Subject: Second Quarter 2009 Groundwater Monitoring Report for Fuel Leak Case No. RO0000324, Livermore Gas and Mini Mart, 160 Holmes Street, Livermore, California

Dear Mr. and Mrs. Shuwayhat:

On your behalf, Allterra Environmental, Inc. (Allterra) has prepared this second quarter 2009 groundwater monitoring for the property located at 160 Holmes Street in Livermore, California (Site). This report describes the field and analytical methods, provides a summary of groundwater monitoring and interim remedial results, and presents conclusions and recommendations regarding groundwater conditions at the Site.

Site Location and Description

The Site is located on the southwest corner of Holmes Street and Second Street at 160 Holmes Street in Livermore, California (Figure 1). The Site currently operates as a service station and convenience store. Pertinent site features, such as monitoring well locations, are presented in Figure 2.

Groundwater Monitoring

Groundwater monitoring activities are completed on a quarterly basis in order to evaluate groundwater quality beneath and downgradient of the Site over time. For this quarter, groundwater monitoring of fifteen wells (MW-1A through MW-9B) and three extraction wells (EW-1, EW-2, and EW-3) was completed on February 4, 2009.

Groundwater Monitoring Field Activities

Groundwater monitoring activities included measuring the depth to static groundwater in wells MW-1A through MW-9B relative to the top of well casings (TOC), evaluating groundwater in each well for the presence of petroleum hydrocarbon odor and sheen, and purging and sampling groundwater from wells for laboratory analysis. During this quarter, water levels in eight monitoring wells and three extraction wells were too low to collect samples; therefore, only seven monitoring wells were sampled for laboratory analysis (MW-1B, MW-5B, MW-6, MW-7B, MW-7C, MW-8B, and MW-9B). Groundwater monitoring field activities were completed in accordance with Alameda County Environmental Health Services (ACEHS), Regional Water Quality Control Board (RWQCB) guidelines, and Allterra protocols presented in Appendix A. Data and observations gathered during this quarter were recorded in Groundwater Sampling Field Logs, which are included in Appendix B.

Laboratory Analysis of Groundwater Samples

Groundwater samples from monitoring wells were submitted under chain-of-custody documentation to McCampbell Analytical, Inc., of Pacheco, California, a State of California certified laboratory (ELAP #1644). The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA method 8015C, and for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method 8021B. The samples were not analyzed for MTBE, ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), di-isopropyl ether (DIPE), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dibromoethane (EDB), and 1,2-dichloroethane (1,2-DCA) by EPA Method 8260B as a cost saving measure due to the lack of funding from the UST Cleanup Fund. A copy of the chain-of-custody documentation for the samples and the certified analytical report, including quality assurance and quality control (QA/QC) data, are included in Appendix C.

Purge water

Purge water generated during purging of the groundwater monitoring wells was stored on-site in Department of Transportation (DOT) approved 55-gallon drums pending disposal.

Groundwater Monitoring Results

Groundwater Elevation and Gradient Results

On April 21, 2009, recorded depths to groundwater in monitoring wells MW-1A through MW-9B ranged from 35.94 to 38.75 feet below ground surface (bgs). Groundwater elevations are summarized in Table 1 and depicted in Figure 3. For the April 2009 groundwater monitoring event, eight monitoring wells were dry; therefore, there was an insufficient number of wells to calculate a groundwater flow direction and gradient. Historically, groundwater flow is toward the northwest at gradients of less than 0.01 feet per foot.

Analytical Results

Fuel-related compounds were detected at or above laboratory detection limits in four of the seven wells sampled. In well MW-7B, TPHg was detected at a concentration of 170 micrograms per kilogram ($\mu\text{g/L}$); MTBE was detected at a concentration of 190 $\mu\text{g/L}$; benzene was detected at a concentration of 2.1 $\mu\text{g/L}$; toluene was detected at a concentration of 5.8 $\mu\text{g/L}$; and xylenes were detected at a concentration of 0.78 $\mu\text{g/L}$. In well MW-8B, TPHg was detected at a concentration of 50 micrograms per kilogram ($\mu\text{g/L}$) and MTBE was detected at a concentration of 1,300 $\mu\text{g/L}$. In wells MW-5B and MW-9B, MTBE was detected at concentrations of 48 $\mu\text{g/L}$ and 470 $\mu\text{g/L}$, respectively. Groundwater analytical results from well samples are presented in Table 2 and the distribution of TPHg, TPHd, benzene, and MTBE in groundwater is presented in Figure 4.

Status Update of UST Cleanup Fund

As reported in the previous quarter, the UST Cleanup Fund is still in a financial crisis and reimbursement payments to claimants continue to be significantly delayed. Therefore, Allterra continues its immediate cost-saving measures to help the involved parties survive this difficult period, by limiting laboratory analyses to TPHg, BTEX, and MTBE by EPA Method 8015C/8021B, thereby reducing costs by more than \$150 per sample.

