GROUNDWATER MONITORING REPORT  
Sampling Round Fourteen

PACO PUMPS, INC.  
9201 San Leandro Street  
Oakland, California  
December 6, 1996

## 1.0 INTRODUCTION

Jonas and Associates Inc. (J&A) has been retained by PACO Pumps Inc. (PACO or PACO Pumps) to perform the groundwater monitoring program at their former property located at 9201 San Leandro Street, in Oakland, California 94603-1237. To date, fourteen groundwater sampling rounds have been performed at this facility. The first thirteen sampling rounds were presented in previous documents, identified in Section 4.0 References. This report presents the results of the fourteenth groundwater sampling round, performed on November 4, 1996.

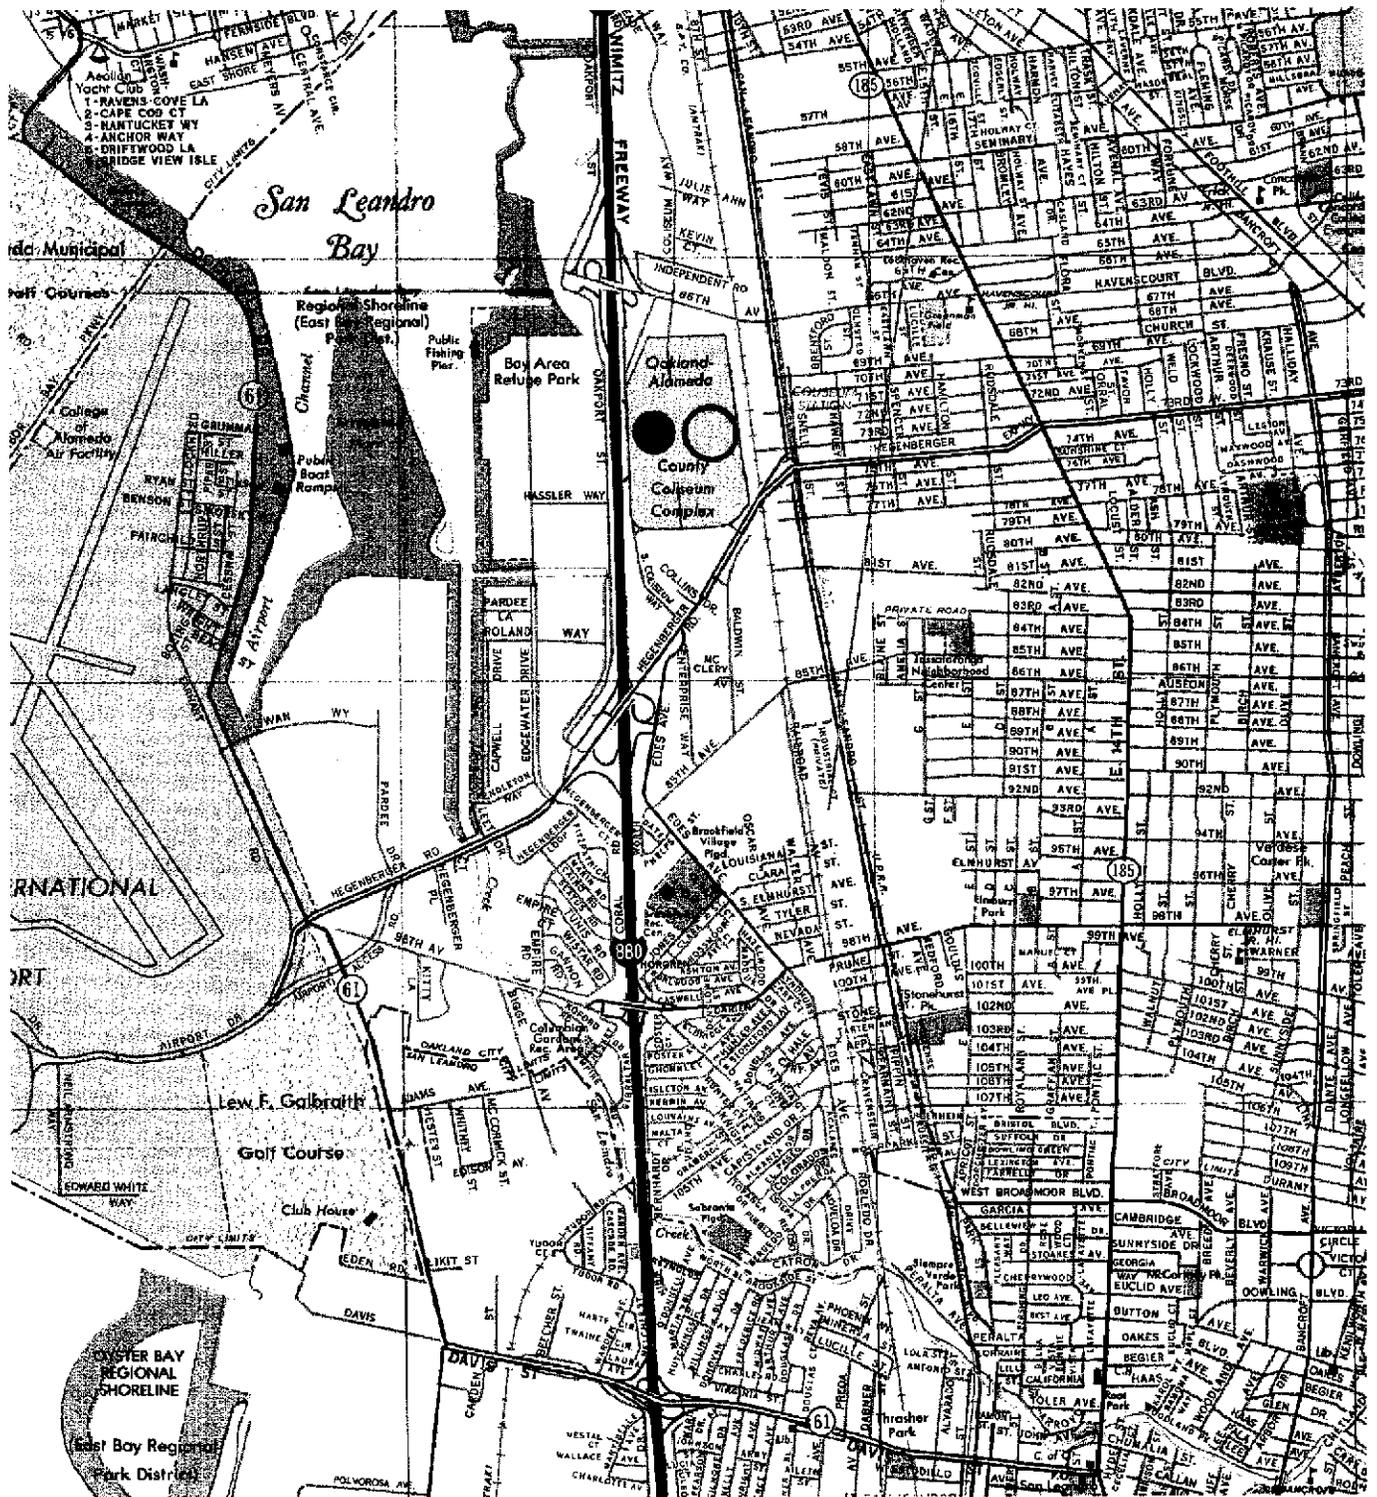

PACO Pumps' environmental representative for this project is Mr. John Lilla {(512) 314-8500}. The lead agency for this project is the Alameda County Health Care Services Agency, Department of Environmental Health, Hazardous Division (Alameda County Health Services). The address of Alameda County Health Services is 1131 Harbor Bay Parkway, 2nd Floor, Alameda, California 94502. The agency representative is Ms. Eva Chu {(510) 567-6762}.

### 1.1 Site Description

The PACO Pumps former facility presented in this report is located at 9201 San Leandro Street, in Oakland, California. Prior to May 1992, PACO Pumps had an active facility at this location. The facility contained a manufacturing, engineering, and storage building, a purchasing and data processing building, a warehouse, a welding shop, employee parking, and outside storage. Apparently, the property also had two underground tanks used for the storage of gasoline. The property is largely secured by a Cyclone fence and gates. PACO Pumps closed this facility and removed its equipment. Currently, this property is owned by a local company which primarily uses it to warehouse glassware.

The regional location of the property is presented in Figure 1-1. The facility is located in Township 2 South, Range 3 West, Section 22, Mount Diablo Baseline and Meridian. The land is essentially flat. Prior to moving, PACO Pumps' Environmental Protection Agency identification number for the facility was CAD088772629.

