly monitoring activities. Cambria gauged and inspected for separate-phase hydrocarbons (SPH) in all monitoring wells. SPH was not detected in any of the wells and groundwater samples were collected from wells MW-1, MW-2, MW-4, and MW-5. Groundwater monitoring field data sheets are presented as Appendix B. The groundwater monitoring data has been submitted to the GeoTracker database. See Appendix E for the GeoTracker electronic delivery confirmation.

**Sample Analyses:** Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by modified EPA Method 8015, and benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method 8021B. Select groundwater samples were also analyzed for MTBE by EPA Method 8260. All analyses were performed by McCampbell Analytical, Inc. of Pacheco, California. The laboratory analytical report is included as Appendix C. Hydrocarbon concentrations are shown on Figure 1 and Table 1. The analytical data was submitted to the GeoTracker database. See Appendix E for the GeoTracker electronic delivery confirmation.

##### **Monitoring Results**

**Groundwater Flow Direction:** Based on depth-to-water measurements collected during Cambria's December 22, 2004 site visit, groundwater beneath the site generally flows toward the north-northeast

at a gradient of 0.004 feet/foot. The overall gradient is consistent with previous quarters, including the groundwater mounding around well MW-1, which is induced by soil vapor extraction (SVE) operations. Depth to water and groundwater elevation data is presented in Figure 1 and Table 1.

**Hydrocarbon Distribution in Groundwater:** Hydrocarbon concentrations were detected in all four sampled wells this quarter. TPHg concentrations ranged from 250 micrograms per liter ( $\mu\text{g}/\text{L}$ ) to 29,000  $\mu\text{g}/\text{L}$  with the highest concentration detected in well MW-4. Benzene concentrations ranged from 3.5  $\mu\text{g}/\text{L}$  to 10,000  $\mu\text{g}/\text{L}$ , with the highest concentration detected in well MW-4. MTBE was not detected above laboratory detection limits in any of the wells. Concentrations in all wells continue to exhibit a stable or decreasing trend in TPHg and BTEX concentrations over the past year. Please refer to Figure 1 and Table 1 for dissolved hydrocarbon concentrations, and Appendix A for benzene concentration and depth to water versus time trend graphs for wells MW-1 through MW-6. Please note that the unshaded symbols on the graphs represent results below laboratory detection limits.

### Corrective Action Activities

**System Design:** The soil vapor extraction/air sparge (SVE/AS) remediation system consists of a positive-displacement blower belt-driven by a 10-horsepower electric motor, an oil-less AS blower directly driven by a 5-horsepower electric motor, control panel, and an auto dialer connected to a phone line to provide remote notification of system status. Four coaxial remediation wells (VES-1/AS-1, VES-2/AS-2, VES-3/AS-3, VES-4/AS-4) and one former monitoring well (MW-1) are individually connected to a central manifold in the remediation system enclosure. In June 2004 the remediation system was modified and the catalytic oxidizer treatment system was replaced with two 2,000-pound vapor-phase carbon vessels arranged in series. See Figure 2 for the location of remediation enclosure and wells.

**SVE/AS System Operation and Maintenance Activities:** During the fourth quarter, Cambria performed system operation and maintenance (O&M) on the SVE/AS system approximately three times per month. Individual well flow, vacuum, and hydrocarbon concentration measurements were collected from all SVE wells and from the system influent sample location (see Tables 2 and 3). During site visits, system operation parameters were recorded in specialized field forms for future system optimization and agency inspection.

