Subject: Fuel Leak Case No. RO0000271 and GeoTracker Global ID T0600100538, Exxon, 3055 35th Avenue, Oakland, CA 94619

Dear Mr. and Ms. Yuen:

Alameda County Department of Environmental Health (ACDEH) is providing regulatory oversight for the investigation and cleanup of a fuel release from the subject property. Investigation and cleanup activities have been ongoing since 1991. Investigation activities in 2007 included installation of a monitoring well (vapor probe) and collection of soil and soil gas samples on your property. The results of the investigation on your property identified fuel related soil contamination at the location shown on Figure 6 (attached).

The subject case may be nearing closure consideration. As part of the closure process ACDEH has requested the Responsible Party collect additional data on your property to confirm whether the contamination still exists at levels that could pose a human health risk. The investigation activities would include installation of a boring to collect soil and ground water samples and resampling of the existing vapor probe. The soil bore will be advanced using minimally disruptive techniques. A temporary plastic casing will be inserted into the soil boring to allow monitoring and sampling of shallow groundwater over the next several months.

ACDEH requests that you cooperate with the Responsible Party and his consultant by allowing them access to perform the work requested by our agency. We would like to meet with you to discuss this request. Please contact us by March 26, 2018. Thank you for your cooperation. Should you have any questions, please contact me at (510) 567-6764 or send me an electronic mail message at keith.nowell@acgov.org.

Sincerely,