## 1.2 Scope of Report

This "Groundwater Monitoring Report, Sampling Round Fourteen" is presented in four sections and three appendices. Section 1, Introduction, provides a brief description of the site and the scope of the report. Section 2, Monitoring Wells and Hydrogeology, presents general well construction details for the five monitoring wells, the results of elevation and location surveys, and a local hydrogeologic cross-section. Section 3, Groundwater Sampling and Analysis, presents Round Fourteen groundwater sampling procedures and results, along with water level and free product measurements. Section 4, References, presents document references. The appendices of the report include groundwater analysis summary tables, chain-of-custody records, and laboratory data sheets.

## 2.0 MONITORING WELLS AND HYDROGEOLOGY

This section of the report presents a brief history and construction details for the five monitoring wells located at the 9201 San Leandro Street former PACO Pumps' facility. In addition, a summary of the location and elevation surveys performed by Kier & Wright is provided. A local hydrogeologic cross-section is also presented using lithologic logs from on-site monitoring well boreholes.

### 2.1 Monitoring Wells

Five monitoring wells are located at the former PACO Pumps' facility. Four of these monitoring wells were drilled and installed during a period from November 3 through November 9, 1992. The J&A February 1993 "First Quarterly Status Report, PACO Pumps, 9201 San Leandro Street" presents the installation details and the rationale for locating and sampling each of the monitoring wells. Monitoring well 9MW5 was drilled and installed on August 12, 1994. The installation details and rationale for monitoring well 9MW5 are presented in the J&A August 1994 "Groundwater Monitoring Report, Sampling Round Six, PACO Pumps, 9201 San Leandro Street, Oakland, California". All of the monitoring wells are screened at an apparently transmissive fine sand to silty clay found underneath the facility. Figure 2-1 presents the locations of the five monitoring wells, the Round Fourteen analyses performed at each well, the previous excavation site, suspected former underground storage tank locations, Saint Vincent DePaul, and other on-site structures.

#### 2.1.1 Construction Details

All of the five monitoring wells are constructed in boreholes drilled to depths of 21 feet. One pilot borehole next to monitoring well 9MW3 was drilled down to a depth of 30 feet to collect lithologic samples for analyses. Each of the five monitoring wells have a fifteen foot well screen set between approximately 5 to 20 feet below ground surface (bgs). The wells have a casing and screen diameter of four inches, placed in an 8½ inch borehole.

Monitoring well 9MW1 was constructed on November 4, 1992. The well was installed in a western corner of the facility adjacent to the former manufacturing building, and next to a transformer and the Central Pacific Railroad track. The lithology encountered during drilling ranged from an apparent fill, comprised of a silty gravel to a gravelly sand clay, to a sandy clay between 5 and 21 feet bgs. During drilling, first water was encountered at an approximate depth of 16 feet bgs. Measurement of first water is only approximate because of the difficulty in identifying water while drilling with a hollow stem auger. After the screen was installed, the well water level was measured at 9.74 feet bgs on November 15, 1992.