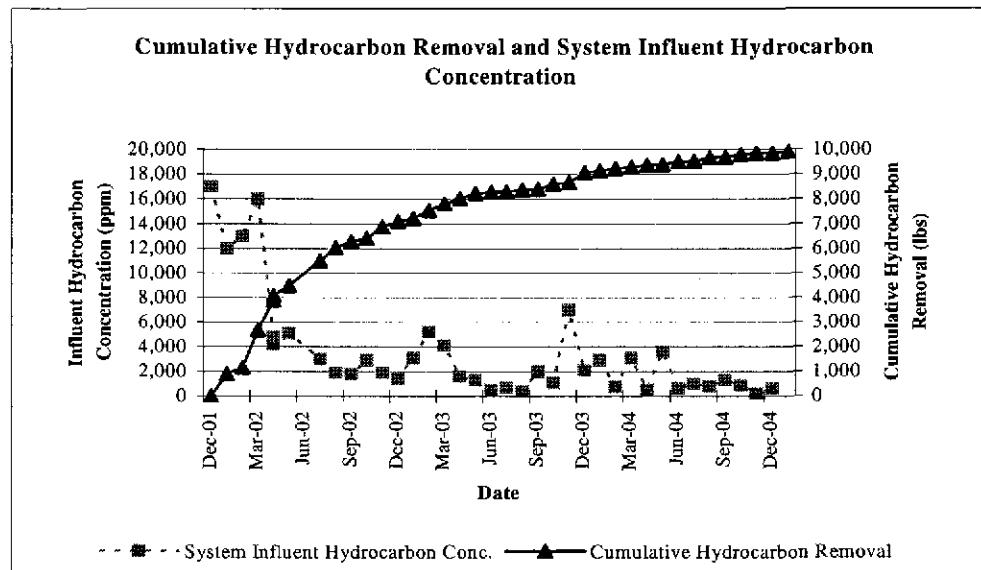

Allright Parking  
1432 Harrison Street  
Oakland, California  
January 21, 2004

System influent vapor samples were collected and submitted for laboratory analysis on October 11, November 4, and December 6, 2004. Table 2 summarizes SVE system operations and analytical results. The analytical laboratory reports from system vapor sampling are included as Appendix D.

**SVE System Performance:** The SVE system was operated throughout the fourth quarter. The system was shutdown manually on November 1, 2004 for carbon changeout activities and shutdown automatically on November 3, 2004 due to a malfunctioning air pressure switch. To maximize extraction flowrates, all extraction wells remained open for the duration of the quarter. System monitoring events were performed throughout the quarter to record hydrocarbon concentrations in individual wells for system optimization.

From October 11, 2004 to January 10, 2005, the SVE system operated for a total of 2,070 hours, a run-time of approximately 95 percent. Influent hydrocarbon vapor concentrations ranged from 220 to 890 parts per million by volume (ppmv) and vapor flow rates ranged from 4.9 to 9.8 standard cubic feet per minute (see Table 2). Hydrocarbon removal rates ranged from approximately 0.35 to 2.8 pounds per day. The fluctuation in hydrocarbon removal rates is primarily due to equipment adjustments related to performance optimization activities. As of January 10, 2005, approximately 9,897 pounds of hydrocarbons have been extracted and destroyed by soil vapor extraction activities (see graph below and Table 2).

**AS System Performance:** Active air sparge operation was initiated on December 30, 2004. Ambient air is injected into air sparge wells (AS-1 through AS-4) at flowrates of 2 standard cubic feet per

minute and at pressures ranging from 2 to 11 pounds per square inch. SVE flowrates and hydrocarbon concentrations will be monitored to evaluate effectiveness of air sparge activities.

## **ANTICIPATED FIRST QUARTER 2005 ACTIVITIES**

### **Monitoring Activities**

Cambria will gauge all monitoring wells; check wells for SPH; and collect groundwater samples from wells not containing SPH. As per the sampling schedule, all wells (MW-1 through MW-6) will be sampled during the first quarter event. Groundwater samples will be analyzed for TPHg by modified EPA Method 8015, and BTEX and MTBE by EPA Method 8021B. If MTBE is detected above laboratory detection limits in any sample, confirmation analysis by EPA Method 8260 will be performed. Groundwater monitoring and sampling results will be submitted to the State's GeoTracker database. Cambria will summarize groundwater monitoring activities and results in the *Groundwater Monitoring and System Progress Report - First Quarter 2005*.

