Hi Jerry,

Thank you for your time today. As discussed, based on recent water levels at the subject site we are proposing the collection of grab samples in the source area to assess current conditions in first encountered groundwater. Additionally, groundwater samples will be collected from "B zone" wells located both on- and off-site. This groundwater data set will be used to evaluate contaminant trends and support low-threat case closure. Please contact me if you have any additional questions or concerns.

Thanks,

Joe
