Environmental Health

September 30, 2008

Mr. Steven Plunkett
Alameda County Health Care Services Agency
1131 Harbor Bay Parkway, Suite 250
Alameda, California 94502-6577

Subject: #RO0000346

Site Address: 3519 Castro Valley Boulevard, Castro Valley, CA
Castro Valley Gasoline Service Station

Dear Mr. Plunkett:

SOMA's "Third Quarter 2008 Groundwater Monitoring Report" for the subject property has been uploaded to the State's GeoTracker database and Alameda County's FTP site for your review.

Thank you for your time in reviewing our report. If you have any questions or comments, please call me at (925) 734-6400.

Sincerely,

A handwritten signature in black ink, appearing to read "Mansour Sepehr".

Mansour Sepehr, Ph.D., PE
Principal Hydrogeologist

- Appendix E: Non-Hazardous Waste manifest for Groundwater Removal

1. INTRODUCTION

1.1 Overview

SOMA Environmental Engineering, Inc. (SOMA) has prepared this report on behalf of Mr. Mirazim Shakoori, property owner of the former BP gasoline station located at 3519 Castro Valley Boulevard, Castro Valley, California. The site is located in an area of primarily residential and commercial properties (Figure 1).

This report summarizes results of the Third Quarter 2008 groundwater monitoring event conducted at the site on July 16, 2008. Included are physical and chemical properties measured in the field for each groundwater sample, including pH, temperature, and electrical conductivity (EC). Laboratory analytical results for groundwater samples are also included.

1.2 Field Activities and Laboratory Analysis for Third Quarter 2008 Event

1.2.1 Field Activities

On July 16, 2008, five on-site monitoring wells (ESE-1, ESE-2, ESE-5, MW-6, and SOMA-1) and four off-site monitoring wells (MW-7, SOMA-2 to SOMA-4) were measured for depth to groundwater. On July 16, 2008, additional field measurements and grab groundwater samples were collected from all monitoring wells. Figure 2 shows well locations.

Top of casing elevation data and depth to groundwater in each monitoring well were used to calculate groundwater elevation. The top of casing elevation was based on an elevation datum of 56.33 feet NAVD88. Appendix B includes survey data.

Activities were performed in accordance with general guidelines of the California Regional Water Quality Control Board (CRWQCB) and Alameda County Environmental Health Services (ACEH). Appendix A details procedures followed by SOMA during this monitoring event.

1.2.2 Laboratory Analysis

Pacific Analytical Laboratory, a California state-certified laboratory, analyzed groundwater samples for the following: total petroleum hydrocarbons as gasoline (TPH-g); benzene, toluene, ethylbenzene, total xylenes (collectively termed BTEX); methyl tertiary-butyl ether (MtBE); gasoline oxygenates, and lead scavengers. All were prepared using EPA Method 5030B and analyzed using Method EPA 8260B.

2. RESULTS

Following are results of field measurements and laboratory analyses for the July 16, 2008 groundwater monitoring event.

2.1 Field Measurements

Table 1 presents calculated groundwater elevation and depth to groundwater in each monitoring well. Depths to groundwater ranged from 7.76 feet in well ESE-5 to 10.64 feet in ESE-2. Groundwater elevations ranged from 166.56 feet in SOMA-3 to 172.00 feet in MW-6. Table 1 also presents historical groundwater elevations in monitoring wells.

Depths to groundwater at neighboring site wells ranged from 4.06 feet in MW-7 to 9.03 feet in MW-3. Groundwater elevations ranged from 165.51 feet in well MW-12 to 171.82 feet in well MW-1. Approximately 0.21 feet of free product was detected at well MW-4.

The groundwater elevation contour map is displayed in Figure 3. Groundwater flow direction is southeasterly across the site. The groundwater gradient is approximately 0.0148 feet/feet.

In general, groundwater flow direction at the neighboring site was toward extraction well EW-1.

Since the previous monitoring event (Second Quarter 2008), the groundwater flow direction and gradient have not changed. Refer to Table 1 for detailed historical groundwater elevation trends.

2.2 Laboratory Analyses

Table 1 presents laboratory analytical results of groundwater samples for TPH-g, BTEX, and MtBE. Table 2 presents laboratory analytical results of groundwater samples for gasoline oxygenates and lead scavengers.

TPH-g was below the laboratory-reporting limit in groundwater samples collected throughout the site except at wells ESE-1 and ESE-5, where it was detected at 1,400 µg/L and 2,160 µg/L, respectively. Figure 4 displays the contour map of TPH-g concentrations in groundwater. As illustrated, TPH-g has only minimally impacted groundwater throughout the site. The highest TPH-g concentration was detected at neighboring site well MW-6, at 88,000 µg/L.

