Subject: **#RO0000346**

Site Address: 3519 Castro Valley Boulevard, Castro Valley, CA
Castro Valley Gasoline Service Station

Dear Mr. Plunkett:

SOMA's "First Quarter 2008 Groundwater Monitoring Report" for the subject property has been uploaded to the State's GeoTracker database and Alameda County's FTP site for your review.

Thank you for your time in reviewing our report. If you have any questions or comments, please call me at (925) 734-6400.

Sincerely,

Mansour Sepehr, Ph.D., PE
Principal Hydrogeologist

CERTIFICATION

SOMA Environmental Engineering, Inc. has prepared this report on behalf of Mr. Mirazim Shakoori, property owner of 3519 Castro Valley Boulevard, Castro Valley, California to comply with requirements of Alameda County Health Care Services for the First Quarter 2008 groundwater monitoring event.

Mansour Sepehr, Ph.D., P.E.
Principal Hydrogeologist

2008 Monitoring Event

1. INTRODUCTION

SOMA Environmental Engineering, Inc. (SOMA) has prepared this report on behalf of Mr. Mirazim Shakoori, property owner of the former BP gasoline station located at 3519 Castro Valley Boulevard, Castro Valley, California (the Site, Figure 1). The Site is located in an area of primarily residential and commercial properties.

This report summarizes results of the First Quarter 2008 groundwater monitoring event conducted at the Site on January 17, 2008. Included are the physical and chemical properties measured in the field for each groundwater sample, including pH, temperature, and electrical conductivity (EC). Laboratory analytical results for the groundwater samples are also included.

Activities were performed in accordance with general guidelines of the California Regional Water Quality Control Board (CRWQCB) and Alameda County Health Care Services (ACHCS). Appendix A details procedures used by SOMA during this monitoring event.

1.1 Field Activities and Laboratory Analysis for First Quarter 2008 Event

1.1.1 Field Activities

On January 17, 2008, five on-site monitoring wells (ESE-1, ESE-2, ESE-5, MW-6, and SOMA-1) and three off-site monitoring wells (SOMA-2 to SOMA-4) were measured for depth to groundwater. On January 17, 2008, additional field measurements and grab groundwater samples were collected from all of the monitoring wells. At MW-7, no depth to groundwater was measured and no field measurements/samples were taken because a car was parked over the well. Figure 2 shows well locations.

The top of the casing elevation data and the depth to groundwater in each monitoring well were used to calculate the groundwater elevation. The top of casing elevation was based on an elevation datum of 56.33 feet NAVD88. Appendix B includes survey data.

1.1.2 Laboratory Analysis

Pacific Analytical Laboratory, a California state-certified laboratory, analyzed groundwater samples for the following: total petroleum hydrocarbons as gasoline (TPH-g); benzene, toluene, ethylbenzene, total xylenes (collectively termed BTEX); methyl tertiary-butyl ether (MtBE); gasoline oxygenates, and lead scavengers. All were prepared using EPA Method 5030B and analyzed using Method EPA 8260B.

2. RESULTS

Following are results of field measurements and laboratory analyses for the January 17, 2008 groundwater monitoring event.

2.1 Field Measurements

Table 1 presents calculated groundwater elevation and depth to groundwater in each monitoring well. Depths to groundwater ranged from 6.59 feet in well ESE-5 to 10.01 feet in SOMA-1. Groundwater elevations ranged from 167.75 feet in SOMA-3 to 172.37 feet in MW-6. Table 1 also presents historical groundwater elevations in the monitoring wells.

The groundwater elevation contour map is displayed in Figure 3. Groundwater flow direction is southeasterly across the Site. The groundwater gradient is approximately 0.0147 feet/feet.

Since the previous monitoring event (Fourth Quarter 2007), the groundwater flow direction has remained southeasterly, and the groundwater gradient has increased. Refer to Table 1 for detailed historical groundwater elevation trends.

