Paul,
Thanks for the revised Figure 2. I think the revised locations you've proposed are not unreasonable and should (are likely to?) provide some useful data that move the site further along its path. That said, I do think that it would be very appropriate to add a sub-slab point inside the building near E-4 (close to where the original work plan proposed SS-1 was located, but inside the building area). This is especially warranted since E-4 had among the highest post remedial benzene vapor concentrations, and it would be good to verify that vapor intrusion, or remediation is, or is not, affecting this portion of the building. Let me know if you have questions. A hand sketch is fine for documenting these final modifications.

Dear Mark.

Due to the holiday season, I have not been able to firmly confirm the revised RI locations, but wanted to submit this to you now to confirm that these proposed revised draft locations are okay with you. Your November letter proposed technical exchange of the proposed changes by email, so I marked up by hand the proposed locations for your easier review. These can then be drafted in more formal format.
