1.0 INTRODUCTION

On behalf of Golden Empire Properties, Inc., Conestoga-Rovers & Associates (CRA) has prepared this *Second 2010 Semi-Annual Groundwater Monitoring & Sampling Report* for the referenced site (Figure 1). Presented in the report are the Second Half 2010 activities and anticipated First Half 2011 activities.

Figure 2 includes recent groundwater elevations and selected dissolved hydrocarbon data. Table 1 includes well construction details and Table 2 includes recent and historical groundwater level measurements, calculated elevations and dissolved hydrocarbon data. Table 3 provides Third Quarter 2008 through Third Quarter 2010 analytical data for oxygenated volatile organic compounds. Appendix A presents field data sheets, Appendix B contains the laboratory analytical and sample chain-of-custody records and Appendix C provides time-series plots with benzene and total petroleum hydrocarbons as gasoline (TPHg) concentrations, along with groundwater elevations.

1.1 SITE INFORMATION

| | |
|---------------------------------------|--|
| Site Address | 3055 35 th Avenue, Oakland, CA |
| Site Use | Vacant Lot |
| Client and Contact | Golden Empire Properties, Inc. Mr. Lynn Worthington |
| Consultant and Contact Person | CRA, Robert Foss, P.G. |
| Lead Agency and Contact Person | Alameda County Environmental Health (ACEH), Ms. Barbara Jakub |
| Agency Case Number | RO0000271 |

2.0 SITE ACTIVITIES AND RESULTS

2.1 CURRENT ACTIVITIES

2.1.1 MONITORING ACTIVITIES

CRA contracted Muskan Environmental Sampling (MES) to conduct semi-annual groundwater monitoring and sampling on September 10, 2010. MES measured depth to water and checked for the presence of separate-phase hydrocarbons (SPH) in each

monitoring well. Groundwater samples were collected from wells MW-1 through MW-4, RW-5, and RW-9. Monitoring and analytic data were submitted to GeoTracker.

Prior to sampling, groundwater levels were measured and each well was purged. To purge the wells, the intake tube of a clean peristaltic pump was placed approximately 1 foot below the initial water level. Depth of groundwater was again measured prior to low-flow purging, during purging, at termination of purging, and immediately prior to sample collection. Temperature, pH, specific conductance, oxygen reduction potential (ORP) and dissolved oxygen (DO) were measured initially and at regular volume intervals. Well purging continued until consecutive pH, specific conductance and temperature measurements were relatively stable. Field measurements, purge volumes, and sample collection data were recorded on field sampling data forms, presented in Appendix A.

Groundwater samples were collected from each well using a clean peristaltic pump. The samples were collected in 40-milliliter (mL) glass volatile organic analysis (VOA) vials and 1-liter amber glass containers supplied by McCampbell Analytical, Inc. (McCcampbell) of Pittsburg, California. Sample containers were labeled, sealed in a plastic bag, and placed on ice in a chilled cooler. A chain-of-custody (COC) record was maintained and is included in Appendix B.

2.1.2 SAMPLE ANALYSES

Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene and xylenes (BTEX) by EPA Method SW8021B/8015Bm. Analysis of total petroleum hydrocarbons as diesel (TPHd) with silica gel clean-up was conducted by modified EPA Method SW8015B. Fuel oxygenates methyl tertiary butyl ether (MTBE), tertiary butyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and lead scavengers 1,2-dichloroethane (1,2-DCA) and 1,2-dibromomethane (EDB) were all analyzed by EPA Method SW8260B. Prior to TPHd analysis of selected samples, the laboratory used a modified Zemo & Associates' *Protocol for Gravity Separation of Groundwater Samples to Isolate the Water Phase* (Zemo Protocol). TPHd results with and without the Zemo Protocol were reported. Groundwater samples were also collected for field measurement of dissolved oxygen (DO) from each of the sampled wells. DO was recorded on field data sheets provided in Appendix A. The laboratory analytical report is presented as Appendix B. The analytical data has been submitted to the GeoTracker database.

2.1.3 CORRECTIVE ACTION ACTIVITIES

No corrective action activities took place during the Second Half 2010.

2.2 CURRENT CONDITIONS

| | |
|---|---------------------|
| Groundwater Flow Direction | West-Southwest |
| Hydraulic Gradient | 0.009 |
| Range of Measured Water Depth from Top of Casing in Monitoring Wells | 15.40 to 19.99 feet |
| Were Measureable Separate Phase Hydrocarbons Observed | No |

2.2.1 GROUNDWATER FLOW DIRECTION

Based on depth to water measurements collected during MES's September 10, 2010 site visit, groundwater beneath the site was calculated as flowing toward the west-southwest at a gradient of 0.009 (Figure 2). The calculated groundwater gradient is generally consistent with historical static groundwater conditions. Groundwater monitoring data are presented in Tables 2 and 3.