2.2 Laboratory Analyses

Table 1 presents laboratory analytical results of groundwater samples for TPH-g, BTEX, and MtBE. Table 2 presents laboratory analytical results of groundwater samples for gasoline oxygenates and lead scavengers.

TPH-g was below the laboratory-reporting limit in groundwater samples collected throughout the Site except at wells ESE-1 and ESE-5, where it was detected at 69.9 µg/L and 2,730 µg/L, respectively. Figure 4 displays the contour map of TPH-g concentrations in the groundwater. As illustrated, TPH-g has only minimally impacted the groundwater throughout the site.

The following BTEX analytes were observed during this monitoring event:

- In wells ESE-1 and SOMA-1, toluene, ethylbenzene, and total xylenes were below the laboratory-reporting limit, and benzene was at a low level.
- In ESE-5, toluene and total xylenes were below the laboratory-reporting limit. Benzene and ethylbenzene were at low levels.
- In ESE-2, MW-6 and off-site wells SOMA-2, SOMA-3 and SOMA-4, all BTEX analytes were below the laboratory-reporting limit.

Due to low or non-detectable levels of benzene throughout the site, no iso-concentration figure was drawn for benzene.

MtBE was below the laboratory-reporting limit in wells MW-6 and SOMA-2. Detectable MtBE concentrations ranged from 8.87 µg/L in well SOMA-4 to 80.2 µg/L in ESE-2. Figure 5 displays the contour map of MtBE concentrations in the groundwater. The MtBE plume has migrated off-site; however, only trace concentrations were detected in the off-site wells.

The following gasoline oxygenate and lead scavenger analytes were observed during this monitoring event.

- All isopropyl ether (DIPE), ethyl tertiary-butyl ether (ETBE), ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) constituents were below the laboratory-reporting limit in all groundwater samples collected during this monitoring event.
- Tertiary-amyl methyl ether (TAME) was detected at 2.52 µg/L, 3.38 µg/L and 2.06 µg/L in ESE-1, ESE-2, and SOMA-1, respectively. TAME was below the laboratory-reporting limit in the remaining groundwater samples.
- Tertiary-butyl alcohol (TBA) was the most dominant gasoline oxygenate analyte detected during this monitoring event. TBA was below the laboratory-reporting limit in wells MW-6, SOMA-2, SOMA-3 and SOMA-4. Detectable TBA concentrations ranged from 17.2 µg/L in ESE-5 to 61.5 µg/L in ESE-1.

Figure 6 displays the contour map of TBA concentrations in the groundwater. As illustrated, TBA has only minimally impacted the groundwater throughout the site.

Refer to Tables 1 and 2 for detailed historical concentration trends. Appendix C includes the laboratory report and chain of custody form for the First Quarter 2008 monitoring event at the Site.

3. CONCLUSIONS AND RECOMMENDATIONS

Findings of the First Quarter 2008 groundwater monitoring event are summarized as follows:

- The groundwater flow direction has remained southeasterly across the Site.
- TBA is formed in the environment through oxidation of MtBE in the atmosphere followed by hydrolysis or through microbial oxidation of MtBE in impacted aquifer materials. In general, both the MtBE and TBA plumes appear to be centrally located in the southeastern section of the Site. This can be attributed to the south to southeasterly groundwater flow direction across the Site from the former UST cavity.

- Due to its high mobility, MtBE has migrated off-site. However, in the northern section of the Site, at well MW-6, all tested constituents were at non-detectable levels.
- The TPH-g concentration as detected in well ESE-5 was 2,730 µg/L, where there was once a source area; the other tested constituents (BTEX, MtBE, and gasoline oxygenates) were at low or non-detectable levels.

SOMA recommends the following action item:

- Adoption of *no further action* (NFA) status for the Site by the ACHCS, based on continued low to non-detectable concentration levels of contaminants.

Notes:

< : Not detected above laboratory reporting limit.

¹ Top of Casing Elevations were resurveyed by Kier & Wright Engineers Surveyors of Pleasanton, CA on June 21, 2004.

C: Presence confirmed, but RPD between columns exceeds 40%.