### **Corrective Action Activities**

Cambria will continue to perform operation and maintenance visits of the SVE/AS system approximately two to three times per month during the first quarter of 2005. Optimization activities will include system vacuum adjustments to maximize subsurface air flow and extraction flow rates. During site visits, system parameters will be recorded in specialized field forms and will incorporate BAAQMD's required monitoring data. The BAAQMD does not require vapor sampling under the permit conditions governing activated vapor-phase carbon treatment, however, a system influent vapor sample will be collected on a monthly basis to calculate cumulative hydrocarbon mass removal. Passive in-well air sparging will continue in well MW-1 and will be continually monitored and optimized during system O&M events. Cambria will evaluate the performance of the remediation system and include the results with the *Groundwater Monitoring and System Progress Report - First Quarter 2005*.

**Table 1. Groundwater Elevations and Analytical Data - Allright Parking, 1432 Harrison Street, Oakland, California**

Well ID TOC (feet)	Date	Depth to Groundwater (feet)	SPH Thickness (feet)	Groundwater Elevation (feet)	TPHg	Benzene	Toluene (µg/L)	Ethylbenzene	Xylenes	MTBE	Notes
<b>Abbreviations</b>											
TOC = Top of casing elevation											
SPH = Separate-phase hydrocarbons											
TPHg = Total petroleum hydrocarbons as gasoline by modified EPA method 8015											
Benzene, toluene, ethylbenzene, and xylenes by EPA method 8020											
MTBE = Methyl tert-butyl ether      * = MTBE by EPA Method 8020											
** = MTBE by EPA Method 8240											
*** = MTBE by EPA Method 8260											
µg/L = micrograms per liter, equivalent to parts per billion											
-- = Not sampled, not analyzed, or not applicable											
<n = Not detected in sample above n µg/L											
ND = Not detected above laboratory detection limit											
x = Groundwater elevation adjusted for SPH by the relation:											
Groundwater Elevation = Well Elevation - Depth to Water + (0.7 x SPH thickness)											
# = The wellhead elevation was raised by 0.41 feet when well MW-1 was connected to the SVE system on October 31, 2003.											
<b>Notes</b>											
a = Unmodified or weakly modified gasoline is significant.											
b = Lighter than water immiscible sheen is present.											
c = Liquid sample that contains greater than ~2 vol. % sediment.											
d = MTBE result confirmed by secondary column or GC/MS analysis.											
e = Sample analyzed for purgeable hydrocarbons by EPA method 8010, no purgeable hydrocarbons were detected.											
f = Sample analyzed for VOCs by EPA method 8240, no non-BTEX compounds were detected.											
EPA method Modified 8015, no TPHmo was detected.											
g = Sample analyzed for Total Petroleum Hydrocarbons as motor oil (TPHmo)											
h = Analytic sampling discontinued. Approved by Alameda County Department of Environmental Health.											
i = Lighter than gasoline range compounds are significant.											
j = Gasoline range compounds having broad chromatographic peaks are significant.											
k = No recognizable pattern.											
l = Sample diluted due to high organic content.											
m = Liquid sample that contains greater than ~1 vol. % sediment.											
n = TOC well elevation was increased by 3 ft based on a benchmark discrepancy discovered during a well survey performed on September 11, 2002

**Notes and Abbreviations:**

TPHg = Total petroleum hydrocarbons as gasoline

Benz = Benzene

HC Conc. = Hydrocarbon vapor concentrations measured as TPHg and/or benzene

ppmv = Parts per million by volume. Analytical lab results converted from micrograms per liter (ug/l) to ppmv assumes the molecular weight of gasoline to be equal to that of hexane.

at 1 atmosphere of pressure and 20 degrees Celsius.

scfm = standard cubic feet per minute

<sup>1</sup> TPHg and benzene concentrations based on Horiba gas analyzer measurements and/or lab results by Modified EPA Methods 8015 and 8020.

Laboratory analytic results for TPHg and benzene are converted from ug/l to ppmv using conversion rates of 0.28 for TPHg and 0.308 for benzene.

