Subject: Self-Monitoring Report – Second Quarter 2009
Groundwater Remediation at 7101 Edgewater Drive, Oakland, California

Dear Ms. Gonzales:

The City of Oakland is pleased to submit this Self-Monitoring Report, Second Quarter 2009, for the groundwater extraction, treatment, and discharge system at the City of Oakland Municipal Services Center located at 7101 Edgewater Drive, Oakland, California. The report has been prepared by LFR Inc. and OTG Enviroengineering Solutions, Inc. under a consultant service contract with the City of Oakland. No violations of RWQCB Order No. R2-2006-0075 or NPDES Permit #CAG912002 were identified during this reporting period.

Certification

I certify under penalty of law that this document and attachments are prepared under my direction or supervision in accordance with the system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing the violations.

Please contact me at (510)238-6361 if you have questions or comments.

Sincerely

Gopakumar Nair
Environmental Program Specialist

Subject: Self-Monitoring Report – Second Quarter 2009
Groundwater Remediation at 7101 Edgewater Drive, Oakland, CA

Dear Mr. Nair:

OTG EnviroEngineering Solutions, Inc. (OTG) is pleased to submit this Self-Monitoring Report, Second Quarter 2009, for the groundwater extraction, treatment, and discharge system at the City of Oakland Municipal Services Center located at 7101 Edgewater Drive, Oakland, California. OTG conducted the work under a subcontract to LFR Inc. No violations of RWQCB Order No. R2-2006-0075 or NPDES Permit #CAG912002 were identified during this reporting period.

Certification

I certify under penalty of law that this document and all attachments are prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Please contact the undersigned at (510) 465-8982 if you have questions or comments.

Sincerely,

OTG EnviroEngineering Solutions, Inc.

Xinggang Tong, PhD, PE
Project Manager

1 INTRODUCTION

The City of Oakland Municipal Services Center (MSC) is located at 7101 Edgewater Drive in Oakland, California (the Site; Figure 1). The approximately 17-acre site was originally part of a waterfront tidal marsh complex that was filled between 1950 and 1971. The City of Oakland (the City) leased the land from the Port of Oakland and constructed the MSC around 1972. Bordering the MSC site to the west and the north is the Martin Luther King Regional Shoreline Park, which is also owned by the Port of Oakland. Damon Slough, which runs through the park, is located to the north, and commercial developments are located to the east and south.

The Site has been the subject of numerous environmental investigations beginning in about 1989. The suspected sources of on-site contamination include releases from underground storage tanks (USTs), gasoline and diesel fuel hydrant systems, and the floor drain waste collection pits formerly located adjacent to Building No. 5. At one time there were 14 petroleum USTs at the site. In addition, some or all of the material used to fill the Site may have been composed of waste material or contaminated fill. A comprehensive investigation conducted by Baseline Environmental Consulting (Baseline) in 2000 identified the existence of free-phase petroleum hydrocarbon product in four separate areas of the Site. These four areas are labeled Plumes A through D on Figure 2. Baseline's investigation is documented in its *Site History and Characterization Report* (Baseline, January 2001).

Groundwater monitoring was conducted quarterly from the fourth quarter of 1989 through the third quarter of 2002, and then semi-annually to the present. Shallow groundwater levels vary between approximately 2 and 10 feet below ground surface (bgs), and are partially subject to tidal influence. Throughout much of the Site, shallow groundwater flows to the southwest - to the nearest shoreline along San Leandro Bay. In the northern portion of the Site, groundwater flows in a more northerly direction toward the curving shoreline and Damon Slough.

Pilot-scale groundwater/soil vapor dual-phase extraction (DPE) tests were conducted in 2002 to assess enhancing the removal of free-phase petroleum product from Plumes A through D (Cambria Environmental Technology, August 13, 2002 and URS Corporation, August 29, 2002). Extracted groundwater was treated on-site through two 2,000-lb granular activated carbon units connected in series and discharged to the on-site storm drain in accordance with a National Pollutant Discharge Elimination System (NPDES) permit granted by the San Francisco Bay Regional Water Quality Control Board (NPDES Permit No. CAG912002). Based on the pilot test results, the City retained Cambria in May 2003 to design a full-scale product recovery and DPE system for Plumes C and D. Cambria's design was revised in October 2005 by Groundwater and Environmental Services (GES) to focus the first phase of product removal on Plume D. The final design drawings were included in Appendix A of the Startup Report (OTG, June 2006). Chemical oxidation and enhanced bioremediation through periodic injections of hydrogen peroxide have been implemented at Plumes A, B and C since July 2004.

