Steven: The contractor now plans to excavate and off-haul waste soil on Thursday May 8th. He plans to begin at 5am. This is pending:

- (a) final approval of the offhaul soil by the disposal facility, and
- (b) availability of a mobile lab for sampling. Neither of the two we had on standby are available that date.

Steven and Paresh:

1. The contractor has started excavating for bulk removal.
2. The first phase will be to 3 feet depth. He will then install shoring to border the excavation on the two sides with buildings. The shoring will be driven to 20 feet depth, while soil removal will be only to 8 feet depth below current parking lot elevation, per the plan.
3. The three feet depth is so that lateral bracing can be installed for the shoring at that depth, per his site-specific engineered shoring plan.
4. The shoring will be installed beginning Monday May 5.
5. On Saturday May 10, the contractor will begin bulk excavation at 4am. He plans excavate the entire pit that day, loading the contaminated soil into trucks for delivery to the landfill that day. Excavation will only be to the 45' x 40' area and to 8' depth per the approved ICAP work plan.
6. We will have a DHS-certified mobile lab on site for closure sample analysis for the chemicals in County's plan approval letter.
7. After closure samples are collected, he will, depending on the time, begin backfill with crushed rock, per the plans.

If the schedule changes, we will advise you.

John,

Thanks for the update.

I will not be able to come out to the site during the excavation and confirmation sampling, but I will have one of my co-workers cover for me. Contact Paresh Khatri (phone #777-2478) approximately two hours before confirmation sampling will begin. He will be on site during the confirmation sampling and he will also review any PID data, or other information collected prior to his arrival. Please also include EDB and EDC for the confirmation soil sampling analytical suite. What will happen when groundwater begins to infiltrate during the excavation?

Thank you for your cooperation.

Best Regards,

Steven:

We have been working with the remediation contractor. Submittals, eg shoring plan are the schedule controlling items at this time. Contractor is planning a partially shored approach.
MW-4 was removed under ACPWA permit today.

I believe we will start digging the week of April 28. Do you plan to have a representative on site? At what times do you want to be notified to be onsite?

We plan to sample the sidewalls and analyze for Gas BTEX and MTBE for county records. The landfill may require some other analyses.

Please let me know.
