**Re: Former Chevron Service Station #9-1153
3126 Fernside Boulevard, Alameda, California**

Dear Mr. Seto:

Enclosed is the Second Quarter Groundwater Monitoring Report for 1999 that was prepared by our consultant Blaine Tech Services, Inc. for the above noted site. Samples were analyzed for TPH-g, BTEX and MtBE constituents.

The sampling frequency for monitoring wells C-3, MW-4, MW-8 and MW-9 is annually (1st quarter) and semi-annually (1st & 3rd quarters) for wells MW-5 and MW-10; the remaining wells C-1, MW-6 and MW-7 are sampled quarterly.

The use of hydrogen peroxide injection into monitoring well C-1 and the addition of Oxygen Releasing Compound (ORC) into wells MW-6 and MW-7 to remediate the groundwater at this site appear to be working.

The benzene concentration in well C-1 increased from the previous sampling event, with separate phase hydrocarbons (SPH) being detected in March at 0.76 feet, in which 0.2642 gallons of SPH was removed. The initial injection of hydrogen peroxide was effective in reducing the concentration of petroleum hydrocarbons in this well. Therefore, another injection of hydrogen peroxide will be performed prior to the next sampling event in July.

The benzene constituent decreased in well MW-6 from the previous sampling event, while increasing in well MW-7. The dissolved oxygen (DO) reading in well MW-7 was 0.8 mg/l which is very low for natural attenuation to take place, therefore, additional oxygen releasing material will be added to this well in the next sampling event.

99 JUN 28 PM 3:25
ENVIRONMENTAL PROTECTION

June 22, 1999
Mr. Larry Seto
Former Chevron Service Station #9-1153
Page 2

Depth to the ground water varied from 1.04 feet to 4.61 feet below grade with a direction of flow easterly.

Chevron will continue to monitor the wells in the sampling frequency as noted above. If you have questions or comments, call me at (925) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

Philip R. Briggs
Site Assessment and Remediation Project Manager

Second Quarter 1999 Groundwater Monitoring at
Former Chevron Service Station Number 9-1153
3126 Fernside Blvd.
Alameda, CA

Monitoring Performed on April 19, 1999

Groundwater Sampling Report 990419-Y-3

This report covers the routine monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient

map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

Christine Lillie
Project Coordinator

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

** MS = Matrix Spike, MSD = MS Duplicate, RPD = Relative % Difference