In March 2006, the City retained URS Corporation and its subcontractor ERRG to construct GES' redesigned product recovery and DPE system in the Plume D area (first phase). A plan view of the system is presented in Figure 3. Construction was completed in early May 2006. Seven wells within Plume D area (RW-D1 through RW-D5, TBW-5, and RW-1) were connected to the extraction system. On May 22, 2006, the product recovery and groundwater extraction portion of the remediation system (pneumatic pumps) was turned on. On May 14, 2007, the DPE portion of the remediation system was turned on. The second phase included installation of six additional extraction wells (RW-D6 through RW-D11) within the Plume D area in March 2007 (URS, May 2007). They were connected to the DPE system and extraction from these wells commenced on June 11, 2007.

In March 2009, the City initiated the third phase of product removal by retaining LFR Inc. and its subcontractor All Chem Inc. to expand the DPE extraction to Plume C. Six of the eight wells in the Plume C area (RW-C2, RW-C4 through RW-C7, and OB-C1, Figure 3) were connected to the DPE system and extraction from these wells commenced on May 26, 2009.

2. DESCRIPTION OF REMEDIATION SYSTEM

The remediation system consists of extracting liquid (free-phase product and groundwater) and soil vapor from 13 wells in the Plume D area and six wells in the Plume C area, separation of free-phase product from groundwater, treatment of groundwater by activated carbon, discharge of treated water to the local storm drain in accordance with the NPDES permit, treatment of soil vapor, and discharge of treated vapor to the atmosphere in accordance with an air discharge permit. A process and instrumentation diagram of the remediation system is illustrated on Figure 4. Design details were included in Appendix A of the Startup Report (OTG, June 2006).

As described above, a total of 19 wells were connected to the remediation system in three phases: the first phase included seven wells in Plume D area (RW-D1 through RW-D5, TBW-5, and RW-1) and commenced extraction on May 22, 2006; the second phase included six additional wells in Plume D area (RW-D6 through RW-D11), which joined extraction on June 11, 2007; and the third phase included six wells in Plume C area (RW-C2, RW-C4 through RW-C7, and OB-C1), which joined extraction on May 26, 2009. Well locations are shown on Figure 3.

Wells RW-C1 through RW-C7 and RW-D1 through RW-D5 were constructed in December 2001 and wells RW-D6 through RW-D11 were constructed in March 2007, specifically for remediation purposes. Wells RW-1 and TBW-5 were installed during backfilling of the excavation of former fuel hydrant lines in the early 1990s. The first phase wells were equipped with both total fluid recovery pneumatic pumps specifically designed for viscous petroleum product recovery and vacuum lines for liquid and soil vapor extraction (dual-phase extraction, DPE). The pneumatic pumps were manufactured by Clean Environment Equipment in Oakland (Model # AP-Custom). An Ingersoll-Rand air compressor (model # SSR UP6-10) provides compressed air to the pneumatic pumps. The second and the third phase wells were connected only to the DPE system. A Dekker liquid-ring vacuum pump (model #VMX0553K) that can generate up to 28 inches of mercury vacuum and up to 550 actual cubic feet per minute

(ACFM) vapor flow provides necessary vacuum for the DPE system. The pneumatic pumps and the DPE extraction can be operated independently.

The liquid extracted by the pneumatic pumps and the DPE is pumped into an oil/water separator (Model # AGM-3SS-90V, Hydro Quip, Inc.). Recovered oil is contained in 55-gallon drums, which are sent to an off-site oil recycling facility. Groundwater is treated through three (3) granular activated carbon (GAC) units connected in series (Model #ASC-2000, U.S.Filter/Westates Carbons) before been discharged into local storm drain. Each GAC unit contains 2,000 pounds (lbs) of GAC. Figure 5 illustrates the groundwater treatment portion of the remediation system and identifies sampling ports. The groundwater treatment and discharge system is operated under the NPDES permit number CAG912002.

