APPENDIX B: CHAIN OF CUSTODY and LABORATORY ANALYTICAL RESULTS

1.0 INTRODUCTION

This report documents the sampling and analyses of water from six (6) groundwater monitoring wells on 11 January 2002 and on 19 March 2002, as well as the grab-sampling and analysis of three soil samples on 9 January 2002. The site location is shown in Figure 1.

2.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Many investigations of soil and groundwater contamination have been conducted on this site, during the past decade. There has not been time to recount them for this report; however, a summary of groundwater analytical results for the years 1992 to 1998 for 18 monitoring wells is included in Appendix A. Figure 2 shows the locations of wells listed in Table A-1. This table indicates that, as of 1998, TPHg (total petroleum hydrocarbons as diesel) was still present in 15 of the monitoring wells, while TPHd (total petroleum hydrocarbons as diesel) was detected in only five wells; and TPHmo (total petroleum hydrocarbons as motor oil) was detected in only four wells. One or more of the four aromatics BTEX (benzene, toluene, ethylbenzene, and xylenes) were detected in nine wells in trace amounts (with benzene concentrations 0.5 to 1.0 ppb), and in somewhat larger concentrations (2 to 22 ppb) in three wells. MTBE was detected in four wells and VOCs only in one well (out of two tested). Vinyl chloride was not detected in any well.

3.0 SCOPE OF SERVICES

3.1 Soil Sampling

The scope of services for this project included the collection and analysis of three soil samples during site demolition/ construction using an onsite excavator. On January 9, 2002 samples were collected from that portion of the uppermost three-inches of soil constituting the most contaminated soil in the backhoe bucket, based on soil odor or discoloration. The samples were analyzed for total petroleum hydrocarbons as diesel fuel and motor oil, as well as total lead.

3.2 Well Development and Groundwater Sampling

The scope of services included purging, sampling and analysis of six wells (MWs 3, 4, 5, 6A, 9 and 10), although MW-4 could not be located and therefore was not sampled. MWs 5, 6A, 9 and 10 were sampled on 11 January 2002 and MW-3 was sampled on 19 March 2002. Locations of these wells are shown in Figure 2. The wells were purged by using a clean stainless steel bailer (1.0-inch diameter by 3.0-foot length). The purged water was placed in a DOT 17, 55-gallon drum for disposal labeled and contained pending receipt of laboratory results on groundwater samples. Disposal will conform to applicable hazardous waste requirements. Depths to water were gauged by using an electronic gauge prior to purging the well. At consistent intervals throughout the sampling event, groundwater parameters (pH, conductivity, and temperature) were monitored to evaluate stabilization of the well. Upon stabilization of these parameters a groundwater sample was collected. Depths to water and to bottom of well are shown in Table 1.

Table 1. Depths of Wells and Depths to Water

Well	DTW(FT)	DOW(FT)
MW-3	4.16	10.10
MW-5	4.02	11.03
MW-6A	4.24	10.48
MW-9	3.57	13.30
MW-10	5.84	10.21

DTW, DOW – depth to water, depth of well

Groundwater samples were collected using a clean disposable bailer, after purging the well with a clean stainless steel bailer. Collected water samples for each well were decanted into two one-liter amber bottles and two 40-ml volatile organics analysis vials (VOAs) to a positive meniscus, eliminating headspace. The groundwater samples were labeled with the date, sampler's name, project name, well number, and analysis required. The samples were then placed in sealed plastic bags on ice within a cooler and maintained at temperature of 4 degrees Fahrenheit and then transported to a state certified analytical laboratory under chain of custody. Each sample's temperature was measured immediately upon receipt by the laboratory.

3.3 Soil Analytical Results

Soil samples collected for analysis were transported to a certified hazardous waste analytical laboratory and analyzed for the total petroleum hydrocarbons as diesel (TPHd) and as motor oil (TPHmo) using EPA Method 8015 M, both using silica gel recovery. In addition, total lead (EPA Method 6010) was analyzed. These results are given in Table 2.

Table 2. Soil Analytical Results, 9 January 2002

Sample #	TPHd	TPHmo	Total Lead
Units	mg/kg (ppm)		
1	<10	<50	5.8
2	120	550	250
3	20	130	85

3.4 Groundwater Analytical Results

Groundwater samples collected for analysis were transported to a certified hazardous waste analytical laboratory and analyzed for the total petroleum hydrocarbons as diesel (TPHd, using EPA Method 8015M), halogenated hydrocarbons (using EPA Method 8260B), and dissolved CAM-17 metals (EPA Methods 6000 and 7000 Series). HVOCS (halogenated volatile organics, EPA method 8260) were analyzed in samples from wells 6A and 9, and none of the analytes of this test were detected. Dissolved lead was analyzed in samples from MW-5 and MW-10. Results for TPHd, for dissolved lead, and for the eight metals detected (in the CAM-17 dissolved metals test) are presented in Table- 3. The metals are designated according to the standard nomenclature.

