Client: Manwel Shuwayhat
Project Location: 160 Holmes Street, Livermore, California
Subject: Third Quarter 2013 Groundwater Monitoring Report
Report Date: October 29, 2013

To Whom It May Concern:

I have reviewed the report referenced above and approve its distribution to the necessary regulatory agencies. Should any of the regulatory agencies require it, "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached proposal or report is true and correct to the best of my knowledge."

Sincerely,

Manwel Shuwayhat

**SUBJECT: Third Quarter 2013 Groundwater Monitoring Report for Fuel Leak Case
No. RO0000324, Livermore Gas and Mini Mart, 160 Holmes Street,
Livermore, California**

Dear Mr. and Mrs. Shuwayhat:

On your behalf, Allterra Environmental, Inc. (Allterra) has prepared this Third Quarter 2013 Groundwater Monitoring Report for the property located at 160 Holmes Street in Livermore, California (Site). This report describes the field and analytical methods, provides a summary of groundwater monitoring results, and presents conclusions and recommendations regarding groundwater conditions at the Site. Monitoring activities were completed in accordance with Alameda County Environmental Health Services (ACEHS) and Regional Water Quality Control Board (RWQCB) guidelines, and Allterra's protocols presented in Appendix A.

Site Location and Description

The Site is located on the southwest corner of Holmes Street and 2nd Street at 160 Holmes Street in Livermore, California (Figure 1). The Site currently operates as a service station and convenience store. The Site is paved with concrete and asphalt, and a canopy covers the fuel dispensers. Pertinent site features, such as monitoring well locations, are presented on Figure 2.

Groundwater Monitoring for Third Quarter 2013

Field Activities

On August 24, 26 and 28, 2013, Allterra conducted groundwater monitoring at 12 on- and off-site monitoring wells (MW-1A and MW-5A through MW-9B) and three on-site extraction/injection wells (EW-1, EW-3, and EW-3B). Samples were not collected from wells MW-2A, MW-3A, MW-4A, and EW-2 during this monitoring event since these wells are only sampled annually (first quarter). Groundwater monitoring activities included the measurement of static groundwater levels, an evaluation of groundwater in the wells for the presence of petroleum hydrocarbons, field parameter testing, and groundwater quality sampling. Prior to sampling, all groundwater wells were purged using disposable bailers until temperature, color, specific conductance, and turbidity readings had stabilized or until at least three casing volumes had been removed. Groundwater sampling field logs are included in Appendix B.

Laboratory Analysis

Groundwater samples collected from the monitoring and extraction wells were submitted under chain-of-custody documentation to McCampbell Analytical, Inc., of Pittsburg, California, a State of California certified laboratory (ELAP #1644). All samples were analyzed for total petroleum

hydrocarbons as gasoline (TPHg) by EPA method 8015B, and for benzene, toluene, ethylbenzene, xylenes (BTEX), and methyl tert-butyl ether (MTBE) by EPA Method 8021B. Additionally, select wells were tested for total petroleum hydrocarbons as diesel (TPHd) by EPA method 8015B; fuel oxygenates tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and MTBE by EPA Method 8260B; lead scavengers 1,2-dibromoethane (EDB) and 1,2-dichloroethane (1,2-DCA) by EPA Method 8260B, and hexachrome by EPA method E218.6. Copies of the chain-of-custody documentation and the certified analytical report, including quality assurance and quality control (QA/QC) data, are included in Appendix C.

Groundwater Gradient and Flow Direction

On August 24, 2013, Allterra personnel measured and recorded depths to groundwater from the tops of well casings (TOC) for each well. Recorded depths to groundwater ranged from 24.96 to 26.86 feet below TOC. The surveyed elevations of each well casing (measured in feet relative to mean sea level), depths to groundwater, and calculated groundwater elevations are presented in Table 1 and depicted on Figure 3 as groundwater elevation contours. For the August 2013 monitoring event, the general groundwater flow direction was to the north-northwest at a gradient of approximately 0.0073 feet per foot (ft/ft).

Analytical Results

Petroleum constituents were detected in seven of the fifteen wells sampled during this event. A summary of current and historical groundwater analytical results is presented in Table 2. Additionally, current concentrations of dissolved TPHg, TPHd, benzene, MTBE, and TBA in groundwater are shown on Figures 4 through 7. Time trend plots for contaminant concentrations in wells MW-1A, EW-1, and EW-3 are shown on Figures 8 through 15. A discussion of current groundwater analytical results is presented below:

- TPHg was detected in three wells at concentrations ranging from 84 micrograms per liter ($\mu\text{g/L}$) in EW-3B to 510 $\mu\text{g/L}$ in EW-3.
- TPHd was detected in five wells at concentrations ranging from 72 $\mu\text{g/L}$ in EW-1 to 370 $\mu\text{g/L}$ in EW-3.
- Benzene was detected in two wells at concentrations of 0.87 $\mu\text{g/L}$ in EW-3B and 2.0 $\mu\text{g/L}$ in EW-3.
- Toluene was detected in three wells at concentrations ranging from 0.69 $\mu\text{g/L}$ in EW-3B to 5.5 in MW-7A.
- Ethylbenzene was detected in three wells at concentrations ranging from 0.66 $\mu\text{g/L}$ in EW-3B to 3.8 $\mu\text{g/L}$ in MW-7A.
- Xylenes were detected in two wells at concentrations of 1.8 $\mu\text{g/L}$ in EW-3B and 15 $\mu\text{g/L}$ in EW-3.