2.2.2 HYDROCARBON DISTRIBUTION IN GROUNDWATER

Hydrocarbon concentrations were detected in all six sampled wells. TPHg concentrations ranged from 1,600 (RW-5) to 21,000 micrograms per liter ($\mu\text{g}/\text{L}$) (MW-3). Benzene concentrations ranged from 470 (RW-5) to 8,100 $\mu\text{g}/\text{L}$ (MW-3). TPHd concentrations without the Zemo Protocol ranged from 270 (RW-5) to 2,500 $\mu\text{g}/\text{L}$ (MW-3). TPHd concentrations with the Zemo Protocol ranged from 200 (RW-5) to 2,200 $\mu\text{g}/\text{L}$ (MW-2 and MW-3). MTBE concentrations ranged from 3.6 (RW-5) to 100 $\mu\text{g}/\text{L}$ (MW-3). Concentrations of TBA were detected in all six wells ranging from 20 (RW-5) to 490 $\mu\text{g}/\text{L}$ (MW-3). No TAME, EDB, 1,2-DCA, DIPE, nor ETBE concentrations were detected above laboratory detection limits in any of the six wells.

Detected concentrations are within historical ranges and, with the exception of well RW-9, exhibit generally decreasing trends, as illustrated on the trend graphs presented

in Appendix C. Analytical results are summarized in Tables 2 and 3 and shown on Figure 2.

2.3 PROPOSED ACTIVITIES

2.3.1 MONITORING ACTIVITIES

During the First Half 2011, CRA will contract with MES to gauge all site wells, measure and remove SPH (if observed), and collect groundwater samples from monitoring wells MW-1 through MW-4, RW-5 and RW-9. All sampled wells will be field measured for DO. EPA Method SW8021B/8015Bm will be used to analyze groundwater samples for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene and xylenes (BTEX). Samples will also be analyzed for total petroleum hydrocarbons as diesel (TPHd) with silica gel clean-up by modified EPA Method SW8015B. CRA will summarize groundwater monitoring activities and results in the *First 2011 Semi-Annual Groundwater Monitoring & Sampling Report*.

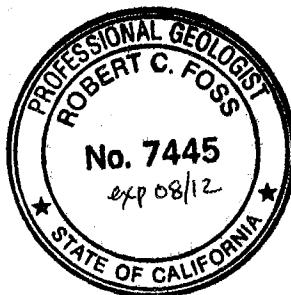

2.3.2 RECOMMENDATION FOR ANALYTIC REDUCTION

Since September 2008 groundwater samples have been analyzed by EPA Method SW8260B for oxygenates methyl tertiary butyl ether (MTBE), tertiary butyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and lead scavengers 1,2-dichloroethane (1,2-DCA) and 1,2-dibromomethane (EDB). Only MTBE and TBA have been reported above method reporting limits (MRLs) over all seven sampling events. The established MTBE and TBA groundwater environmental screening levels (ESLs) where groundwater is not a current or potential drinking water resource are 1,800 and 18,000 µg/L, respectively. Current maximum concentrations reported for MTBE are 97 µg/L and 250 µg/L TBA. CRA recommended elimination of EPA Method SW8260B analysis in the First 2010 Semi-Annual Groundwater Monitoring and Sampling Report, dated April 15, 2010. To date, neither the client nor CRA has received a response from ACEH regarding this recommendation. Unless instructed otherwise by ACEH, CRA will implement this change in the sampling scope during the next monitoring/sampling event, scheduled to occur in March 2011.

All of Which is Respectfully Submitted,
CONESTOGA-ROVERS & ASSOCIATES

Bryan A. Fong

Robert Foss, P.G.

Conestoga-Rovers & Associates, Inc. (CRA) prepared this document for use by our client and appropriate regulatory agencies. It is based partially on information available to CRA from outside sources and/or in the public domain, and partially on information supplied by CRA and its subcontractors. CRA makes no warranty or guarantee, expressed or implied, included or intended in this document, with respect to the accuracy of information obtained from these outside sources or the public domain, or any conclusions or recommendations based on information that was not independently verified by CRA. This document represents the best professional judgment of CRA. None of the work performed hereunder constitutes or shall be represented as a legal opinion of any kind or nature.