<sup>2</sup> The hydrocarbon removal/emission rate is based on the Bay Area Air Quality Management's District's (BAAQMD) Procedures for Soil Vapor Extraction whereRate = concentration (ppmv) x flow rate (cfm) x 1 lb/mole/386x10<sup>6</sup> ft<sup>3</sup> x molecular weight (86 lb/lb-mole for TPHg, 78 lb/lb-mole for benzene) x 1440 min/day.<sup>3</sup> As per BAAQMD Permit, destruction efficiency requirements are waived if system TPHg effluent concentration is <10.<sup>4</sup> Gasoline Cumulative Removal = The previous removal rates multiplied by the interval days of operation plus the previous total removal amount.

The total TPHg removal is based on analytic results and/or field measurements.

<sup>5</sup> As per the Bay Area Air Quality Management District's letter dated July 9, 2004 effluent analysis is no longer required. Effluent hydrocarbon concentrations are measure using a field Horiba gas analyzer.

\* = Flow Rate and Hydrocarbon Concentrations are now measured from the well manifold because there is no longer any dilution air affecting the calculation of the hydrocarbon removal rate.

-- = Not available, not measured, or not applicable.

**Notes:**

Hydrocarbon concentrations are measured using a Horiba MEXA-554 gas analyzer. Concentration readings above 10,000 ppmv are above the instrument calibration and are not reliable.