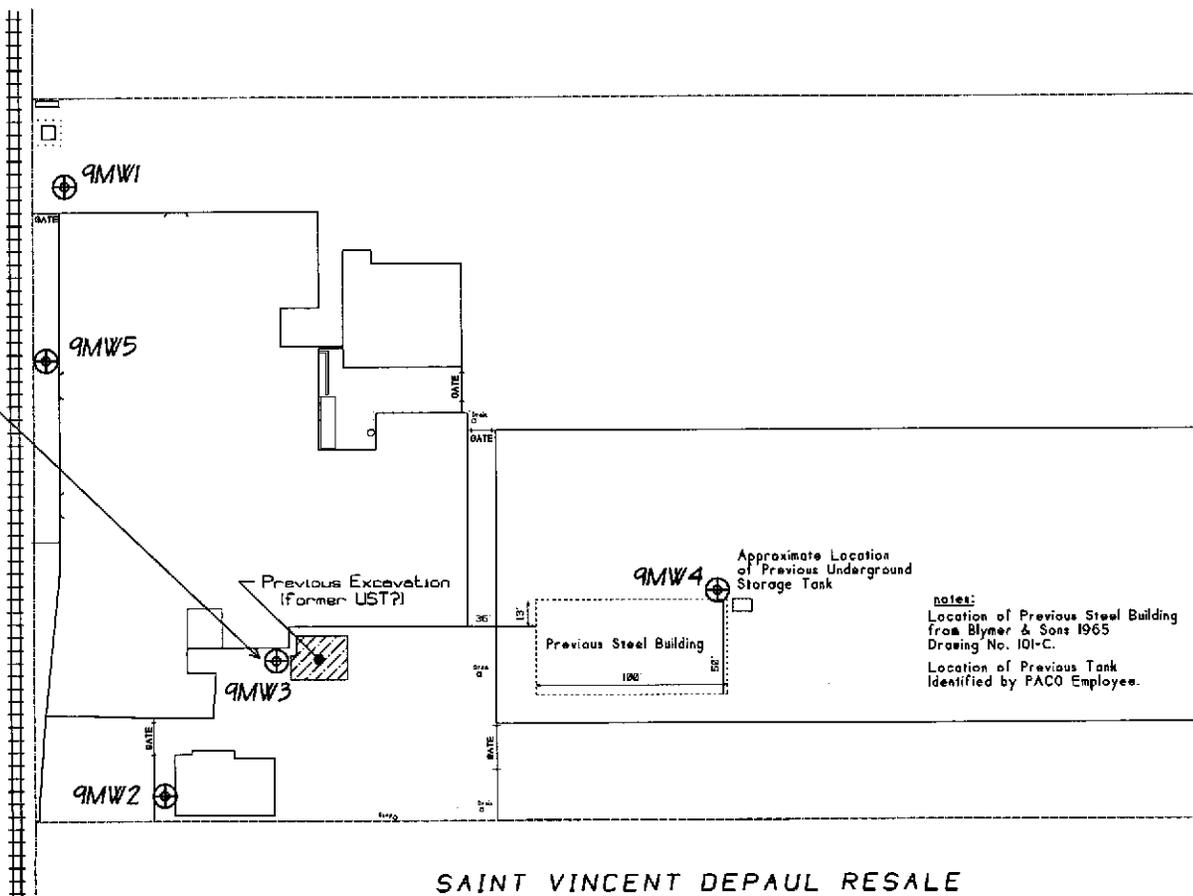

Monitoring well 9MW2 is located adjacent to the former welding shop and next to the Saint Vincent DePaul fence line. The well was installed on November 3, 1992. The

lithology encountered during drilling was gravelly silty sand, probably a fill material, and a sandy clay located from 4 feet to the bottom of the borehole at 21 feet bgs. First water was not clearly identified. On November 16, 1992 water level in monitoring well 9MW2 was measured at 10.45 feet bgs.

Monitoring well 9MW3 is located adjacent to a previous excavation where a former underground storage tank may have been present. No tank was found, but remnants of a former tank appears to have been identified during the excavation. The tank was reportedly used to store gasoline. Excavation activities and results were documented in the October 16, 1992 "Site Characterization Report and Work Plan, PACO Pumps, 9201 San Leandro Street, Oakland, California". The well was drilled next to the excavation area and constructed on November 4, 1992. During drilling of the borehole for monitoring well 9MW3, the lithology encountered was 2 feet of an apparent fill composed of gravelly silty sand and a sandy clay between 2 and 21 feet bgs. A pilot boring adjacent to 9MW3 also found sandy clay between 20 and 30 feet bgs. First water was not definitively identified. After the construction of monitoring well 9MW3, the well water level was measured at 10.64 bgs. On May 31, 1995 Oxygen Release Compound (ORC) socks were placed in monitoring well 9MW3 to hopefully enhance in-situ bioremediation. Prior to collecting water quality samples in August 1995, the ORC socks needed to be extracted from the well. After some difficulty, Regenis and Gregg Drilling successfully removed the ORC socks on August 25, 1995. On August 29, 1995 new ORC socks were placed in the well. These were then replaced on February 29, 1996 with new ORC socks. On November 4, 1996 the ORC socks were removed from monitoring well 9MW3 by J&A, as endorsed in the Alameda County Health Care Services letter dated May 22, 1996.

Monitoring well 9MW4 was constructed on November 9, 1992. The location of the well is apparently near a former UST, which was said to have been located below the floor of the current warehouse. Prior to drilling the borehole for the monitoring well, 1¼ feet of flooring and sub-base was cored with a diamond-studded core barrel. The flooring and sub-base appears to be 6" of concrete, 6" of rock, and 3" of asphalt. Below the flooring and sub-base was a sandy clay down to a depth of 21 feet. During drilling, first water was identified at an approximate depth of 13.5 feet bgs. On November 16, 1992 well water was measured at 9.41 feet bgs.

