Fuel Leak Case No. RO0000304

Dear Mr. Chan:

On behalf of Mr. Hooshang Hadjian, Pangea Environmental Services, Inc. (Pangea) has prepared this *Soil and Water Investigation Work Plan - Addendum* (addendum) for the subject site. You requested this work plan addendum during our meeting on January 6, 2006.

Based on our discussion of the site conditions and regulatory concerns, Pangea recommends installing four more wells than proposed in the work plan. Pangea recommends installing two monitoring wells in the middle water-bearing zone (MW-6B and MW-7B), which had originally been presented as 'optional' wells. Pangea also proposes two additional monitoring wells in the deeper water bearing zone (MW-9C and MW-10C). These new additional wells will facilitate more complete assessment of the site subsurface in the vertical and lateral directions, and could assist with any future feasibility testing or site remediation. The proposed well locations from the work plan and this addendum are shown on the attached and revised Figure 10. These wells will be screened and installed as discussed by the work plan for middle and deeper water-bearing zone wells.

Upon approval by the ACEH, Pangea will implement the workplan and addendum. As you review this addendum, please reference my email from January 20, 2006, which recommends analyzing future groundwater well samples for fuel oxygenates and addresses the repair of well vault EA-1.

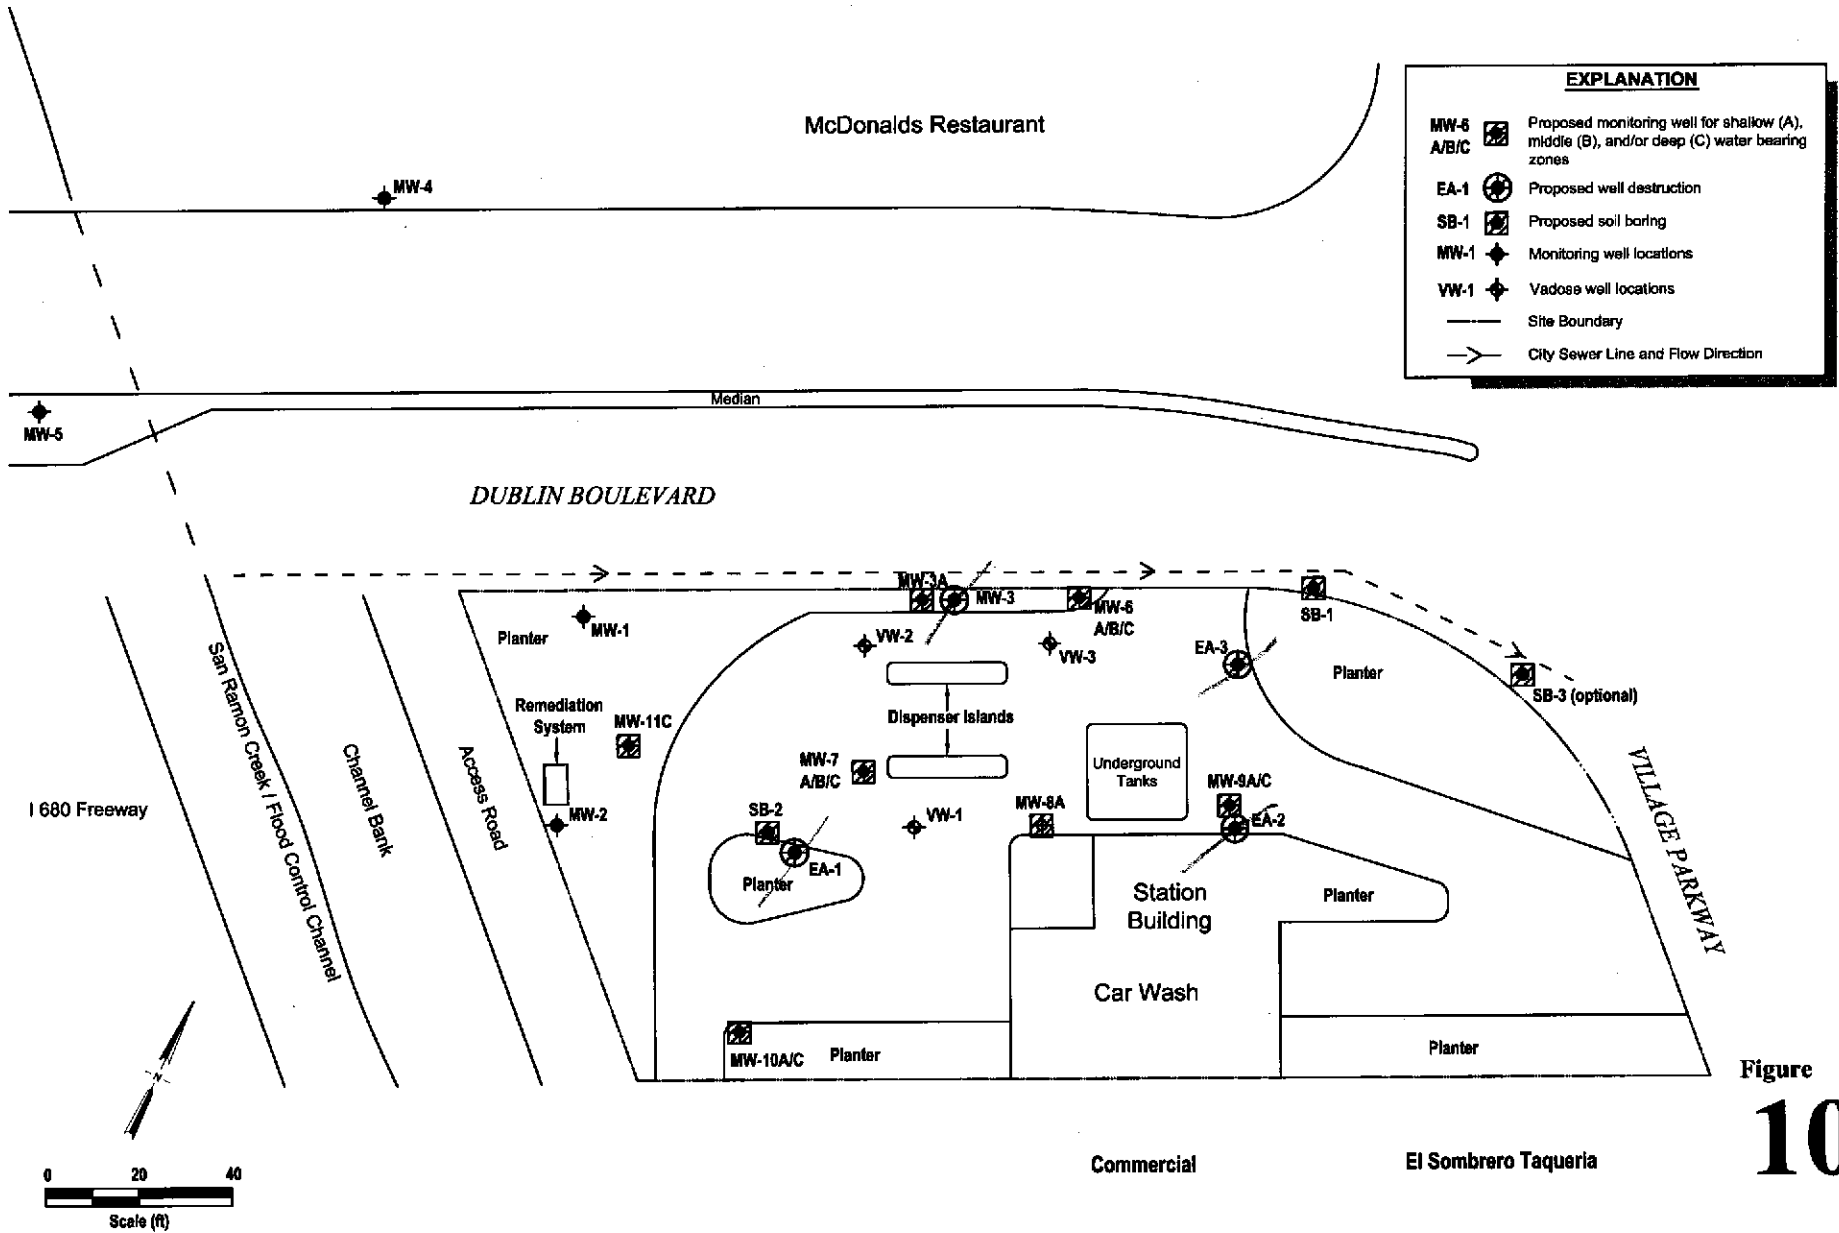

Thank you for your assistance with this case. If you have any questions, please call me at (510) 435-8664 or email briddell@pangeaenv.com.

Sincerely,
Pangea Environmental Services, Inc.

Bob Clark-Riddell, P. E.
Principal Engineer
