Re: B&C Gas Mini Mart, 2008 First Street, Livermore, California
(ACEHD Case No. RO0000278)

Dear Mr. Wickham:

Stratus Environmental, Inc. (Stratus) has recently prepared an August 2014 *Transmittal of Groundwater Monitoring Data* on my behalf. The report was prepared in regards to Alameda County Fuel Leak Case No. RO0000278, located at 2008 First Street, Livermore, California.

I have reviewed the information provided in this data transmittal, sent to me by representatives of Stratus, and "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge."

Sincerely,

Balaji Angle
B&C Gas Mini Mart

TRANSMITTAL

Date August 21, 2014

To:

Mr. Jerry Wickham

Alameda County Environmental Health Department

1131 Harbor Bay Parkway, Suite 250

Alameda, CA 94502

Re: Transmittal of Groundwater Monitoring Data, ACEHD Fuel Leak Case No.
RO0000278, 2008 First Street, Livermore, California

Per your request, in a letter dated May 1, 2014, Stratus conducted a groundwater monitoring event in early August 2014 at 2008 First Street in Livermore (the Site, see Figures 1 through 3). In general, the scope of work involved collecting depth to groundwater measurements, correcting this data to elevation mean sea level, and preparing a groundwater elevation contour map (Figure 4). As stated in the May 1, 2014 letter, ACEHD personnel requested that this data be collected to evaluate potential changes to groundwater flow at the subject site due to expected increases in groundwater pumping in the Livermore area due to regional and state-wide drought conditions. ACEHD personnel also requested in the May 2014 letter that a recommendation for potential sampling of select wells in September 2014 be prepared.

Groundwater Monitoring Event Results

Depth-to-groundwater measurements were collected on August 11, 2014. A field data sheet documenting water level measurements is attached to this transmittal. Since the winter/spring of 2014, groundwater levels have declined appreciably, but are well within historical water level fluctuation ranges (see Table 1).

Figure 4 presents a depiction of interpreted groundwater flow on August 11, 2014. Given the available data set, northwest groundwater flow, at an average gradient of approximately 0.02 ft/ft, was calculated. This observed groundwater flow direction and gradient is generally consistent with the findings of historical work (Jan. 2012 – 0.03 ft/ft; Sept. 2012 – 0.02 ft/ft; March 2013 – 0.02 ft/ft, Feb. 2014 – 0.02 ft/ft, and June 2014 – 0.02 ft/ft, under west-northwest groundwater flow conditions). Given this data set, Stratus has not identified any recent drought related site conditions that are anomalous with historical site data that would appear likely to increase dissolved contaminant plume migration in the site vicinity.

August 21, 2014

Discussion and Recommendations

In late 2013 and early 2014, the site was being considered for environmental case closure under the criteria of the State Water Resources Control Board's 'Low Threat Closure Policy'. As part of the case closure process, ACEHD solicited public comments regarding the pending case closure. During this time, ACEHD received a comment letter, dated January 29, 2014, from the Zone 7 Water Agency. In this letter, the Zone 7 Water Agency stated their objection to closure of the site's environmental case, citing the length of the site's groundwater contaminant plume, their opinion that the site's groundwater contaminant plume lacked stability, and the presence of a water supply well, owned/operated by the California Water Service Company, approximately ½ mile downgradient of the site. After conducting an additional groundwater monitoring and sampling event during the first quarter 2014, Stratus prepared a report, dated April 7, 2014, documenting the results of this sampling event. The April 2014 report also included responses to Zone 7 Water Agency's rationale for not closing the site's environmental case, and information supporting our position that the site can be closed under the 'Low Threat Closure Policy'.

It is our opinion that collection of any additional well sampling data is unnecessary for ACEHD to once again consider closing the site's environmental case. Groundwater monitoring and sampling has been performed at this site for over 23 years, which includes up to 15 years of data obtained in the vicinity of the downgradient perimeter of the fuel contaminant plume. Given this condition, we believe that the available data set is fully sufficient to demonstrate contaminant plume stability and long term contaminant plume attenuation, and collection of further data is not warranted.

Unless specifically mandated by ACEHD in the upcoming weeks, Stratus does not intend to collect groundwater samples on behalf of the subject site during the third quarter 2014. Stratus will otherwise await an ACEHD decision regarding closure of the site's environmental case.