Monitoring well 9MW5 was constructed on August 12, 1994. The well was installed adjacent to the southwest fence line of the facility and next to the former manufacturing building and the Central Pacific Railroad track. The lithology encountered during drilling ranged from a gravelly sandy clay to a sandy clay between 2 and 21 feet bgs. During drilling activities, depth to first water was not able to be clearly identified. After the screen was installed, the well water level was measured at 8.22 feet bgs on August 24, 1994.

The following Table 2-1 present a summary of construction details for monitoring wells 9MW1, 9MW2, 9MW3, 9MW4, and 9MW5.

Table 2-1  
Monitoring Well Construction Details

### 2.1.2 Monitoring Well Survey

During August 1993, monitoring wells 9MW1, 9MW2, 9MW3, and 9MW4 were surveyed by Kier & Wright Civil Engineers & Surveyors, Inc.. In September 1994 they surveyed monitoring well 9MW5. The locations of the wells were surveyed using the California State Coordinate System which identifies the well locations using Eastings and Northings, in feet. The monitoring wells were surveyed at a point representing the north side mark on top of the PVC casing. The survey was based on the City of Oakland Benchmark 721, located at 92<sup>nd</sup> Avenue and G Street. The following Table 2-2 presents the monitoring well survey results.

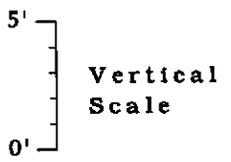

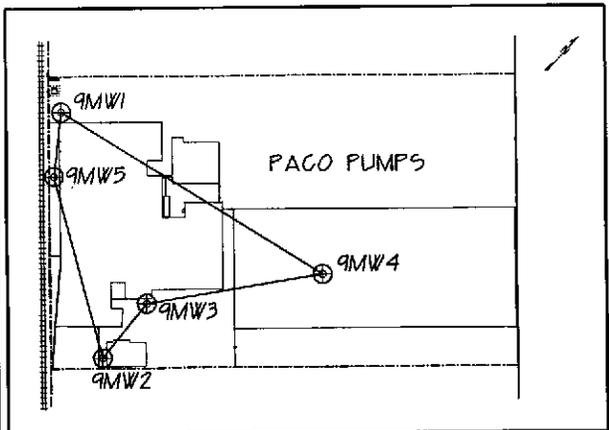

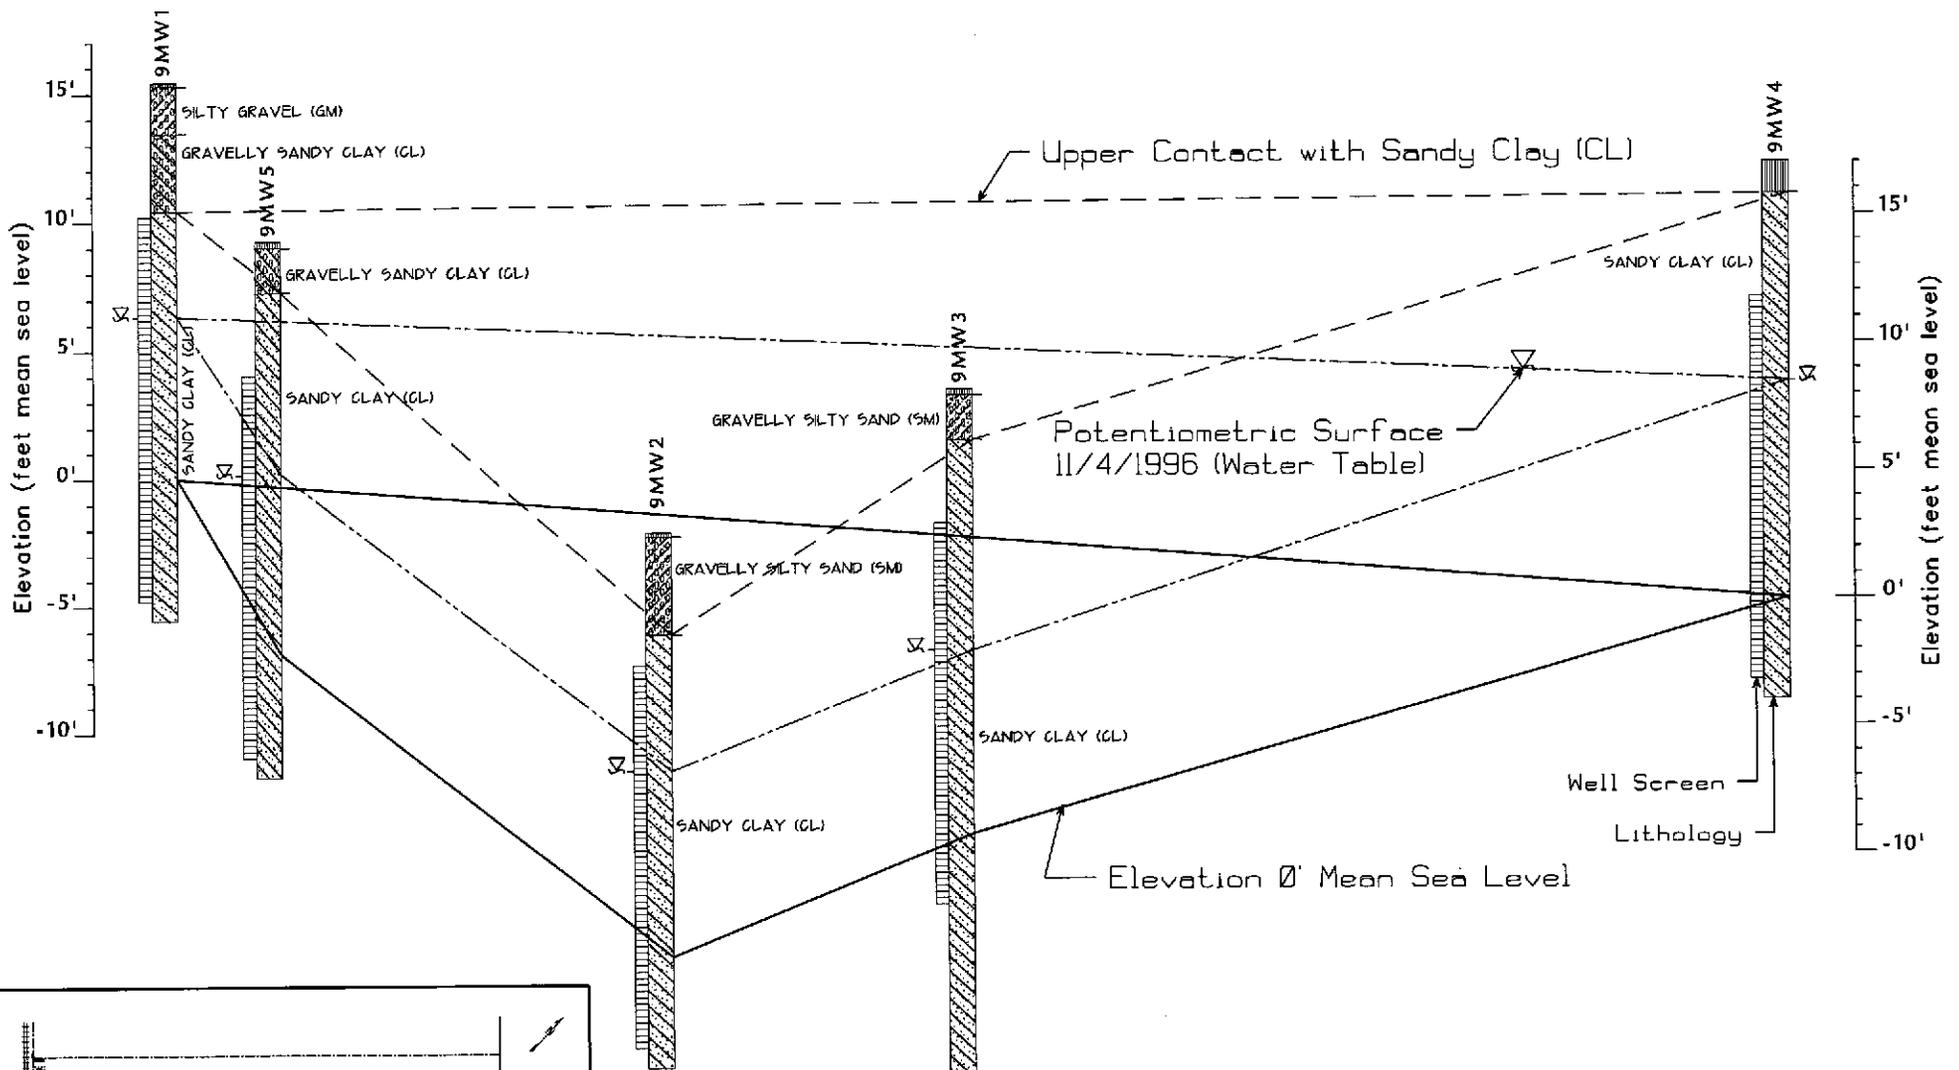

Table 2-2  
Monitoring Well Survey Data  
PACO PUMPS - 9201 San Leandro Street

Well	Easting	Northing	M.S.L. Elevation
9MW1	1512710.22	456699.01	Top PVC: 15.51'

