**Re: Former Chevron Service Station # 9-4816**  
**301 14th Street**  
**Oakland, California**

Dear Ms. Eberle:

Enclosed is a copy of the Second Quarter Groundwater Monitoring Report for 1996, prepared by our consultant Blaine Tech Services, Inc. for the above noted site. Ground water samples were collected and analyzed for TPH-g, BTEX and MTBE constituents.

The samples were collected about six weeks after the DVE system was shut down, but with the air sparging system continuing to operate. The sparging system will continue to operate until no further action is received at which time the said remediation system will be removed, including the sparging system. No separate phase hydrocarbons were detected in any monitoring wells in this quarter. Monitoring wells CR-1 and C-3 which had separate phase hydrocarbons in the fourth quarter of 1995, had readings of 570ppb and <25ppb of benzene respectively in this quarter. The next highest benzene reading from an on site well was 2.4ppb from C-2. Depth to ground water varied from 12.42 to 14.30 feet below grade with a direction of flow to the North.

From the results of this sampling, it appears that the remediation system, including sparging has been effective in removing significant levels of petroleum hydrocarbons constituents from the site. The Final Remediation Status Report and Request for No Further Action is being finalized by our consultant Terra Vac Corp., and will be forwarded shortly for your review. Chevron requests that monitoring wells C-4, C-6, C-7, C-8, C-9, MW-10, and MW-11 to be monitored annually for three years, and wells C-1, C-2, C-3, C-5, CR-1, and Mw-12 be monitored quarterly for one year than annually for two years. If at the end of that time, the hydrocarbon constituents continue to be decreasing, Chevron will request closer and removal of the wells. If you have any questions or comments, call me at (510) 842-9136.

Sincerely,  
CHEVRON PRODUCTS COMPANY

## 2nd Quarter 1996 Monitoring at 9-4816

Second Quarter 1996 Groundwater Monitoring at  
Chevron Service Station Number 9-4816  
301 14th Street  
Oakland, CA

Monitoring Performed on June 20, 1996

### Groundwater Sampling Report 960620-D-1

This report covers the routine quarterly monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

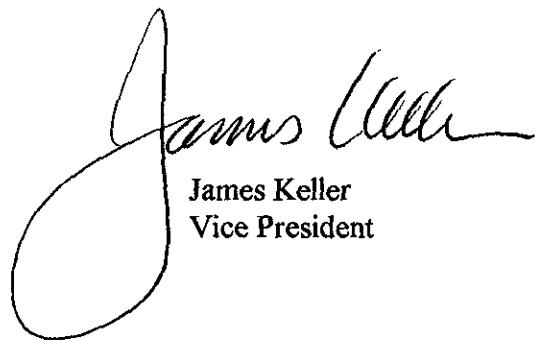

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

James Keller  
Vice President

Note: Blaine Tech Services, Inc. began routine monitoring of the groundwater wells at this site on November 1, 1994.

Earlier field data and analytical results are drawn from the September 27, 1994 Groundwater Technology, Inc. report.

 SEQUOIA ANALYTICAL

Peggy Penner  
Project Manager

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
