**SUBJECT: QUARTERLY GROUNDWATER MONITORING AND SAMPLING REPORT
(DECEMBER 2007 THROUGH FEBRUARY 2008) CERTIFICATION**
County Case # RO 285
Xtra Oil Company
3495 Castro Valley Blvd.
Castro Valley, CA

Dear Mr. Plunkett:

P&D Environmental, Inc. has prepared the following document:

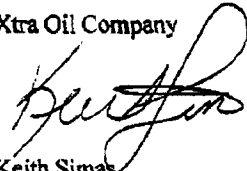

- Quarterly Groundwater Monitoring and Sampling Report (December 2007 Through February 2008) dated February 5, 2008 (document 0014.R69).

I declare under penalty of perjury that the contents and conclusions in the document are true and correct to the best of my knowledge.

Should you have any questions, please do not hesitate to contact me at (510) 865-9506.

Sincerely,

Xtra Oil Company

Keith Simas

**SUBJECT: QUARTERLY GROUNDWATER MONITORING AND SAMPLING REPORT
(DECEMBER 2007 THROUGH FEBRUARY 2008)**
County Case # RO 285
Xtra Oil Company
3495 Castro Valley Blvd.
Castro Valley, California

Gentlemen:

P&D Environmental, Inc. (P&D) is pleased to present this report documenting the results of the most recent quarterly monitoring and sampling of both the on- and off-site wells for the subject property. This work was performed in accordance with P&D's proposal 020599.P1 dated February 5, 1999. Offsite observation wells OW1 and OW2 and onsite wells MW1, MW3, MW4, and EW1 were monitored and wells MW1, MW3, EW1, OW1, and OW2 were sampled on January 17, 2008. The reporting period is for December 2007 through February 2008. A Site Location Map (Figure 1), a Site Plan showing onsite well locations (Figure 2), and a Site Vicinity Map showing offsite observation well locations (Figure 3) are attached with this report. Figure 3 has been updated to show the correct location of OW2. Norbridge School shown on Figure 1 to the south of the subject site has been demolished and been replaced with the Castro Valley BART station and associated parking lot.

BACKGROUND

The site is currently used as a gasoline station. Four 12,000 gallon underground fuel storage tanks are present at the site. Three of the tanks contain gasoline and the fourth tank contains diesel fuel. A 550 gallon waste oil tank was removed from the site in November 1988. The fuel tanks were replaced during August 1992.

Three monitoring wells, designated MW1, MW2 and MW3, were installed at the site on February 14 and 15, 1990 by Western Geo-Engineers. The subsurface materials encountered in the boreholes consisted primarily of silt and clay. The locations of the monitoring wells are shown on Figure 2. Soil samples collected during drilling of the boreholes for the monitoring wells revealed the presence of total petroleum hydrocarbons as gasoline (TPH-G) and total petroleum hydrocarbons as diesel (TPH-D).

TPH-G was encountered in borehole MW1 at depths of 5 and 10 feet below grade at concentrations of 40 and 1,400 mg/kg, respectively; in borehole MW2 at depths of 10 and 15 feet below grade at concentrations of 230 and 95 mg/kg, respectively; and in borehole MW3 at depths of 5, 10, and 15 feet at concentrations of 140, 250 and 25 mg/kg, respectively. In addition, 120 mg/kg TPH-D was detected in borehole MW3 at a depth of 5 feet. Soil samples collected at a depth of 20 feet in borehole MW1 and at a depth of 18 feet in boreholes in MW2 and MW3 did not show any detectable concentration of TPH-G or TPH-D. Groundwater was encountered in the boreholes at depths of approximately 15 to 16 feet below grade.

On February 15, 1990 Western Geo-Engineers drilled three exploratory boreholes at the site designated as SB1, SB2 and SB3. The subsurface materials encountered in the boreholes consisted primarily of silt and clay. The approximate locations of the boreholes are shown on Figure 2. It is P&D's understanding that soil samples were collected from the exploratory boreholes at depths of 10 and 12 feet and evaluated in the field using a photoionization detector. In borehole SB1, TPH-G was detected at the depths of 10 and 12 feet at concentrations of 1,700 and 450 mg/kg, respectively. In boreholes SB2 and SB3, TPH-G was detected at the depths of 10 and 12 feet in both boreholes at concentrations of 800 mg/kg and greater than 2,000 mg/kg, respectively. A groundwater monitoring and sampling program was initiated at the site on February 20, 1990.