Table 3. Groundwater Analytical ResultsSampled on 11 January 2002^(1,2)

Units µg/L (ppb)

MW#	TPHd	Lead (Pb)	Dissolved CAM-17 metals ⁽³⁾							
			As	Ba	Co	Cr	Cu	Ni	Se	Va
3	<50	NDcam ⁽⁴⁾	Not analyzed							
5	1,100	12.8								
6A	250	NDcam ⁽⁴⁾	ND	109	1.69	1.67	2.26	6.35	1.31	ND
9	2,000	NDcam ⁽⁴⁾	3.82	110	ND	1.60	24.6	6.15	1.03	1.46
10	330	ND	Not analyzed							

1 – MW-3 was sampled 19 March 2002

2 – MW-6A and MW-9 were analyzed for HVOCs and none were detected

3 – the other 9 metals in CAM-17 were not detected in MW-6A and -9

4 – NDcam⁽⁴⁾ – tested non-detect in CAM17, ND-not detected in dissolved lead analysis

3.5 Summary and Recommendations

Excepting well MW-5, no known toxic chemicals or metallic ions at unusually high concentrations were observed in the wells tested for this report. The sample from MW-5, however, indicated total lead of 12.8 µg/L. It is understood that the lead agency, Alameda County, Department of Environmental Health Services, may require further sampling and reporting of monitoring wells on the site, although the scope of that effort has not yet been determined.

Total lead was detected in soil samples# 1, 2, and 3 at 5.8 ppm, 85 ppm, and 250 ppm respectively. These samples were collected within the proposed garden area.. It is our recommendation that human exposure and health risk be evaluated.

4.0 RELEASE REPORTING

As requested, a copy of this report was forwarded to the Alameda County Department of Environmental Health Services, Hazardous Materials Division. This address is provided for your records.

ppm parts per million

< Analyte not detected at or above stated detection limit

(1) Lubricating oil can not be qualitatively identified by type of oil because of chromatographic likeness of different oil types. Due to non-volatility of certain oils, much of the oil present may never be quantified by this gas chromatographic method. Quantitation obtained for lubricating oil by this method should, therefore, be treated as an estimate. This method quantifies lubricating oil against 10-W-40 standards. For the most accurate analysis of lubricating oil, an infrared method is recommended.

(2) Water sample also analyzed for Freon 113 by EPA Method 8010A. Results were below the detection limit of 1.0 $\mu\text{g/L}$.

(3) Qualitative identification is uncertain because the material present does not match laboratory standards.

(4) Quantitative uncertain due to matrix interferences

(5) Tetrachloroethene

Helen Mawhinney, Project Manager
Environmental Technical Services
1548 Jacob Ave.
San Jose, CA 95118

Dear Ms. Hawhinney:

Included are the results from the testing of material submitted on January 17, 2002 from your 2415 Mariner Sq. project. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Charlene Morrow

CASE NARRATIVE

This case narrative encompasses samples received on January 17, 2002 by Friedman & Bruya, Inc. from the Environmental Technical Services 2415 Mariner Sq. project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Technical Services</u>
201101-01	#1
201101-02	#2
201101-03	#3
201101-04	MW-5
201101-05	MW-6A
201101-06	MW-9
201101-07	MW-10

All quality control requirements were acceptable.

Samples MW-6A and MW-9 were sent to North Creek Analytical for dissolved CAM 17 metals analysis, and samples MW-5 and MW-10 were sent for dissolved lead analysis. The reports generated by NCA will be forwarded to your office upon receipt.

Date of Report: 01/31/02

Date Received: 01/17/02

Project: 2415 Mariner Sq.

Date Extracted: 01/23/02

Date Analyzed: 01/24/02

**RESULTS FROM THE ANALYSIS OF THE SOIL SAMPLES
FOR TOTAL PETROLEUM HYDROCARBONS**

AS DIESEL AND MOTOR OIL

USING EPA METHOD 8015M

**Sample Extracts Passed Through a
Silica Gel Column Prior to Analysis**

Results Reported as µg/g (ppm)

<u>Sample ID</u> Laboratory ID	<u>Diesel Range</u> (C ₁₀ -C ₂₆)	<u>Motor Oil Range</u> (C ₂₅ -C ₃₆)	Surrogate (% Recovery) (Limit 51-153)

ENVIRONMENTAL CHEMISTS

CASE NARRATIVE

This case narrative encompasses samples received on March 20, 2002 by Friedman & Bruya, Inc. from the Environmental Technical Services Mariner Square project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>Environmental Technical Services</u>
203154-01	MW-3

All quality control requirements were acceptable.

The sample was sent to North Creek Analytical for dissolved lead analysis. Review of the enclosed report indicates that all quality assurance was acceptable.