-- = Data not available or not collected

\* = Unable to get reading due to the presence of water

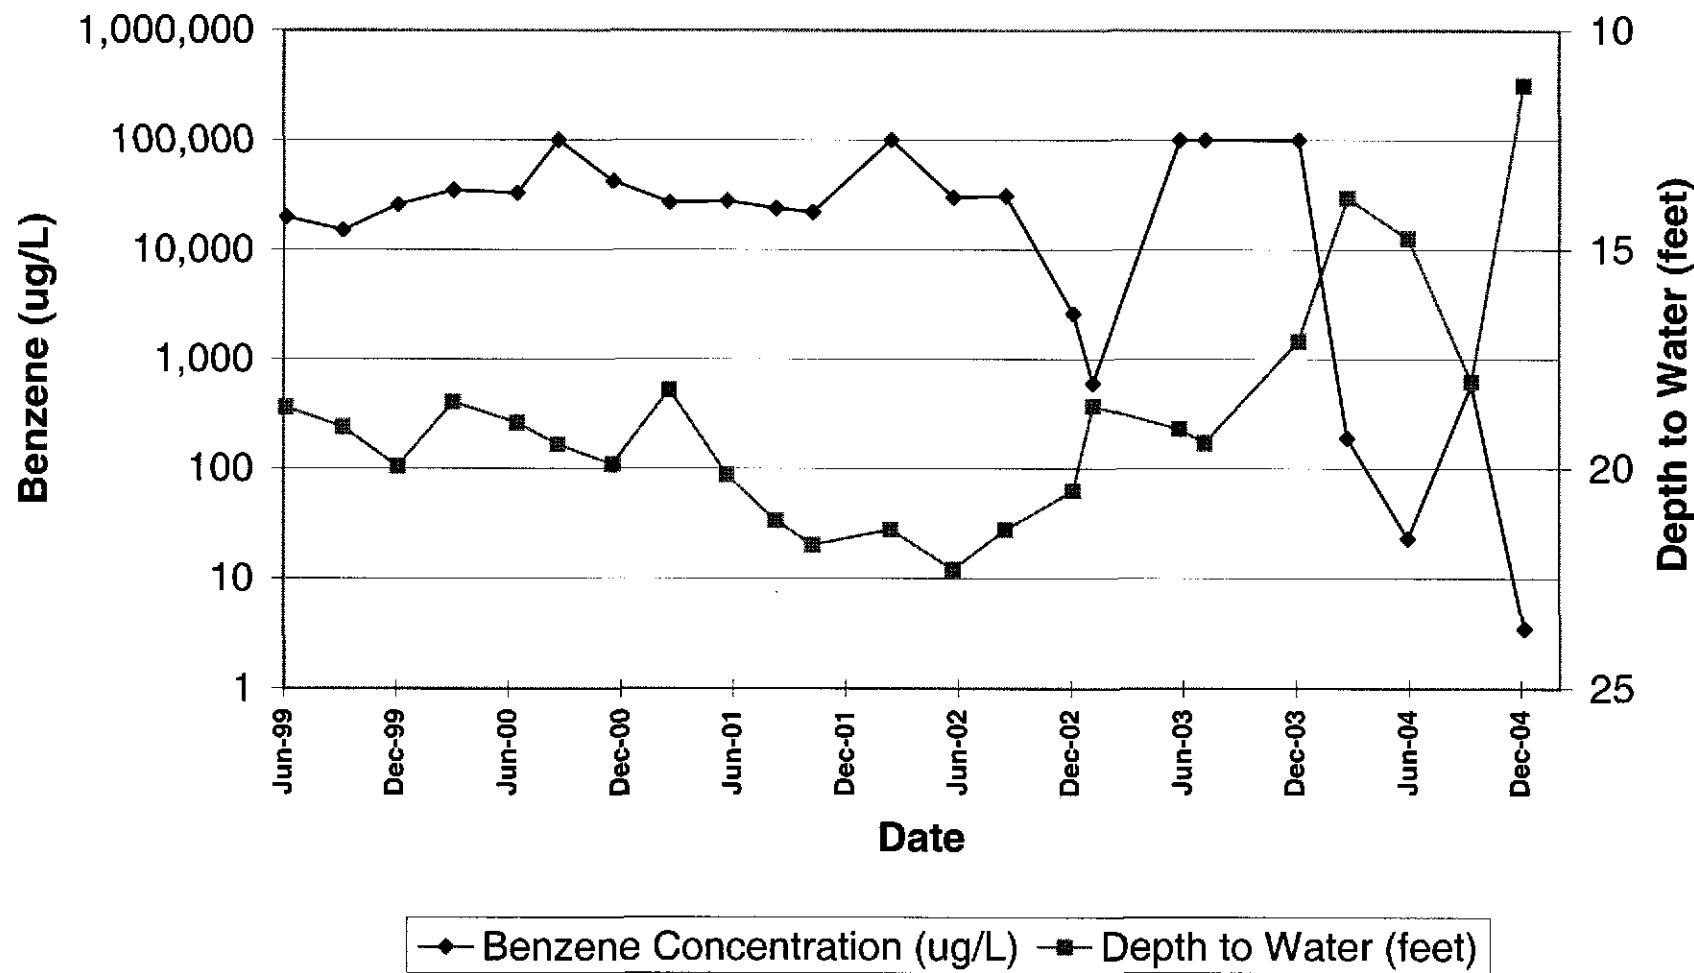

\*\* = Well seal cracked, allowing ambient air to short-circuit vapor extraction. Well seal replaced.

**WorkOrder: 0412502**

January 04, 2005

Dear Matt:

Enclosed are:

- 1). the results of 4 analyzed samples from your **#540-0188; Borsuk project,**
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Yours truly,

Angela Rydelius, Lab Manager

### Methyl tert-Butyl Ether\*

Extraction method: SW5030B

Analytical methods: SW8260B

Work Order: 0412502

Lab ID	Client ID	Matrix	Methyl-t-butyl ether (MTBE)	DF	% SS
001B	MW-1	W	ND;j	1	112
003B	MW-4	W	ND<5.0j	10	112

Reporting Limit for DF =1; ND means not detected at or above the reporting limit	W	0.5	µg/L
	S	NA	NA

\* water and vapor samples and all TCLP & SPLP extracts are reported in µg/L, soil/sludge/solid samples in µg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples in mg/L.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or surrogate coelutes with another peak.

h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) sample diluted due to high organic content; k) client defined reporting limit.

RL = Reporting Limit; MDL = Method Detection Limit; DF = Dilution Factor; J = Estimated value; concentration detected between the MDL and RL.