It is P&D's understanding that during fuel tank replacement activities in August, 1992 soil surrounding the tank pit was removed and disposed of offsite. An extraction well, designated as EW1, was designed and constructed in one corner of the new tank pit by K&B Environmental at the time of installation of the new tanks. The location of EW1 is shown on Figure 2.

On February 7, 1996 well MW2 was destroyed associated with the widening of Redwood Road. The destruction was overseen by ACC Environmental Consultants of Oakland, California.

On August 15, 1997 P&D personnel oversaw the installation of one groundwater monitoring well, designated as MW4, at the subject site. The location of the monitoring well is shown on the attached Site Plan, Figure 2. This work was performed in accordance with P&D's work plan 0014.W4 dated June 27, 1997. The work plan was approved by the Alameda County Department of Environmental Health (ACDEH) in a telephone conversation with Mr. Scott Seery on August 14, 1997. During the conversation, Mr. Seery indicated that he would record his approval of the work plan in the county file for the site. In accordance with an October 25, 2002 letter from Mr. Seery, groundwater samples are to be analyzed for fuel oxygenates methyl tertiary-butyl ether (MTBE), tertiary amyl methyl ether (TAME), ethyl tertiary-butyl ether (ETBE), diisopropyl ether (DIPE), and tertiary-butyl alcohol (TBA), and lead scavengers ethylene dibromide (EDB), 1,2-dichloroethane (1,2-DCA) using EPA Method 8260; and data for observation wells OW1 and OW2, located in Redwood Road, are to be incorporated into monitoring and sampling reports for the subject site. Documentation of the well installation is provided in P&D's Monitoring Well Installation Report dated September 30, 1997 (document 0014.R25).

On May 31, 2005, P&D submitted an Interim Source Area Remediation Plan (ISARP) to ACDEH proposing free product removal at the site (document 0014.W9). P&D proposed using existing extraction well EW1 in the existing UST pit to dewater the existing pit and the previous UST pit. Monitoring of existing wells MW1, MW3, and MW4 to evaluate the effectiveness of water table drawdown at the site for plume control and associated free product recovery was also proposed.

February 5, 2008
Report 0014.R69

In January 2007, P&D installed a groundwater extraction system consisting of a pump in well EW1, associated piping for discharge of water from the well, and a carbon filtration system. System operation began in February 2007. Documentation of the system installation and operation is provided in P&D's Interim Source Area Remediation Plan Progress Evaluation Report dated October 25, 2007 (document 0014.R67).

In response to a February 6, 2007 letter request from the ACDEH, P&D submitted a Groundwater Monitoring Well Installation Work Plan (MW5 Through MW13) dated March 5, 2007 (document 0014.W10) to the ACDEH proposing the installation of nine offsite groundwater monitoring wells in the vicinity of the subject site designated as MW5 through MW13. The ACDEH conditionally approved the work plan in an April 4, 2007 letter. P&D subsequently submitted a Groundwater Monitoring Well Installation Work Plan Amendment (MW5 Through MW12) dated May 3, 2007 (document 0014.W10A) to the ACDEH proposing the installation of eight offsite groundwater monitoring wells in the vicinity of the subject site designated as MW5 through MW12. Documentation of the implementation of the work plan and work plan amendment is provided in P&D's Groundwater Monitoring Well Installation Report (MW5 Through MW12) dated January 30, 2008 (document 0014.R68).

FIELD ACTIVITIES

Offsite observation wells OW1 and OW2 and onsite wells MW1, MW3, MW4, and EW1 were monitored, and wells MW1, MW3, EW1, OW1, and OW2 were sampled on January 17, 2008. The monitoring and sampling was performed in conjunction with monitoring and sampling by SOMA Environmental Engineering, Inc. of Pleasanton, California at the Former BP site at 3519 Castro Valley Boulevard. Historic monitoring and sampling data for that site are attached with this report as Appendix A.