H: Heavier hydrocarbons contributed to the quantitation.

NA: Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible. Well ESE-2 also inaccessible during the First Quarter 2007. Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event

NM: Not Measured

Well ESE-2 was covered over with dirt during the First Quarter 2007 monitoring event.

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

Equipment Blanks (EB-PRB & EB-PMP) were done to make sure decon efforts were adequate.

Z: Sample exhibits unknown single peak or peaks.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Notes:

< : Not detected above laboratory reporting limit.

NA: Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible.

Well ESE-2 was inaccessible during the First Quarter 2007, dirt was covered over well

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the Site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Appendix A

Standard Operating Procedures for Conducting Groundwater Monitoring Activities

Standard Operating Procedures for Conducting Groundwater Monitoring Activities

Water Level Measurements

Prior to measurement of groundwater depth at each monitoring well, equalization with the surrounding aquifer must be achieved. Initially, the well cap is removed and the pressure is allowed to dissipate, creating a more stable water table level within the well. After about 10-15 minutes, once the water level in the well stabilizes, the depth to groundwater in each monitoring well is measured from the top of the casing to the nearest 0.01 foot using an electric sounder.

Purging and Field Measurements

Prior to sample collection, each monitoring well is purged using a battery-operated, 2-inch-diameter pump (Model ES-60 DC). To ensure that final samples are in equilibrium with, and representative of, the surrounding groundwater, during purging several samples are taken for field measurements of pH, temperature and electrical conductivity (EC). These parameters are measured with a Hanna pH, conductivity, and temperature meter. Equipment is calibrated on-site using standard solutions and procedures provided by the manufacturer.

The pH of groundwater has an effect on the activity of microbial populations in the groundwater. The groundwater temperature affects the metabolic activity of bacteria. The groundwater EC is directly related to the concentration of total dissolved solids (TDS) in solution.

Purging continues until these parameters stabilize or three casing volumes are purged.

Sampling

For sampling purposes, after purging a disposable polyethylene bailer is used to collect sufficient samples from each monitoring well for laboratory analyses. Groundwater samples are transferred to 40-mL VOA vials and preserved with hydrochloric acid. The vials are sealed to prevent air bubbles from forming within the headspace. For TPH-d analysis, groundwater samples are collected using 1-L, amber, nonpreserved glass containers. Samples are placed in an ice-filled cooler and maintained at 4°C. A chain of custody form for all samples is prepared to accompany the samples, which are promptly delivered to a California state-certified analytical laboratory.

THE STATION IS LOCATED IN THE CITY OF HAYWARD AT THE RAILROAD CROSSING OF THE SOUTHERN PACIFIC RAIL-ROAD AND BLOSSOM WAY, IN THE TOP OF THE NORTHWEST CURB OF BLOSSOM WAY.

TO REACH THE STATION FROM THE JUNCTION OF U S HIGHWAY 880 ON WEST A STREET, GO SOUTHEAST ON WEST A STREET FOR 0.2 MILES TO A CROSSROAD, HATHAWAY AVE ON THE LEFT, SANTA CLARA STREET ON THE RIGHT. TURN LEFT, NORTH, ON HATHAWAY AVENUE AND CONTINUE FOR 0.7 MILES TO WEST BLOSSOM WAY. TURN RIGHT, NORTH, ON WEST BLOSSOM WAY AND CONTINUE FOR 0.25 MILES TO THE STATION ON THE LEFT, JUST PAST THE RAIL-ROAD TRACKS.

THE STATION IS 48.95 M (160.6 FT) NORTHEAST OF THE NORTHEAST RAIL, 7.01 M NORTHWEST OF THE CENTER OF BLOSSOM WAY, 0.24 M (0.8 FT) NORTH OF THE NORTH CORNER OF A STEEL GRATE IN THE STREET, 5.6 M (18.5 FT) SOUTHWEST OF A POWER POLE AND 0.12 M (0.4 FT) HIGHER THAN THE STREET.
