CRA Project No. 130105

Dear Mr. Plunkett:

On behalf of Golden Empire Properties, Inc., Conestoga-Rovers & Associates, Inc. (CRA) has prepared this *Groundwater Monitoring Report – Third Quarter 2007*. Presented in the report are the third quarter 2007 activities and the anticipated fourth quarter 2007 activities.

If you have any questions or comments regarding this report, please call me at (510) 420-3307.

Sincerely,  
**Conestoga-Rovers & Associates, Inc.**

Mark Jonas, P.G.  
Senior Project Geologist

## **GROUNDWATER MONITORING REPORT – THIRD QUARTER 2007**

**Former Exxon Service Station  
3055 35th Avenue, Oakland, California  
Fuel Leak Case No. RO0000271  
CRA Project No. 130105**

**December 10, 2007**

### **INTRODUCTION**

On behalf of Golden Empire Properties, Inc., Conestoga-Rovers & Associates, Inc. (CRA) has prepared this *Groundwater Monitoring Report – Third Quarter 2007* for the referenced site (see Figure 1). Presented in the report are the third quarter 2007 activities and anticipated fourth quarter 2007 activities.

Figure 1 is a vicinity map. Figure 2 presents recent monitoring groundwater elevations and selected hydrocarbon data. Table 1 presents well construction details. Table 2 provides recent and historic groundwater level measurements and elevations, and hydrocarbon data. Appendix A contains field data sheets for this monitoring event. Appendix B is the recent laboratory analytical report. Appendix C is time-series plots with benzene and total petroleum hydrocarbons as gasoline (TPHg) concentrations, and groundwater elevations.

### **THIRD QUARTER 2007 ACTIVITIES**

#### **Monitoring Activities**

**Field Activities:** On September 6, 2007, CRA subcontracted Muskan Environmental Sampling (MES) to perform quarterly monitoring activities. MES gauged and inspected for separate-phase hydrocarbons (SPH) in all monitoring wells (Figure 2). Groundwater samples were collected from wells MW-1 through MW-4, RW-5, and RW-9. Groundwater monitoring field data sheets are presented in Appendix A. The monitoring data was submitted to the GeoTracker database.

Prior to groundwater sampling, groundwater levels were measured in all monitoring wells. Each monitoring well was then purged before sampling. MES purged at least three well-casing volumes of groundwater from each monitoring well. Field measurements of pH, conductivity, and temperature of purged groundwater were measured after the extraction of each successive casing volume. Well purging continued until consecutive pH, specific conductance, and temperature measurements appeared to stabilize. Field measurements, purge volumes, and sample collection data were recorded on field sampling data forms, presented in Appendix A.

**CONESTOGA-ROVERS  
& ASSOCIATES**

## Groundwater Monitoring Report – Third Quarter 2007

Fuel Leak Case No. RO0000271

December 10, 2007

Groundwater samples were collected using new disposable bailers, decanted into appropriate sampling containers supplied by the analytical laboratory. Samples were labeled, placed in protective foam sleeves, stored on crushed, water-based ice at or below 4 degrees Celsius and transported under a chain-of-custody (COC) to the laboratory. The COC used for this monitoring event is provided in Appendix B.

**Sample Analyses:** Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and total petroleum hydrocarbons as diesel (TPHd) with silica gel clean-up by modified EPA Method SW8015C; and for benzene, toluene, ethylbenzene and xylenes (BTEX) and methyl tertiary butyl ether (MTBE) by EPA Method SW8021B. Groundwater samples were also collected for field measurement of dissolved oxygen (DO) from each of the sampled wells. DO was recorded on field data sheets provided in Appendix A. The laboratory analytical report is presented as Appendix B. The analytical data has been submitted to the GeoTracker database.

### **Monitoring Results**

**Groundwater Flow Direction:** Based on depth to water measurements collected during MES's September 6, 2007 site visit, groundwater beneath the site flows towards the west-southwest with a gradient of 0.008 ft/ft (Figure 2). The groundwater gradient is generally consistent with historical static groundwater conditions. Groundwater monitoring data is presented in Table 2.