The wells at the subject site were monitored for depth to water and the presence of free product or sheen. In well MW4 the depth to water and depth to free product was measured to the nearest 1/32-inch with a steel tape and water-finding and product-finding paste. The passive hydrocarbon collection device in well MW4 was removed by P&D personnel and placed in storage near MW1 during pressure transducer installation in well MW4 on November 2, 2006. In wells OW1, OW2, MW1, MW3, and EW1, the depth to water was measured to the nearest 0.01 foot using an electric water level indicator. The presence of free product and sheen was also evaluated using a transparent bailer in wells MW1, MW3, and EW1. Approximately 0.17 feet of free product was measured in well MW4. Although the measured depth to water in offsite well OW1 was recorded as 4.00 feet, the cap was observed to not be securely attached to the top of the PVC well casing, and water was observed to fill the well box to a height equivalent to the top of the PVC well casing. For this reason it appears that water from the well box entered the PVC casing and the depth to water level measurement is suspect. No water level measurement was recorded for offsite well OW2, even though a small amount of water sample was collected for sample analysis.

No sample was collected from MW4 due to the presence of free product in the well.

Prior to well sampling, onsite wells MW1, MW3, and EW1 were purged of a minimum of three casing volumes of water or until the wells had been purged dry. Petroleum hydrocarbon odors were detected from the purge water from all three of the onsite sampled wells, and petroleum hydrocarbon

sheen was detected on the purge water from well MW1. Petroleum hydrocarbon odors were also detected on the samples collected from offsite observation wells OW1 and OW2, and petroleum hydrocarbon sheen was observed on the sample collected from offsite well OW1. Wells OW1 and OW2 were not purged prior to sample collection because of the limited volume available in each well.

During purging operations, the field parameters of electrical conductivity, temperature, and pH were monitored. Once the field parameters were observed to stabilize, a minimum of three casing volumes had been purged, or the wells had purged dry and partially recovered, water samples were collected using a clean Teflon bailer. Records of the field parameters measured during well purging are included with this report.

The water samples were transferred to 40-milliliter glass VOA vials and 1-liter amber glass bottles that were sealed with Teflon-lined screw caps. The VOA vials were overturned and tapped to ensure that no air bubbles were present.

The VOA vials and bottles were then transferred to a cooler with ice, until they were transported to McCampbell Analytical, Inc. in Pittsburg, California. McCampbell Analytical, Inc. is a State-certified hazardous waste testing laboratory. Chain of custody documentation accompanied the samples to the laboratory.

HYDROGEOLOGY

Water levels were measured in all of the wells once during the reporting period.

On January 17, 2008, the measured depth to water in wells MW1, MW3, MW4, and EW1 was 8.01, 8.90, 7.50, and 11.41 feet, respectively. A separate phase hydrocarbon layer measuring approximately 0.17 feet in thickness was measured in well MW4. Using a specific gravity of 0.75, the corrected depth to water in well MW4 is 7.37 feet. The measured depth to water in well OW1 was 4.00 feet, and was measured shortly after a precipitation event. However, the cap was observed to not be securely attached to the top of the PVC well casing, and water was observed to fill the well box to a height equivalent to the top of the PVC well casing. For this reason it appears that water from the well box entered the PVC casing and the depth to water level measurement is suspect. No water level measurement was recorded for offsite well OW2, even though a small amount of water sample was collected for sample analysis. Since the previous monitoring on October 16, 2007, the groundwater elevations have increased in wells MW1, MW3, MW4, and EW1 by 0.64, 0.53, 0.94 (the reported change in water level has been corrected for free product presence), and 0.54 feet, respectively. The measured depth to water in the wells and the separate phase layer thickness measured in well MW4 are summarized in Table 1.

Based on the measured depth to groundwater in the groundwater monitoring wells, the apparent groundwater flow direction at the site on January 17, 2008 was calculated to be to the south-southwest with a gradient of 0.022. During the previous quarterly monitoring and sampling event on October 16, 2007, the groundwater flow direction was calculated to be to the south-southwest with a gradient of 0.015. The groundwater flow direction at the site on January 18, 2008 is shown on Figure 2. The groundwater flow direction and gradient are consistent with the flow direction and gradient observed at the site during the previous monitoring and sampling event on October 16,

2007. The flow direction and gradient are different from other historic values, and are attributed to be the result of groundwater pumping at well EW1 in the former UST pit which began in February 2007.