### 3.0 ROUND FOURTEEN GROUNDWATER SAMPLING AND ANALYSIS

Following is a discussion of the procedures and results associated with Round Fourteen groundwater sampling of monitoring well 9MW3. Sampling for this round occurred on November 4, 1996 and represents fall seasonal conditions. Also included are Round Fourteen water level and free product measurements. A summary of all laboratory results from samples collected from the on-site monitoring well is presented in Appendix A. The chain-of-custody record for the November 4, 1996 Round Fourteen groundwater sampling event is presented in Appendix B. The laboratory data sheets associated with this sampling event are presented in Appendix C.

#### 3.1 Groundwater Sampling Procedures

The fourteenth round of groundwater sampling was performed on November 4, 1996 and represents fall groundwater conditions. During the sampling event, the general groundwater sampling procedures presented in the "Site Characterization Report and Work Plan" (J&A 1992) for the facility were followed. After samples were collected and labeled, they were placed into ice chests chilled with blue ice for transport to the Chromalab analytical laboratory. A chain-of-custody record was completed and signed by a representative of Jonas & Associates Inc., and upon delivery, by a representative of Chromalab Inc.. The analysis and results of groundwater samples collected during Round Fourteen are presented in Section 3.2. The following section presents relevant information associated with sampling and water level measurements:

##### Sampling Monitoring Well 9MW1

For this sampling round, no water quality samples were collected from monitoring well 9MW1. Water level in the well was measured at 9.20 feet below the top of the casing.

##### Sampling Monitoring Well 9MW2

For this sampling round, no water quality samples were collected from monitoring well 9MW2. Water level in the well was measured at 9.50 feet below the top of the casing.

##### Sampling Monitoring Well 9MW3

Prior to measurement of well water level and collection of water quality samples, socks containing the Oxygen Release Compound (ORC) were removed from the well. The ORC socks were placed in a D.O.T. 55 gallon drum, sealed, and labeled. After approximately one hour to allow for equilibrium of the water in the well, the water level in monitoring well 9MW3 was measured at 9.92 feet below the top of the casing. After measuring the depth to groundwater, a clear bailer was placed into the well to collect a water sample for visual observations. No floating product was identified. Prior to purging, two VOA containers with HCL were collected for analyses of TPH-G (EPA Methods 5030/8015M) and BTEX (EPA Method 8020). After approximately 22 gallons were purged from the well, two VOA containers with HCL were collected for analyses of TPH-G (EPA Methods 5030/8015M) and BTEX (EPA Method 8020). Two VOA

containers were also collected for analysis of Volatile Halogenated Organics (EPA Methods 8010A). During purging activities, recovery of the well was slow. The Round Fourteen groundwater samples for monitoring well 9MW3 are identified as GW9-MW3-Q14P and GW9-MW3-Q14.

#### Sampling Monitoring Well 9MW4

For this sampling round, no water quality samples were collected from monitoring well 9MW4. Water level in the well was measured at 8.50 feet below the top of the casing.

#### Sampling Monitoring Well 9MW5

For this sampling round, no water quality samples were collected from monitoring well 9MW5. Water level in the well was measured at 8.78 feet below the top of the casing.

### 3.2 Groundwater Sampling Results

This section of the report presents the analytical results for the Round Fourteen groundwater sampling event. Water level and free product measurements are also presented.

#### 3.2.1 Analytical Results

As stated previously, summary tables, the Round Fourteen chain-of-custody records and laboratory data sheets are presented in Appendix A, B, and C, respectively. The following Table 3-1 present a summary of the analyses performed and the analytes detected during the Round Fourteen groundwater sampling event. Figure 3-1 provides a graphical display of the analytical results.