**Hydrocarbon Distribution in Groundwater:** Hydrocarbon concentrations were detected in all six sampled wells. TPHg concentrations ranged from 2,500 micrograms per liter ( $\mu\text{g}/\text{L}$ ) to 41,000  $\mu\text{g}/\text{L}$ , with the highest concentration detected in well MW-3. Benzene concentrations ranged from 590  $\mu\text{g}/\text{L}$  to 4,400  $\mu\text{g}/\text{L}$ , with the highest concentration detected in well MW-3. TPHd concentrations ranged from 690  $\mu\text{g}/\text{L}$  to 14,000  $\mu\text{g}/\text{L}$ , with the highest concentration detected in well MW-3. MTBE was only detected at or above the laboratory reporting limit in well RW-5 with a concentration of 180  $\mu\text{g}/\text{L}$ . Hydrocarbon concentrations are slightly lower than the second quarter 2007 monitoring event (see Appendix C for individual well concentration trend graphs). Analytical results are summarized in Table 2 and shown on Figure 2.

### **Corrective Action Activities**

No corrective action activities took place during the third quarter 2007.

## **ANTICIPATED FOURTH QUARTER 2007 ACTIVITIES**

### **Monitoring Activities**

During the fourth quarter 2007, CRA will coordinate with MES to gauge the site wells, check the wells for SPH, and collect groundwater samples from monitoring wells MW-1 through MW-4, RW-5, and RW-9.

**CONESTOGA-ROVERS  
& ASSOCIATES**

**Groundwater Monitoring Report – Third Quarter 2007**

**Fuel Leak Case No. RO0000271**

**December 10, 2007**

All sampled wells will be field measured for DO. Groundwater samples will be analyzed for TPHg and TPHd with silica gel clean-up by Modified EPA Method SW8015C; and for BTEX and MTBE by EPA Method SW8021B. The laboratory shall also use Zemo & Associates *Protocol for Gravity Separation of Groundwater Samples to Isolate the Water Phase*. CRA will summarize groundwater monitoring activities and results in the *Groundwater Monitoring Report – Fourth Quarter 2007*.

**Offsite and Onsite Characterization**

On-site soil gas characterization and Phase I off-site characterization were preformed and results provide to ACEH. As requested by ACEH, we are currently on-hold for Phase II off-site characterization pending regulatory review and guidance. Once characterization is complete, CRA will submit a site characterization report.

**Methods and Abbreviations:**

TOC = Top of casing elevation measured in feet relative to surveyor's datum.

All site wells were re-surveyed by Virgil Chavez Land Surveying on June 2, 2004 to the CA State Coordinate System, Zone III (NAD83). Benchmark elevation = 177.397 feet (NGVD 29).

GW Depth = Groundwater depth measured in feet below TOC.

GW Elev. = Groundwater elevation measured in feet above mean sea level.

ft = Measured in feet

SPH = Separate-phase hydrocarbons depth measured from TOC.

TPHg = Total petroleum hydrocarbons as gasoline by modified EPA Method SW8015C

TPHd = Total petroleum hydrocarbons as diesel by modified EPA Method SW8015C

TPHmo = Total petroleum hydrocarbons as motor oil by modified EPA Method SW8015C

Benzene, Toluene, Ethylbenzene, and Xylenes by EPA Method SW8021B

MTBE = Methyl tertiary-butyl ether by EPA Method SW8021B

DO = Dissolved oxygen

$\mu\text{g/L}$  = Micrograms per liter, equivalent to parts per billion in water

mg/L = Milligrams per liter, equivalent to parts per million in water

TPE = Two-phase extraction

Sheen = A sheen was observed on the water's surface.

\* = Well inaccessible during site visit

\*\* = No water in well due to system operating in well, value reflects total well depth.

# = abnormally high reading due to added hydrogen peroxide

--- = Not observed/not analyzed

**Notes:**

a = Result has an atypical pattern for diesel analysis

b = Result appears to be a lighter hydrocarbon than diesel

c = There is a >40% difference between primary and confirmation analysis

d = Unmodified or weakly modified gasoline is significant

e = Gasoline range compounds are significant

f = Diesel range compounds are significant; no recognizable pattern

g = Lighter than water immiscible sheen/product is present

h = One to a few isolated peaks present

i = Medium boiling point pattern does not match diesel (stoddard solvent)

j = Aged diesel is significant

k = Oil range compounds are significant

l = Liquid sample that contains greater than ~1 vol. % sediment

m = Stoddard solvent/mineral spirit

**WorkOrder: 0709131**

September 14, 2007

Dear Mark:

Enclosed are:

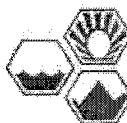

- 1). the results of **6** analyzed samples from your **#103105; Golden Empire Properties project**,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Best regards,

Angela Rydelius, Lab Manager

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

<sup>f</sup> TPH(btex) = sum of BTEX areas from the FID.

# cluttered chromatogram; sample peak coelutes with surrogate peak.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.