LABORATORY RESULTS

All of the groundwater samples collected on January 17, 2008 were analyzed for TPH Multirange (TPH-G, TPH-D, and TPH-MO) using EPA Methods 5030B and 3510C in conjunction with Modified EPA Method 8015C; and for benzene, toluene, ethylbenzene, and total xylenes (BTEX), fuel oxygenates MTBE, TAME, ETBE, TAME, and TBA, and for lead scavengers EDB and 1,2-DCA/EDC using EPA Method 5030B in conjunction with EPA Method 8260B.

The laboratory analytical results for the samples from onsite wells MW1, MW3, and EW1 show that TPH-D was detected at concentrations of 3.8, 9.9, and 13 mg/L, respectively; TPH-G was detected at concentrations of 22, 110, and 24 mg/L, respectively; benzene was detected at concentrations of 0.31, 34, and 4.6 mg/L, respectively; and MTBE was detected at concentrations of 0.074, 9.3, and 16 mg/L, respectively.

In offsite wells OW1 and OW2, TPH-D was detected at concentrations of 29, and 0.33 mg/L, respectively; TPH-G was detected at concentrations of 6.9 and 0.14 mg/L, respectively; benzene was detected at a concentration of 0.48 mg/L in OW1 and was not detected in OW2; and MTBE was not detected in OW1 and was detected in OW2 at a concentration of 0.0022 mg/L.

No other fuel oxygenates or lead scavengers were detected in any of the wells except for TBA in wells MW3, EW1, OW1, and OW2 at concentrations of 8.0, 19, 0.097 and 0.011 mg/L, respectively.

Review of the laboratory analytical reports shows that the TPH-D results for all of the samples are described as consisting of both diesel- and gasoline-range compounds. In addition, the laboratory identified sheen on the samples collected from wells MW3 and OW1.

Since the previous sampling on October 16, 2007, all analyte concentrations have increased in well EW1, decreased or remained unchanged in MW1 except for TPH-D and ethylbenzene which increased, and have either increased, decreased, or remained unchanged in well MW3. The laboratory analytical results for the groundwater samples are summarized in Table 2. Copies of the laboratory analytical reports and chain of custody documentation are included with this report.

DISCUSSION AND RECOMMENDATIONS

Offsite observation wells OW1 and OW2 and onsite wells MW1, MW3, MW4, and EW1 were monitored, and wells MW1, MW3, EW1, OW1, and OW2 were sampled on January 17, 2008. Separate phase hydrocarbons were detected in well MW4 at a thickness of 0.17 feet. The passive hydrocarbon collection device in well MW4 was removed on November 2, 2006, by P&D personnel during pressure transducer installation associated with preparation for dewatering the former UST pit. Dewatering of the former UST pit began February 2007 in UST pit extraction well EW1. The decrease in water level in EW1 is associated with the dewatering of the UST pit.

Similarly, the change in groundwater flow direction from a historic southeasterly flow direction to a southwesterly flow direction with a higher gradient is attributed to the UST pit dewatering.

The laboratory analytical results for the groundwater samples from onsite wells MW1, MW3, and EW1 showed TPH-D concentrations ranging from 3.8 to 13 mg/L, TPH-G concentrations ranging from 22 to 110 mg/L, and benzene concentrations ranging from 0.31 to 34 mg/L. Review of the results for the fuel oxygenate and lead scavenger analysis shows that MTBE was detected in onsite wells MW1, MW3, and EW1, at concentrations of 0.074, 9.3, and 16 mg/L, respectively, and TBA was detected in wells MW3 and EW1 at a concentrations of 8 and 19 mg/L, respectively. No other fuel oxygenates or lead scavengers were detected in any of the wells. The UST pit dewatering pump is located in well EW1, and the increase in petroleum hydrocarbon concentrations in well EW1 when compared to water quality data prior to 2007 is attributed to groundwater with elevated concentrations of petroleum hydrocarbons moving into the UST pit as a result of the UST pit dewatering. Wellhead survey data from August 20, 2007 for the onsite and offsite wells discussed in this report that was obtained during the surveying of offsite groundwater monitoring wells MW5 through MW12 is not incorporated in this report pending resolution of discrepancies with historic wellhead survey data.