The soil vapor extracted from the 19 wells is abated by a thermal oxidizer, which is operated between 1,400 and 1,650 degrees Fahrenheit. At low vapor organic concentrations, the thermal oxidizer can be converted to a catalytic oxidizer. Activated carbon can also be used for vapor abatement at low organic concentrations. The vapor abatement system is operated under the permit number 16622 issued by the Bay Area Air Quality Management District (BAAQMD).

3 OPERATIONS AND MAINTENANCE

On May 22, 2006, the pneumatic pumps were turned on to initiate the remediation process. The vacuum extraction portion remained off line. Because the free-phase product appears to be a mixture of gasoline, diesel, and some other highly viscous organics (petroleum tank bottom or coal tar-like material), the vacuum extraction, if turned on, will vaporize gasoline and a portion of the diesel and will make the removal of the viscous product even more difficult. Therefore, the remediation scheme includes first using the pneumatic pumps to remove the free-phase product as much as is practical and achievable, and then using the vacuum extraction system to enhance the removal of the remaining petroleum hydrocarbons.

The volume of free-phase product recovered by the pneumatic pumps decreased steadily from the startup in May 2006 through April 2007. On May 14, 2007, RW-D2, RW-D4 and RW-D5 were switched to vacuum DPE operation, while RW-D1, RW-D3, TBW-5 and RW-1 remained under pneumatic pump extraction. On June 11, 2007, the six newly installed wells (RW-D6 through RW-D11) and the remaining pneumatic extraction wells (RW-D1, RW-D3, TBW-5, and RW-D5) were brought on-line under DPE operations. The pneumatic extraction portion of the remediation system was discontinued. On May 26, 2009, the six extraction wells from Plume C area (RW-C2, RW-C4 through RW-C7, and OB-C1) were also brought on-line under DPE operations.

The remediation system was operated intermittently during the second quarter 2009 due to extensive maintenance requirements. The highly viscous organic material extracted by the DPE system has progressively clogged various parts of the extraction piping and control system. The radiator was replaced in December 2008, the oil/vapor separation unit was changed in March 2009, and the oil level sensors and the vapor pressure switch were replaced

in April 2009. Routine operations and maintenance (O&M) of the system includes the following tasks:

- a daily check of the liquid level sensors and function of pumps;
- adjusting individual extraction wells to optimize the extraction rate of soil vapor and groundwater within the equipment design range;
- checking and removing oil from the oil/water separator;
- lubricating pumps;
- monitoring system performance;
- and other tasks necessary for maintaining proper functioning of the remediation system.

Monthly, quarterly, semi-annual, and annual groundwater and air samples were collected and analyzed from the system per the NPDES permit and the air permit requirement. Figure 5 shows sampling ports for groundwater sample collection. Air samples were collected from the exhaust and the inlet of the DPE system. Extracted groundwater was measured monthly on-site at the influent (prior to the carbon treatment) and at the effluent (after the carbon treatment) for temperature, pH, and electric conductivity using an Oakton pH/Con 10 meter (Serial #311648) and for turbidity using an Oakton T-100 meter (Serial #316738). Before measurement, the pH probe was calibrated with standard solutions of pH 4.00, 7.00, and 10.00; the electric conductivity probe was calibrated with 1413 ug/cm standard solution; and the turbidity meter was calibrated with standard solutions of 0.02, 20.0, 100, and 800 nephelometric turbidity units (NTUs).

Groundwater samples were analyzed by Curtis & Tompkins, Ltd of Berkeley, California, and air samples were analyzed by Torrent Laboratory, Inc., of Milpitas, California. Groundwater analytical methods are listed in Table 1. The laboratory data were found to be of acceptable quality, with qualifications as noted in the laboratory reports.

4 DISCHARGE MONITORING – SECOND QUARTER 2009

Field measured data and laboratory analysis results are summarized in the following tables:

- Table 1 – Laboratory Analytical Procedures;
- Table 2 – Operational Data and Field Measured Parameters;
- Table 3 – Petroleum Hydrocarbon Analytical Data;
- Table 4 – Inorganic Constituents Analytical Data & Fish Bioassay Results;
- Table 5 – Organic Constituents Analytical Data;
- Table 6 – Dual-Phase Extraction Vapor Monitoring Data;
- Table 7 – Petroleum Hydrocarbons Removed through Soil Vapor Extraction; and
- Table 8 – TPH removed through Groundwater Extraction, Floating Product Recovery, and Soil Vapor Extraction.