DHS Certification No. 1644

## QC SUMMARY REPORT FOR SW8021B/8015Cm

Matrix: A

WorkOrder: 0410146

EPA Method: SW8021B/8015Cm		Extraction: SW5030B		BatchID: 13537		Spiked Sample ID: N/A				
Analyte	Sample	Spiked	MS*	MSD*	MS-MSD*	LCS	LCSD	LCS-LCSD	Acceptance Criteria (%)	
	µg/L	µg/L	% Rec.	% Rec.	% RPD	% Rec.	% Rec.	% RPD	Low	High
TPH(btex) <sup>#</sup>	N/A	60	N/A	N/A	N/A	94.3	94.6	0.371	70	130
MTBE	N/A	10	N/A	N/A	N/A	98.1	95.8	2.37	70	130
Benzene	N/A	10	N/A	N/A	N/A	99.4	98.5	0.943	70	130
Toluene	N/A	10	N/A	N/A	N/A	93.3	92	1.46	70	130
Ethylbenzene	N/A	10	N/A	N/A	N/A	96.6	96.4	0.224	70	130
Xylenes	N/A	30	N/A	N/A	N/A	85	85.3	0.391	70	130
%SS:	N/A	10	N/A	N/A	N/A	105	104	1.54	70	130

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions:  
NONE

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery =  $100 * (\text{MS-Sample}) / (\text{Amount Spiked})$ ; RPD =  $100 * (\text{MS} - \text{MSD}) / ((\text{MS} + \text{MSD}) / 2)$ .

\* MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

<sup>#</sup> TPH(btex) = sum of BTEX areas from the FID.

# cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Dear Subbarao:

Enclosed are:

- 1). the results of 1 analyzed sample from your **#540-0188-61; BORSUK project,**
- 2). a QC report for the above sample
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

  
Yours truly,

Angela Rydelius, Lab Manager

## SAMPLE DETECTIONS REPORT

# FIELD POINTS SAMPLED	4
# FIELD POINTS WITH DETECTIONS	4
# FIELD POINTS WITH WATER SAMPLE DETECTIONS ABOVE MCL	3
SAMPLE MATRIX TYPES	WATER

## METHOD QA/QC REPORT

METHODS USED	SW8021F,SW8260B
TESTED FOR REQUIRED ANALYTES?	Y
LAB NOTE DATA QUALIFIERS	N

## QA/QC FOR 8021/8260 SERIES SAMPLES

TECHNICAL HOLDING TIME VIOLATIONS	0
METHOD HOLDING TIME VIOLATIONS	0
LAB BLANK DETECTIONS ABOVE REPORTING DETECTION LIMIT	0
LAB BLANK DETECTIONS	0
DO ALL BATCHES WITH THE 8021/8260 SERIES INCLUDE THE FOLLOWING?	
- LAB METHOD BLANK	Y
- MATRIX SPIKE	Y
- MATRIX SPIKE DUPLICATE	Y
- BLANK SPIKE	Y
- SURROGATE SPIKE - NON-STANDARD SURROGATE USED	Y

## WATER SAMPLES FOR 8021/8260 SERIES

MATRIX SPIKE / MATRIX SPIKE DUPLICATE(S) % RECOVERY BETWEEN 65-135%	Y
MATRIX SPIKE / MATRIX SPIKE DUPLICATE(S) RPD LESS THAN 30%	Y
SURROGATE SPIKES % RECOVERY BETWEEN 85-115%	N
BLANK SPIKE / BLANK SPIKE DUPLICATES % RECOVERY BETWEEN 70-130%	Y

## SOIL SAMPLES FOR 8021/8260 SERIES

MATRIX SPIKE / MATRIX SPIKE DUPLICATE(S) % RECOVERY BETWEEN 65-135%	n/a
MATRIX SPIKE / MATRIX SPIKE DUPLICATE(S) RPD LESS THAN 30%	n/a
SURROGATE SPIKES % RECOVERY BETWEEN 70-125%	n/a

BLANK SPIKE / BLANK SPIKE DUPLICATES % RECOVERY BETWEEN 70-130%

n/a