The November 4, 2008 Work Plan for Pilot Scale Vapor Extraction System has been delayed due to the UST Cleanup Fund financial situation. We plan to begin the permitting process in third quarter 2009.

Conclusions

Based on the current groundwater monitoring and interim cleanup data, Allterra concludes the following:

- Due to continued low water table conditions, eight monitoring wells and three extraction wells were dry and were not sampled.
- For the February 2009 monitoring event, fuel-related compounds were detected at or above laboratory detection limits in four of the seven wells sampled.
- Wells MW-1A and MW-7A (wells screened to 30 feet bgs) have historically had high levels of contaminants; however, due to the depressed water table, these wells have not been sampled since April 2007.

Recommendations

Based on the conclusions presented above, Allterra recommends the following:

- Continue with the quarterly groundwater monitoring program at the Site.
- Implement the Work Plan for Pilot Scale Vapor Extraction System as soon as feasible.

Limitations

Allterra prepared this report for the use of Livermore Gas and Mini Mart and ACEHS in evaluating groundwater quality at selected on-site locations at the time of this study. Statements, conclusions, and recommendations in this report are based solely on the field observations and analytical results related to work performed by Allterra and there is no warranty, expressed or implied. Site conditions and data can change over time; therefore, data presented in this report is only applicable to the timeframe of this study. Allterra's services have been performed in accordance with environmental principles generally accepted at this time and location. Should you have any questions, please contact Allterra at (831) 425-2608.

Sincerely,
Allterra Environmental, Inc.

Notes:

Samples analyzed for TPHg and TPHd by EPA Method 8015Cm, BTEX by EPA Method 8021B, MTBE by EPA Method 8021B and/or 8260B, and the fuel oxygenates DIPE, ETBE, TAME, EDB, 1,2-DCA, ethanol, methanol, and TBA by EPA Method 8260B.

µg/L = micrograms per liter

NA = Not Analyzed

EDB = 1,2-Dibromoether

NS = Not Sampled

1,2-DCA = 1,2-Dichloroethane

* = Well MW-1 renamed MW-1A, well MW-2 renamed MW-2A, Well MW-3 renamed MW-3A in February 2006

** = Well destroyed in February 2006

*** = Anomalous data observed in MW-7C from October 12, 2006 sample. Therefore, wells MW-7A, MW-7B, and MW-7C were resampled on November 21, 2006.

APPENDIX A
Groundwater Monitoring Field Protocol

Appendix A

Groundwater Monitoring Protocol

Well Monitoring and Sample Collection

A Teflon bailer or submersible pump was used to purge a minimum of three well volumes of groundwater from each well. After each well volume is purged, field parameters such as pH, temperature, and conductivity are recorded. Wells are purged until field parameters have stabilized or a maximum of ten (10) well volumes of groundwater have been removed. When possible, purge rates will not exceed the recharge rate for the well. However, if the well yield is low and the well was dewatered, the well is allowed to recharge to 80% of its original volume prior to sample collection. Field parameter measurements and pertinent qualitative observations, such as groundwater color and odor, are recorded in Groundwater Sampling Field Logs. Groundwater samples are collected in appropriate bottles and stored on ice for delivery, under chain-of-custody documentation, to a state-certified laboratory for analysis.

Equipment Decontamination

All drilling, sampling, and well development equipment was cleaned in a solution of laboratory grade detergent and distilled water or steam cleaned before use at each sampling point.

Field Personnel

During groundwater sampling activities, sampling personnel will wear pertinent attire to minimize risks to health and safety. Field personnel will also use a pair of clean, powderless, surgical gloves for each successive sampling point. Used surgical gloves will be placed into waste barrels for future disposal.

Waste Disposal

Water generated during well purging and sampling activities will be placed into DOT-approved 55-gallon waste drums. Waste drums will be temporarily stored on-site pending proper disposal of wastewater to an approved transport, storage, and disposal (TSD) facility.

	Client P.O.:	Date Completed: 04/30/09

WorkOrder: 0904636

May 04, 2009

Dear James:

Enclosed within are:

- 1) The results of the 7 analyzed samples from your project: **160 Holmes**,
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager

Reporting Limit for DF =1; ND means not detected at or above the reporting limit	W	50	5.0	0.5	0.5	0.5	0.5	0.5	µg/L
	S	1.0	0.05	0.005	0.005	0.005	0.005	0.005	mg/Kg

* water and vapor samples and all TCLP & SPLP extracts are reported in ug/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples in mg/L.

cluttered chromatogram; sample peak coelutes with surrogate peak.

+The following descriptions of the TPH chromatogram are cursory in nature and McC Campbell Analytical is not responsible for their interpretation:

d6) one to a few isolated non-target peaks present in the TPH(g) chromatogram
d9) no recognizable pattern

QC SUMMARY REPORT FOR SW8021B/8015Bm

W.O. Sample Matrix: Water

QC Matrix: Water

BatchID: 42911

WorkOrder 0904636

EPA Method SW8021B/8015Bm		Extraction SW5030B							Spiked Sample ID: 0904636-005A

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content, or inconsistency in sample containers.