8/28/1995	GW9-MW3-Q10P	1.4	ND(0.0005)	64
8/28/1995	GW9-MW3-Q10	4.8	2.500	20
11/29/1995	GW9-MW3-Q11P	3.0	0.780	18
11/29/1995	GW9-MW3-Q11	2.4	0.830	3
2/29/1996	GW9-MW3-Q12P	3.8	1.200	8
2/29/1996	GW9-MW3-Q12	8.0	3.400	2
5/23/1996	GW9-MW3-Q13P	6.900	3.300	59
5/23/1996	GW9-MW3-Q13	4.300	3.200	3
11/4/1996	GW9-MW3-Q14P	4.900	2.100	69
11/4/1996	GW9-MW3-Q14	4.500	2.100	35

For sampling rounds ten, eleven, twelve, thirteen, and fourteen TPH-Gasoline ranged from 1.4 to 8.0 mg/L and benzene ranged from 0.78 mg/L to 3.4 mg/L. The November 4, 1996 after purging sampling at 9MW3 detected TPH-Gasoline at 4.5 mg/L and benzene at 2.1 mg/L. Figure 3-2 presents a graphical display of TPH-Gasoline time-series results.

### 3.2.3 Results of Water Level and Free Product Measurements

During this sampling round, water level measurements from all five monitoring wells were recorded and a determination was made with respect to the presence or absence of a floating product for the one monitoring well that were sampled.

The following Table 3-3 provides a summary of the November 4, 1996 Round Fourteen groundwater level and free product measurements. Water level elevations, with respect to mean sea level, were calculated using the results of the Kier & Wright surveys.

PACO PUMPS - 9201 San Leandro Street  
Oakland, California

Date	Well ID	Surveyed Casing Elevation  M.S.L.	Water Level from Top of Casing		Pavement vs. Casing Top	Free Product
			Depth	Elevation M.S.L.		
11/4/1996	9MW1	15.51'	9.20'	6.31'	0.40'	not sampled
11/4/1996	9MW2	16.83'	9.50'	7.33'	0.40'	not sampled
11/4/1996	9MW3	17.13'	9.92'	7.21'	0.29'	no free product
11/4/1996	9MW4	17.08'	8.50'	8.58'	0.54'	not sampled
11/4/1996	9MW5	15.93'	8.78'	7.15'	0.25'	not sampled

Notes - > Elevation with respect to mean sea level (M.S.L.) and Kier & Wright survey.

Figures 3-3 graphically presents the results of the well water levels collected during the Round Fourteen sampling event.

Drawn by J.R.W. 11/15/1996

Drawing Number PC0220-5/96:G1SF3-3

Figure 3-3

9MW1 Well Water Level  
Date: 11/4/96 Feet Mean Sea Level: +6.31

9MW5 Well Water Level  
Date: 11/4/96 Feet Mean Sea Level: +7.15

9MW3 Well Water Level  
Date: 11/4/96 Feet Mean Sea Level: +7.21

9MW2 Well Water Level  
Date: 11/4/96 Feet Mean Sea Level: +7.33

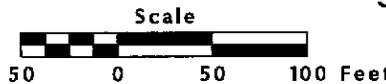

9MW4 Well Water Level  
Date: 11/4/96 Feet Mean Sea Level: +8.58

**Legend:**

⊕ Monitoring Well with Well Water Level Feet Mean Sea Level

--- 11/4/96 Equipotential Line (approximate)

Well	Date Installed	Total Depth	Casing Diameter	Borehole Diameter	Screen Depth	Sand Pack Depth
9MW1	11-4-1992	21'	4"	8.5"	5.25'-20.25'	4.25'-21'
9MW2	11-3-1992	21'	4"	8.5"	5.25'-20.25'	4.25'-21'
9MW3	11-4-1992	21'	4"	8.5"	5.25'-20.25'	4.25'-21'
9MW4	11-9-1992	21'	4"	8.5"	5.25'-20.25'	4.25'-21'
9MW5	8-12-1994	21'	4"	8.5"	5.25'-20.25'	4.25'-21'

## notes:

TEPH: Total Extractable Petroleum Hydrocarbons

PCBs: Polychlorinated Biphenyls

ND(0.004) = Not Detected above the laboratory detection limit in parentheses.

<sup>1</sup> = probably corrected, apparently switched.<sup>2</sup> = Unknown compounds were found in the Diesel range with the estimated concentration of 0.083 mg/L.<sup>3</sup> = Unknown compounds were found in the Diesel range with the estimated concentration of 0.190 ug/L.