The following BTEX analytes were observed during this monitoring event:

- In SOMA-1, toluene, ethylbenzene, and total xylenes were below laboratory-reporting limits, and benzene was at a low level.

- In ESE-5, toluene and total xylenes were below laboratory-reporting limits. Benzene and ethylbenzene were at low levels.
- In ESE-2, MW-6 and off-site wells MW-7, SOMA-2, SOMA-3 and SOMA-4, all BTEX analytes were below laboratory-reporting limits.
- The highest BTEX concentrations were detected in ESE-1 at 223 µg/L, 3.88 µg/L, 12.6 µg/L, and 17.88 µg/L, respectively.

Due to low or non-detectable levels of benzene throughout the site, no iso-concentration figure was drawn for benzene. However, high BTEX concentrations were detected at the neighboring site.

MtBE was below the laboratory-reporting limit in MW-6 and SOMA-2. Detectable MtBE concentrations ranged from 6.28 µg/L in ESE-1 to 54 µg/L in ESE-2. Figure 5 displays the contour map of MtBE concentrations in groundwater. The MtBE plume has migrated off-site; however, only trace concentrations were detected in off-site wells. As illustrated in Figure 5, the region of highest MtBE impact was in the vicinity of neighboring pump islands at EW-1.

The following gasoline oxygenate and lead scavenger analytes were observed during this monitoring event.

- Isopropyl ether (DIPE), ethyl tertiary-butyl ether (ETBE), tertiary-amyl methyl ether (TAME), ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) constituents were below laboratory-reporting limits in all groundwater samples collected during this monitoring event.
- Tertiary-butyl alcohol (TBA) was the most dominant gasoline oxygenate analyte detected during this monitoring event, and was detected in wells ESE-1, ESE-2, and SOMA-1; It was below the laboratory-reporting limit in all other tested wells. Detectable TBA concentrations ranged from 9.95 µg/L in ESE-2 to 264 µg/L in SOMA-1.

Figure 6 displays the contour map of TBA concentrations in groundwater. As illustrated, TBA has only minimally impacted groundwater throughout the site. The highest TBA concentration was detected at neighboring site well EW-1, which is in the vicinity of the pump islands.

Refer to Tables 1 and 2 for detailed historical concentration trends. Appendix C includes the laboratory report and chain of custody form for the Third Quarter 2008 monitoring event.

Appendix D shows laboratory data and groundwater elevations measured at the neighboring site during Third Quarter 2008.

Purged groundwater from each well was stored on-site in one 55-gallon drum which was generated during this event. On August 8, 2008, NRC Environmental

Services transported the drum to Crosby & Overton, Inc. in Long Beach, California. A copy of the non-hazardous waste manifest for the transport is shown in Appendix E.

3. CONCLUSIONS AND RECOMMENDATIONS

3.1 Conclusions

Conclusions based on the Third Quarter 2008 groundwater monitoring event are summarized as follows:

- The groundwater flow direction has remained southeasterly across the site. At the neighboring site, groundwater was flowing toward extraction well EW-1.
- In general, both the MtBE and TBA plumes appear to be centrally located in the southeastern section of the site. TBA is formed in the environment through oxidation of MtBE in the atmosphere followed by hydrolysis or through microbial oxidation of MtBE in impacted aquifer materials. Locations of the MtBE and TBA plumes can be attributed to the south-to-southeasterly groundwater flow direction across the site from the former UST cavity.
- Due to its high mobility, MtBE has migrated off-site. However, in the northern section of the site, at MW-6, all tested constituents were at non-detectable levels.
- TPH-g was detected at 2,160 µg/L in ESE-5, where there was once a source area, and has decreased since the previous monitoring event (Second Quarter 2008); other tested constituents (BTEX, MtBE, and gasoline oxygenates) were at low or non-detectable levels.
- In general, the highest concentrations during this monitoring event were detected in neighboring site wells EW-1 and MW-6.

3.2 Recommendation

SOMA recommends the following action item:

- Adoption of No Further Action (NFA) status for the site by ACEH, based on continued low to non-detectable levels of contaminant concentrations.

4. MONITORING SCHEDULE

The next joint monitoring event (Fourth Quarter 2008) for the Site and neighboring site has been scheduled for October 14, 2008.

Notes:

< : Not detected above laboratory reporting limit.