- MTBE was detected in four wells at concentrations ranging from 1.1 µg/L in MW-7A to 4,300 µg/L in EW-3.
- TBA was detected in six wells at concentrations ranging from 32 µg/L in MW-7A to 19,000 µg/L in MW-1A.
- Hexachrome was detected in four wells at concentrations ranging from 1.6 µg/L in EW-1 to 19 µg/L in EW-3B.
- Lead scavengers were not detected above laboratory reporting limits in any wells sampled this quarter.

Discussion

Following in-situ chemical oxidation (ISCO) activities performed during second quarter 2013, it appears that petroleum constituents in the vicinity of EW-3 (within former source area) have been significantly reduced. During the first quarter 2013 monitoring event, MTBE and TBA were detected in EW-3 at concentrations of 6,300 µg/L and 130,000 µg/L, respectively. Current analytical results following remedial activities indicate MTBE and TBA in EW-3 at concentrations of 4,300 µg/L and 1,600 µg/L, respectively. MTBE and TBA concentrations in EW-3 have increased slightly since the June and July sampling events indicating that some contaminant rebound has occurred, however current concentrations are still well below baseline results. Additionally, hexachrome results following ISCO activities do not indicate any significant increases or adverse affects.

Conclusions

Based on the current groundwater monitoring data, Allterra concludes the following:

- The overall groundwater flow direction is to the north-northwest with an estimated gradient of 0.0073 ft/ft, which is consistent with previous monitoring events.
- For the August 2013 monitoring event, petroleum constituents were detected at or above laboratory detection limits in seven of the fifteen wells sampled. The highest concentrations of petroleum constituents remaining in shallow groundwater are limited to the area around wells EW-1, EW-3, and EW-3B.
- The highest concentration of TPHg and MTBE was detected in EW-3 at concentrations of 510 and 4,300 µg/L, respectively.
- The highest concentration of TBA was detected in well MW-1A (19,000 µg/L). Recent increases in TBA concentrations are likely due to degradation of MTBE caused by ISCO activities and natural processes.

- Since April 2011, petroleum constituents in groundwater have generally exhibited decreasing trends throughout the in-situ treatment zone. Substantial contaminant reduction has occurred in key wells MW-1A, EW-1, EW-3, and EW-3B located within the former source area.
- Based on third quarter 2013 analytical results, MW-1A demonstrates a 99.97%, 99.91%, 99.99%, and 99.99% reduction in TPHg, TPHd, benzene, and MTBE concentrations, respectively. EW-1 demonstrates a 99.86%, 67.27%, 99.89%, and 99.86% reduction in TPHg, TPHd, benzene, and MTBE concentrations, respectively. EW-3 demonstrates a 99.64%, 92.88%, 99.17%, and 98.98% reduction in TPHg, TPHd, benzene, and MTBE concentrations, respectively.
- Decreasing trends in petroleum constituents in shallow groundwater indicate that in-situ remedial efforts have been effective in treating soil and groundwater beneath the former source area at the Site.

Recommendations

Based on the conclusions presented above, Allterra recommends the following:

- Continue with the current quarterly groundwater monitoring at the Site for the purpose of closely monitoring potential contaminant rebound under varying seasonal conditions.
- To reduce project costs, up-gradient wells MW-2A, MW-3A, and EW-2 and cross-gradient well MW-4A will continue to be sampled for TPHg, BTEX, and MTBE on an annual basis (first quarter of each year).
- All other wells will continue to be sampled and analyzed for TPHg, BTEX, and MTBE on a quarterly basis. Only select wells will be analyzed for TPHd, 5-fuel oxygenates, and lead scavengers on a quarterly basis.
- Following four quarters of post-remedial verification monitoring, evaluate the Site for potential low-threat case closure.

Limitations

Allterra prepared this report for the use of Livermore Gas and Mini Mart, ACEHS and RWQCB in evaluating groundwater quality at selected locations at the time of this study. Statements, conclusions, and recommendations in this report are based solely on the field observations and analytical results related to work performed by Allterra and there is no warranty, expressed or implied. Site conditions and data can change over time; therefore, data presented in this report is only applicable to the timeframe of this study. Allterra's services have been performed in accordance with environmental principles generally accepted at this time and location.

Should you have any questions, please contact Allterra at (831) 425-2608.

Sincerely,
Allterra Environmental, Inc.