The measured depth to water in well OW1 was 4.00 feet, and was measured shortly after a precipitation event. Review of Table 1 shows that historically groundwater is encountered very infrequently in this well. In addition, the cap was observed to not be securely attached to the top of the PVC well casing, and water was observed to fill the well box to a height equivalent to the top of the PVC well casing. For these reasons it appears that water from the well box entered the PVC casing and the depth to water level measurement and water quality results are suspect. Review of historic and current water quality results for wells OW1 and OW2 show that petroleum hydrocarbons are present in the sanitary sewer trench at well OW1, and that comparatively low concentrations of petroleum hydrocarbons are present in the sanitary sewer trench at well OW2.

Based on the laboratory analytical results of the water samples collected from the monitoring wells, P&D recommends that groundwater monitoring and sampling be continued. In addition, P&D recommends that future monitoring and sampling efforts continue to be coordinated with the Former BP site at 3519 Castro Valley Boulevard, and that the next quarterly well sampling event include offsite groundwater monitoring wells MW5 through MW12. A copy of the historic water level and water quality data and a site map showing the well locations for 3519 Castro Valley Boulevard are attached with this report as Appendix A.

DISTRIBUTION

A copy of this report will be uploaded to the ACDEH website, in accordance with ACDEH requirements. In addition, a copy of this report will be uploaded to the GeoTracker database.

LIMITATIONS

This report was prepared solely for the use of Xtra Oil Company. The content and conclusions provided by P&D in this assessment are based on information collected during our investigation, which may include, but not be limited to, visual site inspections; interviews with the site owner, regulatory agencies and other pertinent individuals; review of available public documents;

subsurface exploration and our professional judgment based on said information at the time of preparation of this document. Any subsurface sample results and observations presented herein are considered to be representative of the area of investigation; however, geological conditions may vary between borings and may not necessarily apply to the general site as a whole. If future subsurface or other conditions are revealed which vary from these findings, the newly revealed conditions must be evaluated and may invalidate the findings of this report.

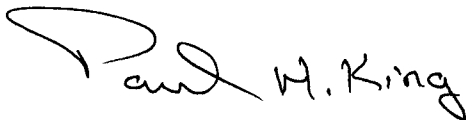

This report is issued with the understanding that it is the responsibility of the owner, or his representative, to ensure that the information contained herein is brought to the attention of the appropriate regulatory agencies, where required by law. Additionally, it is the sole responsibility of the owner to properly dispose of any hazardous materials or hazardous wastes left onsite, in accordance with existing laws and regulations.

This report has been prepared in accordance with generally accepted practices using standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature. P&D is not responsible for the accuracy or completeness of information provided by other individuals or entities which is used in this report. This report presents our professional judgment based upon data and findings identified in this report and interpretation of such data based upon our experience and background, and no warranty, either express or implied, is made. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur.

Should you have any questions, please do not hesitate to contact us at (510) 658-6916.

Sincerely,

P&D Environmental, Inc.

NOTES:

TPH-G = Total Petroleum Hydrocarbons as Gasoline.

TPH-D = Total Petroleum Hydrocarbons as Diesel.

MTBE = Methyl tert-Butyl Ether.

ND = Not Detected.

-- = Not Analyzed.

a = Laboratory analytical report note: lighter than water immiscible sheen present on the sample.

b = Laboratory analytical report note: TPH-D results consist of both diesel-range and gasoline-range compounds.

c = Laboratory analytical report note: TPH-D results consist of gasoline-range compounds.

d = Laboratory analytical report note: TPH-D results consist of both oil-range and gasoline-range compounds.

e = Laboratory analytical report note: TPH-D results consist of oil-, gas, and diesel-range compounds.

f = Laboratory analytical report note: TPH-G results have no recognizable pattern.