Significant Results for the Second Quarter 2009

- Groundwater extracted from the remediation wells for this reporting period (April 1 through June 30, 2009) totaled 170,450 gallons, which was treated and discharged into the local storm drain, resulting in an average monthly flow rate of 1.232 gallons per minute (gpm) in April, 1.989 gpm in May, and 0.765 gpm in June (Table 2).
- Separate-phase floating product was not recovered during this quarter. Approximately 22 lbs of total petroleum hydrocarbons (TPH, gasoline plus diesel) was removed through the extracted groundwater (dissolved in groundwater), and 491 lbs of TPH was removed through soil vapor (Table 8). The total weight of TPH removed this quarter was 513 lbs, of which 96% was removed by the DPE through soil vapor extracted and 4% was removed through the groundwater. Since the remediation system started in May 2006, a total of 58,457 lbs, or approximately 8,259 gallons, of TPH has been removed from Plume D (Table 8). The recovered floating product was highly viscous and black in color. Its appearance does not resemble gasoline or diesel.
- Monthly and quarterly monitoring was conducted on April 24, May 13, and June 10, respectively. Monthly monitoring results are summarized in Tables 2 and 3; quarterly and annual monitoring results are presented in Tables 4 and 5.
- Effluent (treated groundwater) had pH values between 7.02 and 7.3, temperatures between 20.6 and 23.8 °C, conductivities between 10.3 and 14.05 mS/cm, and turbidities between 2.0 and 3.0 NTU (Table 2).
- TPHg; TPHd; TPHmo; benzene, toluene, ethylbenzene, and xylenes (BTEX); and methyl tertiary-butyl ether (MTBE) in the monthly effluent samples were all below their respective reporting limits. The reporting limits were 0.5 micrograms per liter (ug/L) for the BTEX constituents, 2.0 ug/L for MTBE, 50 ug/L for TPHg and TPHd, and 300 ug/L for TPHmo (Table 3).
- Polycyclic aromatic hydrocarbons (PAHs by EPA Method 8310) in the quarterly effluent sample were below their respective reporting limits, which was 0.1 ug/L for many of the PAHs (Table 5).
- The average concentrations for the influent (after the oil/water separator, but before the carbon treatment) for the second quarter 2009 were 1.1 milligrams per liter (mg/L) TPHg, 13.7 mg/L TPHd, 1.8 mg/L TPHmo, and 0.016 mg/L benzene. These concentrations are significantly below their respective concentrations in 2006 and 2007 (Table 3).

Notes:											
1. pH, conductivity, and temperature were measured on site using an Oakton pH/Con 10 meter, serial #311648, calibrated daily before use.											
2. Turbidity was measured on site using an Oakton T-100 meter, serial #316738, calibrated daily before use.											
3. Monthly air samples are analyzed for TPHg and BTEX.											
Abbreviations:											
BTEX = benzene, toluene, ethylbenzene, and total xylenes											
Cr +6 = chromium-VI											
DIPE = diisopropyl ether											
EDB = ethylene dibromide											
EPA = U.S. Environmental Protection Agency											
ETBE = ethyl tertiary butyl ether											
MTBE = methyl tertiary butyl ether											
PAHs = polycyclic aromatic hydrocarbons											
SM = Standard Method											
SVOCs = semivolatile organic compounds											
TAME = tertiary amyl ether											
TBA = tertiary butyl alcohol											
TPHd = total petroleum hydrocarbons quantified as diesel											
TPHg = total petroleum hydrocarbons quantified as gasoline											
VOCs = volatile organic compounds

Table 2 - Operational Data and Field-Measured Parameters
 City of Oakland Municipal Services Center Groundwater Remediation Project

Date	Time	Effluent (E-1)				Influent (I-1)			Btw-1	Btw-2	Totalizer Reading (gallons)	Monthly Treated (gallons)	Monthly Ave. Rate (gpm)	Cumulative Floating Product Recovered (gallons)	Notes	
		pH	Temp. (°C)	E. cond. (mS/cm)	Turbidity (NTU)	pH	Temp. (°C)	E. cond. (mS/cm)								

Abbreviations:

"--" indicates no value obtained for given field

°C = degree Celsius

DPE = dual-phase extraction

gpm = gallon(s) per minute

mS/cm = millisiemen(s) per centimeter

NTU = nephelometric turbidity unit

OR = sample was out of range (>19.99 mS/cm)

Table 3 - Petroleum Hydrocarbon Analytical Data
 City of Oakland Municipal Services Center Groundwater Remediation Project

Notes:							Abbreviations:						
(a1) - false positive detection, confirmed ND on 6/2/06 with samples at E-1, Btw-1, and Btw-2							"--" indicates not analyzed for constituent indicated						
(a) - Presence confirmed, but RPD between columns exceeds 40 percent							MTBE = methyl tertiary butyl ether						
(a2) - false positive detection, confirmed ND after the first carbon unit							µg/L = microgram(s) per liter						
(a2a) - false positive detection, confirmed ND with 9/5/06 sample							ND () = non-detected lab values						
(h) - heavier hydrocarbons contributed to the quantitation							TPHd = total petroleum hydrocarbons quantified as diesel						
(l) - lighter hydrocarbons contributed to the quantitation							TPHg = total petroleum hydrocarbon quantified as gasoline						
(y) - sample exhibits chromatographic pattern that does not resemble standard							TPHmo = total petroleum hydrocarbon quantified as motor oil						
(z) - sample exhibits unknown single peak or peaks													
* - Sample analytical result for TPHd was erroneously switched between Btw-1 and Btw-2 in the laboratory report, due to mislabeling in the field.

Notes:

(h) - heavier hydrocarbons contributed to the quantitation

(l) - lighter hydrocarbons contributed to the quantitation

(y) - sample exhibits chromatographic pattern which does not resemble standard

* - Sample analytical results for TPH-d were erroneously switched between Btw-1 and Btw-2 in the laboratory analytical reports due to mislabeling in the field.

Abbreviations:

"--" indicates not analyzed for constituent indicated	PAHs = polycyclic aromatic hydrocarbons
DIPE = diisopropyl ether	SVOCS = semivolatile organic compounds
EPA = U.S. Environmental Protection Agency	TAME = tertiary amyl ether
ETBE = ethyl tertiary butyl ether	TBA = tertiary butyl alcohol
$\mu\text{g/L}$ = microgram(s) per liter	TPHd = total petroleum hydrocarbons quantified as diesel
MTBE = methyl tertiary butyl ether	TPHg = total petroleum hydrocarbons quantified as gasoline
ND () = non-detected lab value	VOCs = volatile organic compounds

Table 6 - Dual-Phase Extraction Vapor Monitoring Data
City of Oakland Municipal Services Center Groundwater Remediation Project

Notes:

Note (1) - Measured at the discharge side of the vacuum pump, the pressure is approximately 1.05 atm.

Note (2) - POC = precursor organic compound measured as TPH volatiles in vapor.

Note (3) - The flow sensor was coated with highly viscous material and resulted in inaccurate readings; vacuum readings were much more stable and accurate.

Abbreviations:

-- indicates no value obtained for given field

$^{\circ}\text{F}$ = degree Fahrenheit

acfm = actual cubic foot per minute

atm = standard atmosphere

DPE = dual-phase extraction

Notes:

Flow rates from May through August 2007 were recorded by the flow meter at the vacuum discharge side.

Flow rates after August 2007 were based on pump vacuum reading and pump performance chart for acfm.

Abbreviations

"--" indicates not analyzed for constituent indicated

acf m = actual cubic foot per minute

atm = standard atmosphere

DPE = dual-phase extraction

°F = degree Fahrenheit

hr = hours(s)

lb = pound(s)

m³ = cubic meter

mg/m³ = milligram(s) per cubic meter

ppmv = parts per million volume

scfm = standard cubic foot per minute

TPHg = total petroleum hydrocarbons quantified as gasoline

Table 8 - TPH Removed through Groundwater Extraction, Floating Product Recovery, and Soil Vapor Extraction
City of Oakland Municipal Services Center Groundwater Remediation Project

Note: Morgan Environmental disposed of three 55-gallon drums of recovered product on 8/9/06 and four 55-gallon drums of product on 8/17/07.

Non-detected lab values were reported as half the reporting limit in equations.

