Amir,

The following is a copy of the work plan addendum I sent to you on December 13, 2001, as a result of our first conversation on December 7, 2001. I will discuss the additional borings with grab groundwater samples that we discussed yesterday with my client. I am sending this copy so that you have the most recent scope of proposed work for the site.

Please do not hesitate to call if you have any questions or comments.

Thank you,

Tony

If you have any questions or have trouble receiving this FAX, please call me at (916) 631-1300.

Subject: Work Plan Addendum for Monitoring Well Installation and Soil Boring
Former Chevron Station #9-2960
2416 Grove Way, Castro Valley, CA
DG92960G.3C01

Dear Mr. Bauhs:

At the request of Chevron Products Company (Chevron), Delta Environmental Consultants, Inc. (Delta) network associate Gettler-Ryan Inc. (GR) is submitting this work plan addendum for the above mentioned site (Figure 1), as requested by Alameda County Health Care Service Agency (ACHCSA) personnel during a phone conversation on November 7, 2001. The proposed changes are in reference to the previously submitted Delta report, *Work Plan for Monitoring Well Installation*, dated November 6, 2001.

- In an effort to evaluate the dissolved hydrocarbon plume directly downgradient of the former UST complex and in the area of former groundwater monitoring wells C-1 and C-2, GR proposes moving proposed well C-8 southwest of the former UST area.
- GR proposes to advance one soil boring to groundwater and collect a grab groundwater sample at a location north of the property boundary as presented in Figure 2.
- Soil and grab groundwater samples will be analyzed as described in the original work plan, but will be submitted to Lancaster Laboratories (ELAP #2116) for analysis.

Based on low to non-detectable concentrations of dissolved hydrocarbon from years of groundwater sampling of wells C-4, C-6, and C-7, and verbal approval during the phone conversation with ACHCSA personnel, GR will postpone the semi-annual monitoring and sampling of the wells until further notified. The new proposed well will be monitored and sampled quarterly.

If you have any additional questions, please do not hesitate to call me in our Rancho Cordova office at (916) 631-1300.

Mr. Thomas Bauhs