+ = Analyzed by EPA Method 8260.

* = This column summarizes results for analysis using EPA Method 8260 for non-MTBE fuel oxygenates (TAME, DIPE, ETBE, and TBA) or lead scavengers (EDB, 1,2-DCA/EDC).

Results in milligrams per liter (mg/L), unless otherwise indicated.

Dear Steve:

Enclosed within are:

- 1) The results of the 5 analyzed samples from your project: **#0014; Xtra Oil/Castro Valley,**
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager

Comments:

NOTE: Samples are discarded 60 days after results are reported unless other arrangements are made. Hazardous samples will be returned to client or disposed of at client expense.

Sample Receipt Checklist

Client Name: **P & D Environmental**

Date and Time Received: **1/18/08 6:01:26 PM**

Project Name: **#0014; Xtra Oil/Castro Valley**

Checklist completed and reviewed by: **Melissa Valles**

WorkOrder N°: **0801484** Matrix Water

Carrier: Rob Pringle (MAI Courier)

Chain of Custody (COC) Information

- Chain of custody present? Yes No
- Chain of custody signed when relinquished and received? Yes No
- Chain of custody agrees with sample labels? Yes No
- Sample IDs noted by Client on COC? Yes No
- Date and Time of collection noted by Client on COC? Yes No
- Sampler's name noted on COC? Yes No

Sample Receipt Information

- Custody seals intact on shipping container/cooler? Yes No NA
- Shipping container/cooler in good condition? Yes No
- Samples in proper containers/bottles? Yes No
- Sample containers intact? Yes No
- Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

- All samples received within holding time? Yes No
- Container/Temp Blank temperature Cooler Temp: 4.4°C NA
- Water - VOA vials have zero headspace / no bubbles? Yes No No VOA vials submitted
- Sample labels checked for correct preservation? Yes No
- TTLC Metal - pH acceptable upon receipt (pH<2)? Yes No NA

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions:
NONE

BATCH 33281 SUMMARY

Sample ID	Date Sampled	Date Extracted	Date Analyzed	Sample ID	Date Sampled	Date Extracted	Date Analyzed
0801484-001B	01/17/08 4:55 PM	01/19/08	01/19/08 2:47 AM	0801484-002B	01/17/08 5:10 PM	01/22/08	01/22/08 6:54 PM
0801484-003B	01/17/08 5:20 PM	01/22/08	01/22/08 7:38 PM	0801484-004B	01/17/08 3:00 PM	01/23/08	01/23/08 10:47 AM
0801484-005B	01/17/08 2:45 PM	01/19/08	01/19/08 7:12 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

APPENDIX A

Figure 2: Site map showing locations of existing monitoring wells, decommissioned wells, offsite temporary well boreholes, and monitoring wells installed by SOMA.

------------------------	-------------	--	------------------------------------	-------------------------------------	---------------------	-----------------------	-----------------------	-----------------------------	-----------------------------	--------------------------

Notes:

< : Not detected above laboratory reporting limit.

1 Top of Casing Elevations were resurveyed by Kier & Wright Engineers Surveyors of Pleasanton, CA on June 21, 2004.

C: Presence confirmed, but RPD between columns exceeds 40%.

H: Heavier hydrocarbons contributed to the quantitation.

NA: Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible. Well ESE-2 also inaccessible during the First Quarter 2008 monitoring event. Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

NM: Not Measured

Well ESE-2 was covered over with dirt during the First Quarter 2007 monitoring event.

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

Equipment Blanks (EB-PRB & EB-PMP) were done to make sure decon efforts were adequate.

Z: Sample exhibits unknown single peak or peaks.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Notes:

< : Not detected above laboratory reporting limit.

NA: Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible.

Well ESE-2 was inaccessible during the First Quarter 2007, dirt was covered over well

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the Site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Gasoline Oxygenates:

TBA: tertiary butyl alcohol

DIPE: isopropyl ether

ETBE: ethyl tertiary butyl ether

TAME: methyl tertiary amyl ether

Ethanol

Lead Scavengers:

1,2-DCA: 1,2-Dichloroethane

EDB: 1,2-Dibromoethane