Abbreviations:

lb = pounds(s)

mg/L = milligram(s) per liter

TPH = total petroleum hydrocarbons

TPHg= total petroleum hydrocarbons quantified as gasoline

TPHd= total petroleum hydrocarbons quantified as diesel

I-1	211698-003

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures. The results contained in this report meet all requirements of NELAC and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

Signature: Troy Baker
Project Manager

Date: 05/06/2009

Signature: Jeanne R. Baker
Senior Program Manager

CASE NARRATIVE

Laboratory number: **211698**
Client: **OTG Enviroengineering Solutions, Inc**
Project: **090AK04.1000**
Location: **MSC Remediation**
Request Date: **04/24/09**
Samples Received: **04/24/09**

This data package contains sample and QC results for three water samples, requested for the above referenced project on 04/24/09. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

High surrogate recoveries were observed for bromofluorobenzene (PID) in a number of samples. High surrogate recovery was observed for trifluorotoluene (PID) in I-1 (lab # 211698-003). No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

CASE NARRATIVE

Laboratory number: **212118**
Client: **OTG Enviroengineering Solutions, Inc**
Project: **090AK04.1000**
Location: **MSC Remediation**
Request Date: **05/13/09**
Samples Received: **05/13/09**

This data package contains sample and QC results for three water samples, requested for the above referenced project on 05/13/09. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

High response was observed for MTBE in the CCV analyzed 05/22/09 20:21; affected data was qualified with "b". No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

1. Did cooler come with a shipping slip (airbill, etc) _____ YES NO
 Shipping info _____

- 2A. Were custody seals present? ... YES (circle) on cooler on samples NO
 How many _____ Name _____ Date _____
 2B. Were custody seals intact upon arrival? _____ YES NO N/A
 3. Were custody papers dry and intact when received? YES NO
 4. Were custody papers filled out properly (ink, signed, etc)? YES NO
 5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO
 6. Indicate the packing in cooler: (if other, describe) _____

Bubble Wrap Foam blocks Bags None
 Cloth material Cardboard Styrofoam Paper towels

7. Temperature documentation:

Type of ice used: Wet Blue/Gel None Temp(°C) _____

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? _____ YES NO
 If YES, what time were they transferred to freezer? _____
 9. Did all bottles arrive unbroken/unopened? YES NO
 10. Are samples in the appropriate containers for indicated tests? YES NO
 11. Are sample labels present, in good condition and complete? YES NO
 12. Do the sample labels agree with custody papers? YES NO
 13. Was sufficient amount of sample sent for tests requested? YES NO
 14. Are the samples appropriately preserved? YES NO N/A
 15. Are bubbles > 6mm absent in VOA samples? YES NO N/A
 16. Was the client contacted concerning this sample delivery? _____ YES NO
 If YES, Who was called? _____ By _____ Date: _____

CASE NARRATIVE

Laboratory number: **212761**
Client: **OTG Enviroengineering Solutions, Inc**
Project: **090AK04.1000**
Location: **MSC Remediation**
Request Date: **06/10/09**
Samples Received: **06/10/09**

This data package contains sample and QC results for three water samples, requested for the above referenced project on 06/10/09. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Polynuclear Aromatics by HPLC (EPA 8310):

No analytical problems were encountered.

7. Temperature documentation:

Type of ice used: Wet Blue/Gel None Temp(°C) 2

Samples Received on ice & cold without a temperature blank

Samples received on ice directly from the field. Cooling process had begun.

8. Were Method 5035 sampling containers present? **YES** **NO**

If YES, what time were they transferred to freezer?

9. Did all bottles arrive unbroken/unopened? YES NO

10. Are samples in the appropriate containers for indicated tests? YES NO

11. Are sample labels present in good condition and complete? YES NO YES NO

12. Do the sample labels agree with custody papers? YES NO

13. Was sufficient amount of sample sent for tests requested? YES NO

13. Was sufficient amount of sample sent for tests requested? YES NO
14. Are the samples appropriately preserved? YES NO

15 Are bubbles \geq 6mm absent in VOA samples? YES NO N/A

15. Are babies > 6mth absent in VOA samples? YES NO N/A

16. Was the client contacted concerning this sample delivery? _____ YES NO
If YES, Who was called? _____

If YES, who was called? _____ By _____ Date: _____