Methods, Abbreviations and Notes:

TOC = Top of casing elevation measured in feet relative to surveyor's datum

All site wells were re-surveyed by Virgil Chavez Land Surveying on June 2, 2004 to the CA State

Coordinate System, Zone III (NAD83). Benchmark elevation = 177.397 feet (NGVD 29)

TOC GW Depth = Groundwater depth measured in feet below TOC.

GW Elev. = Groundwater elevation measured in feet above mean sea level.

ft = Measured in feet

SPH = Separate-phase hydrocarbons depth measured from TOC.

(Z) = Laboratory used Zemo Gravity Separation Protocol for Extractables & Purgeables

(Z^{TPHd}) = Laboratory used Zemo Gravity Separation Protocol for Extractables (TPHd)

() = Zemo Gravity Separation Protocol Use Prior to Analysis

TPHg = Total petroleum hydrocarbons as gasoline by modified EPA Method SW8015C

TABLE 2

**GROUNDWATER ELEVATIONS AND ANALYTICAL DATA
FORMER EXXON SERVICE STATION
3055 35th AVENUE
OAKLAND, CALIFORNIA**

| Well ID | Date | GW Depth | SPH | GW Elev. | Note | TPHd | TPHmo | TPHg | Benzene | Toluene | Ethylbenzene | Xylenes | MTBE | DO | DPE System |
|----------------|-------------|-----------------|------------|-----------------|-------------|----------------------------|----------------------------|----------------------------|----------------------------|----------------------------|----------------------------|----------------------------|----------------------------|-----------|-------------------|
| TOC | | (ft TOC) | (ft) | (ft msl) | | ($\mu\text{g}/\text{L}$) | (mg/L) | Status |

TPHd = Total petroleum hydrocarbons as diesel by modified EPA

SW8015C; with Dawn Zemo Separation in (parentheses)

TPHmo = Total petroleum hydrocarbons as motor oil by modified EPA Method SW8015C

Benzene, Toluene, Ethylbenzene, and Xylenes by EPA Method SW8021B

MTBE = Methyl tertiary butyl ether by EPA Method SW8021B, or by SW8260B (designated by parentheses)

DO = Dissolved oxygen

$\mu\text{g}/\text{L}$ = Micrograms per liter, equivalent to parts per billion in water

mg/L = Milligrams per liter, equivalent to parts per million in water

DPE = Dual-phase extraction remediation

Sheen = A sheen was observed on the water's surface.

Field = Observed in field

Lab = Observed in analytical laboratory

a = Result has an atypical pattern for diesel analysis

b = Result appears to be a lighter hydrocarbon than diesel

c = There is a >40% difference between primary and confirmation analysis

d = Unmodified or weakly modified gasoline is significant

e = Gasoline range compounds are significant

f = Diesel range compounds are significant; no recognizable pattern

g = Lighter than water immiscible sheen/product is present

h = One to a few isolated peaks present

i = Medium boiling point pattern does not match diesel (stoddard solvent)

j = Aged diesel is significant

k = Oil range compounds are significant

l = Liquid sample that contains greater than ~1 vol. % sediment

m = Stoddard solvent/mineral spirit

n = Strongly aged gasoline or diesel range compounds are significant in the TPHg chromatogram.

o = MTBE by EPA Method SW8260B

p = No recognizable pattern

* = Well inaccessible during site visit

** = No water in well due to system operating in well, value reflects total well depth.

= abnormally high reading due to added hydrogen peroxide

--- = Not sampled; not analyzed; not applicable; or no SPH measured or observed

Notes and Abbreviations:

TOC = Top of casing

TOC Elevations surveyed by Virgil Chavez Land Surveying on June 2, 2004

to CA State Cooordinate System, Zone III (NAD83);

Benchmark elevation = 177.397 feet (NGVD 29)

GW Depth = Groundwater depth measured in feet below top of casing

GW Elev. = Groundwater elevation measured in feet above mean sea level

ft TOC = Feet below top of casing

ft msl = Feet above mean sea level

 $\mu\text{g}/\text{L}$ = Micrograms per liter

TAME = Tert-amyl methyl ether by EPA Method SW8260B

TBA = t-Butyl alcohol by EPA Method SW8260B

EDB = 1,2-Dibromoethane by EPA Method SW8260B

1,2-DCA = 1,2-Dichloroethane by EPA Method SW8260B

DIPE = Diisopropyl ether by EPA Method SW8260B

ETBE = Ethyl tert-butyl ether by EPA Method SW8260B

a = Lighter than water immiscible sheen/product is present

b = Sample dilluted due to high organic content

WorkOrder: 1009286

September 16, 2010

Dear Bob:

Enclosed within are:

- 1) The results of the **6** analyzed samples from your project: **#130105; Golden Empire Properties**,
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing
McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