Mr. Jerry Wickham, Alameda County
Transmittal of Groundwater Monitoring Data, August 2014

Notes:

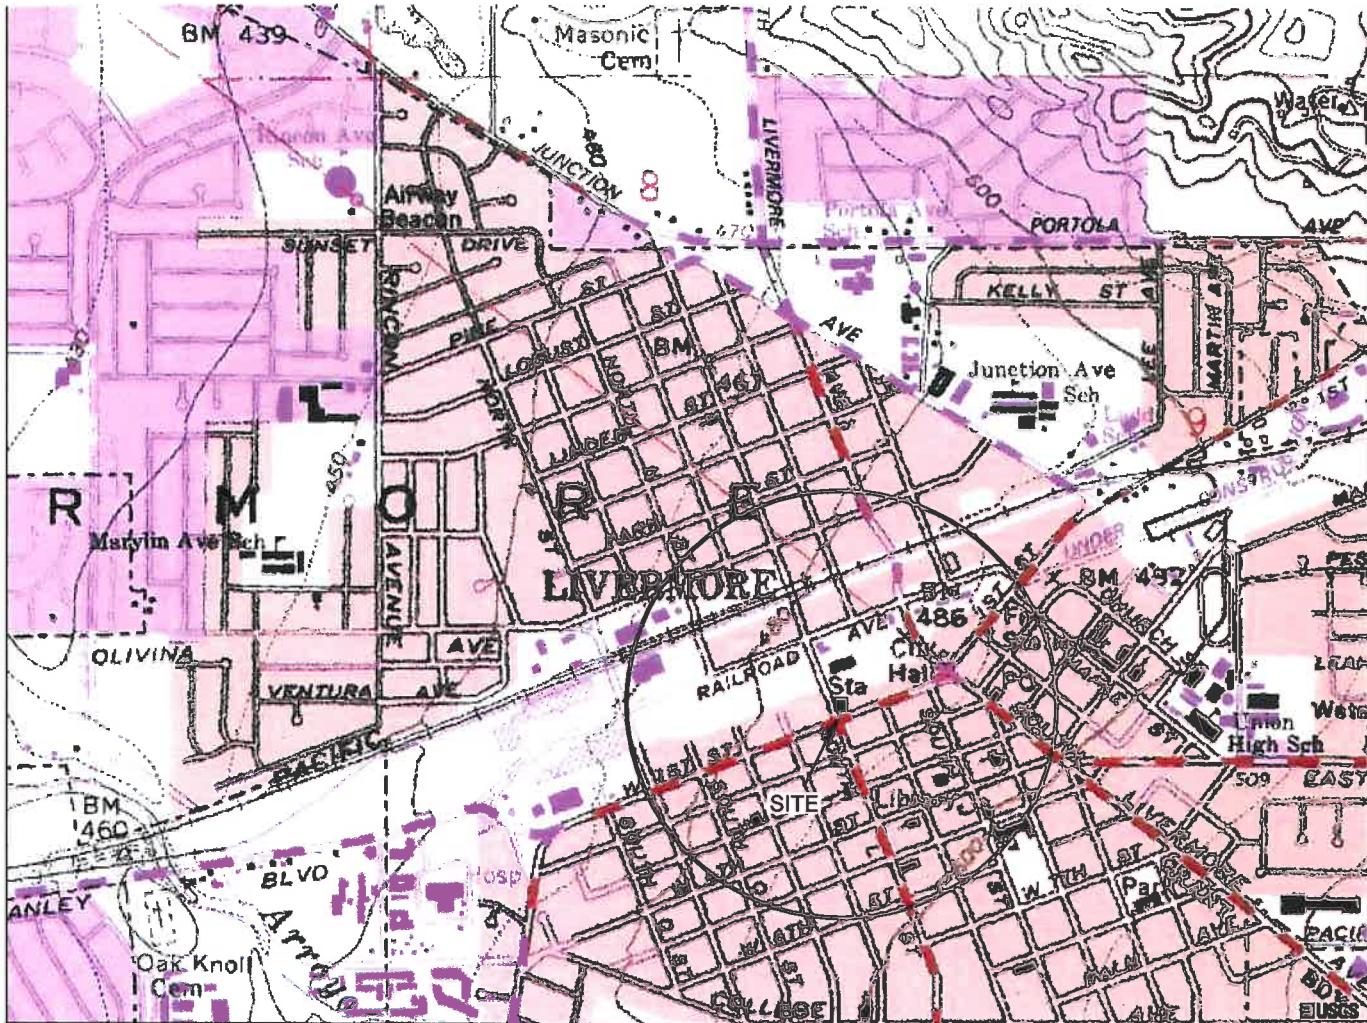

GRO = Gasoline Range Organics C4-C13
 MTBE = Methyl tert-butyl ether
 TAME=Tert amyl-methyl ether
 TBA=Tert-butyl alcohol
 msl = Mean sea level
 µg/L = Micrograms per liter
 -- = Not analyzed/Not measured

1 = Reporting limits were increased due to high concentrations of target analytes.

Analysis:

GRO analyzed using EPA Method SW8015B/ SW8260B,
 all remaining analytes analyzed using EPA Method SW8260B.

All data taken from Golder Associates, 2011 Second
 Semi-Annual Groundwater Monitoring Report, dated
 November 2, 2011