Notes:

msl: mean sea level

bgs: below ground surface

NA: well not accessible

NC: elevation not calculated

NM: well not measured

* = Well MW-1, 2, and 3 renamed MW-1A, 2A, and 3A respectively

** = Well destroyed on 2/22/06-2/28/06

*** = Well installed on 2/22/06-2/28/06

(a) = Well EW-3 is 35 feet deep with a screen interval from 25 to 30 feet bgs.

(b) = Well EW-3B installed on March 5, 2013 with a screen interval from 24 to 39 feet bgs.

Notes:

Samples analyzed for TPHg and TPHd by EPA Method 8015Bm, BTEX by EPA Method 8021B, MTBE by EPA Method 8021B and/or 8260B, fuel oxygenates and lead scavengers by EPA Method 8260, and hexavalent chromium by EPA Method E200.8.

µg/L = micrograms per liter

NC = Not Calculated

NS = Not Sampled

-- = Not Analyzed

EDB = 1,2-Dibromoether

1,2-DCA = 1,2-Dichloroethane

MTBE = Methyl tertiary butyl ether

DIPE = Di-isopropyl Ether

ETBE = Ethyl tert-Butyl Ether

TAME - tert-Amyl Methyl Ether

TBA = tert-Butanol

" = High concentrations of MTBE resulted in high reporting limits, both TPHg and benzene were estimated just below listed reporting limits by laboratory.

* = Well MW-1 renamed MW-1A, well MW-2 renamed MW-2A, Well MW-3 renamed MW-3A in February 2006.

** = Well destroyed in February 2006.

*** = Anomalous data observed in MW-7C on October 12, 2006. Therefore, MW-7A/B/C were resampled on November 21, 2006.

(a) = Well EW-3 is 35 feet deep with a screen interval from 25 to 30 feet bgs.

(b) = Well EW-3B is 39 feet deep with a screen interval from 24 to 39 feet bgs.

APPENDIX A
Groundwater Monitoring Field Protocol

Appendix A

Groundwater Monitoring Protocol

Well Monitoring and Sample Collection

A Teflon bailer or submersible pump was used to purge a minimum of three well volumes of groundwater from each well. After each well volume is purged, field parameters such as pH, temperature, and conductivity are recorded. Wells are purged until field parameters have stabilized or a maximum of ten (10) well volumes of groundwater have been removed. When possible, purge rates will not exceed the recharge rate for the well. However, if the well yield is low and the well was dewatered, the well is allowed to recharge to 80% of its original volume prior to sample collection. Field parameter measurements and pertinent qualitative observations, such as groundwater color and odor, are recorded in Groundwater Sampling Field Logs. Groundwater samples are collected in appropriate bottles and stored on ice for delivery, under chain-of-custody documentation, to a state-certified laboratory for analysis.

Equipment Decontamination

All drilling, sampling, and well development equipment was cleaned in a solution of laboratory grade detergent and distilled water or steam cleaned before use at each sampling point.

Field Personnel

During groundwater sampling activities, sampling personnel will wear pertinent attire to minimize risks to health and safety. Field personnel will also use a pair of clean, powderless, surgical gloves for each successive sampling point. Used surgical gloves will be placed into waste barrels for future disposal.

Waste Disposal

Water generated during well purging and sampling activities will be placed into DOT-approved 55-gallon waste drums. Waste drums will be temporarily stored on-site pending proper disposal of wastewater to an approved transport, storage, and disposal (TSD) facility.

"When Quality Counts"

Analytical Report

WorkOrder: 1308949

Report Created for: Allterra Environmental
849 Almar Ave, Ste. C #281
Santa Cruz, CA 95060

Project Contact: James Allen

Project Name: #160 Holmes Street Livermore CA

Project P.O.:

Project Received: 08/28/2013

Analytical Report reviewed & approved for release on 09/05/2013 by:

Glossary of Terms & Qualifier Definitions

Client: Allterra Environmental
Project: #160 Holmes Street Livermore CA
WorkOrder: 1308949

Glossary Abbreviation

<u>Glossary Abbreviation</u>	<u>Description</u>
95% Interval	95% Confident Interval
DF	Dilution Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
RL	Reporting Limit
RPD	Relative Percent Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value

Analytical Qualifier

H	samples were analyzed out of holding time
S	spike recovery outside accepted recovery limits
b1	aqueous sample that contains greater than ~1 vol. % sediment
c4	surrogate diluted out of range or surrogate coelutes with another peak.
d1	weakly modified or unmodified gasoline is significant
e2	diesel range compounds are significant; no recognizable pattern
e4	gasoline range compounds are significant.
e6	one to a few isolated peaks present in the THP(d/mo) chromatogram
e7	oil range compounds are significant

Analytical Report

Client: Allterra Environmental
Project: #160 Holmes Street Livermore CA

Glossary of Terms & Qualifier Definitions

Client: Allterra Environmental
Project: #160 Holmes St., Livermore, CA
WorkOrder: 1308A07

<u>Glossary Abbreviation</u>	<u>Description</u>
95% Interval	95% Confident Interval
DF	Dilution Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix; or sample diluted due to high matrix or analyte content.
RL	Reporting Limit
RPD	Relative Percent Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