1 Top of Casing Elevations were resurveyed by Kier & Wright Engineers Surveyors of Pleasanton, CA on June 21, 2004.

C: Presence confirmed, but RPD between columns exceeds 40%.

H: Heavier hydrocarbons contributed to the quantitation.

NA: Not Applicable/Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible. Well ESE-2 also inaccessible during the First Quarter 2007. Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event

NM: Not Measured

Well ESE-2 was covered over with dirt during the First Quarter 2007 monitoring event.

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

Equipment Blanks (EB-PRB & EB-PMP) were done to make sure decon efforts were adequate.

Z: Sample exhibits unknown single peak or peaks.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Notes:

< : Not detected above laboratory reporting limit.

NA: Not Analyzed. Due to construction activities in the Third Quarter 2003, which consisted of the replacement of the USTs and dispensers, wells ESE-1 & ESE-2 were inaccessible.

Well ESE-2 was inaccessible during the First Quarter 2007, dirt was covered over well

Well MW-7 had a car parked over it and was inaccessible during the First Quarter 2008 monitoring event.

The Third Quarter 2003 was the first time that SOMA analyzed groundwater samples at the Site.

The Third Quarter 2004 was the first time that SOMA analyzed groundwater samples at wells SOMA-1 to SOMA-4.

Gasoline Oxygenates:

TBA: tertiary butyl alcohol

DIPE: isopropyl ether

ETBE: ethyl tertiary butyl ether

TAME: methyl tertiary amyl ether

Ethanol

Lead Scavengers:

1,2-DCA: 1,2-Dichloroethane

EDB: 1,2-Dibromoethane

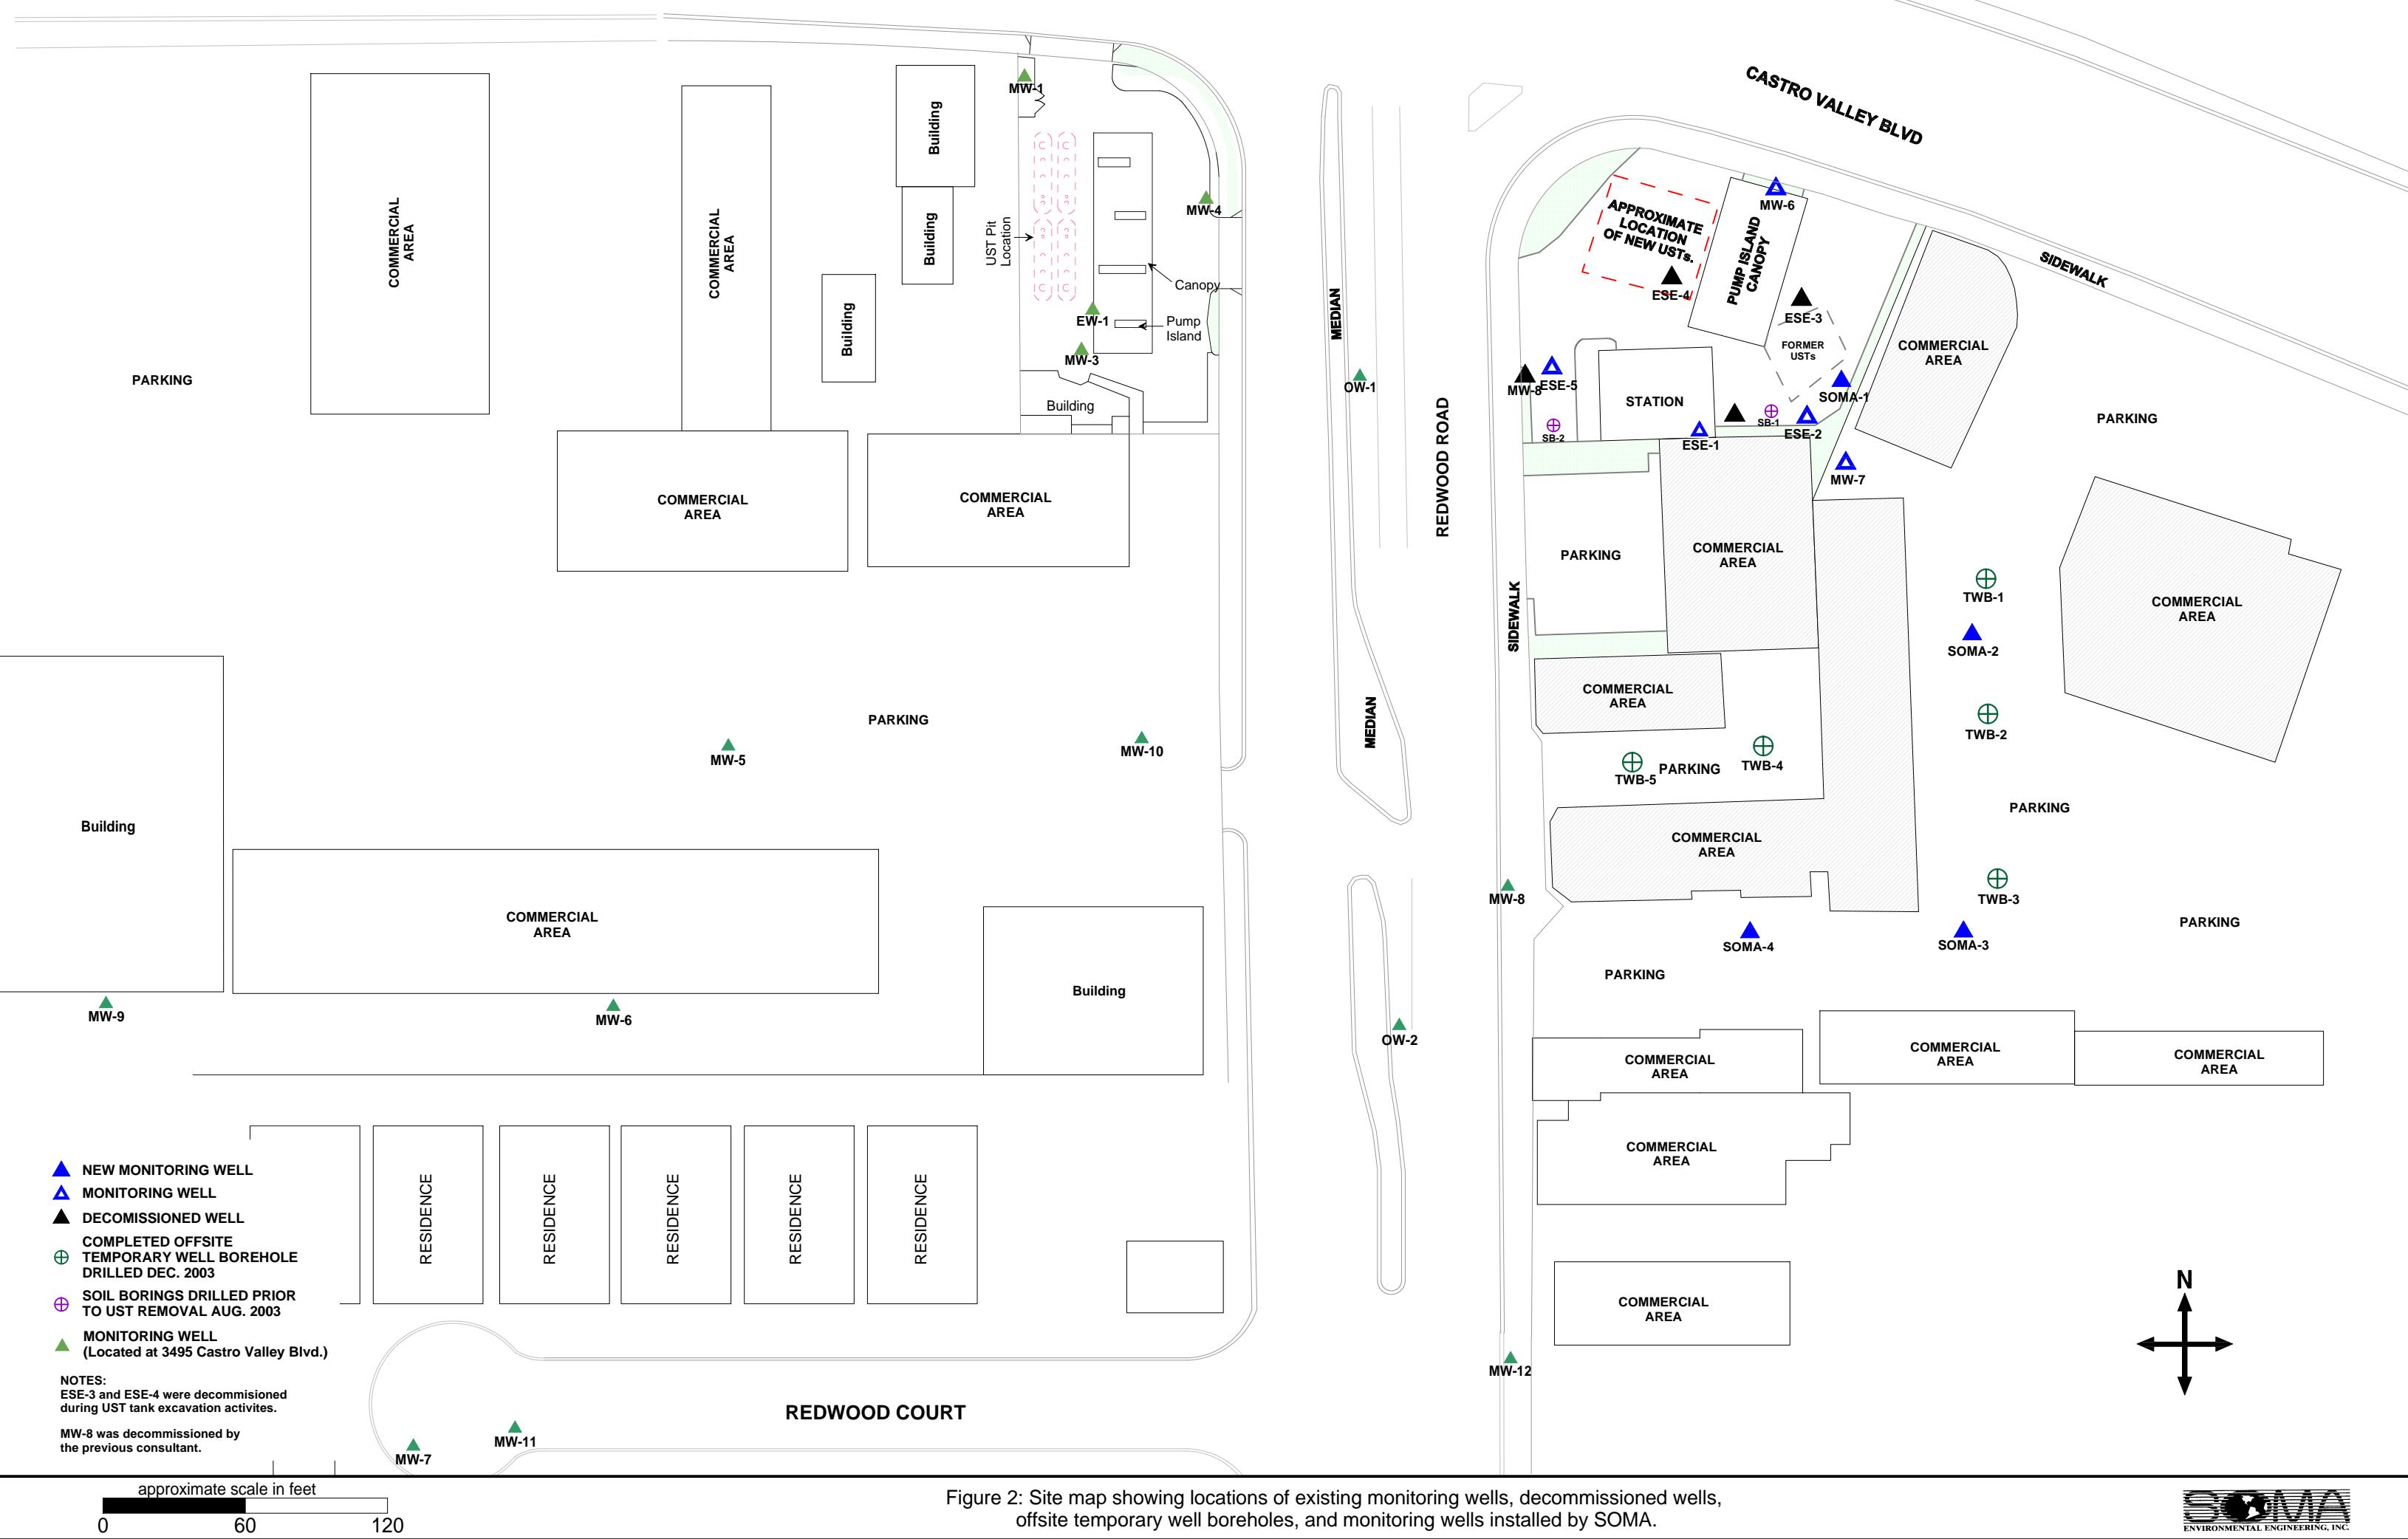

Figure 2: Site map showing locations of existing monitoring wells, decommissioned wells, offsite temporary well boreholes, and monitoring wells installed by SOMA.

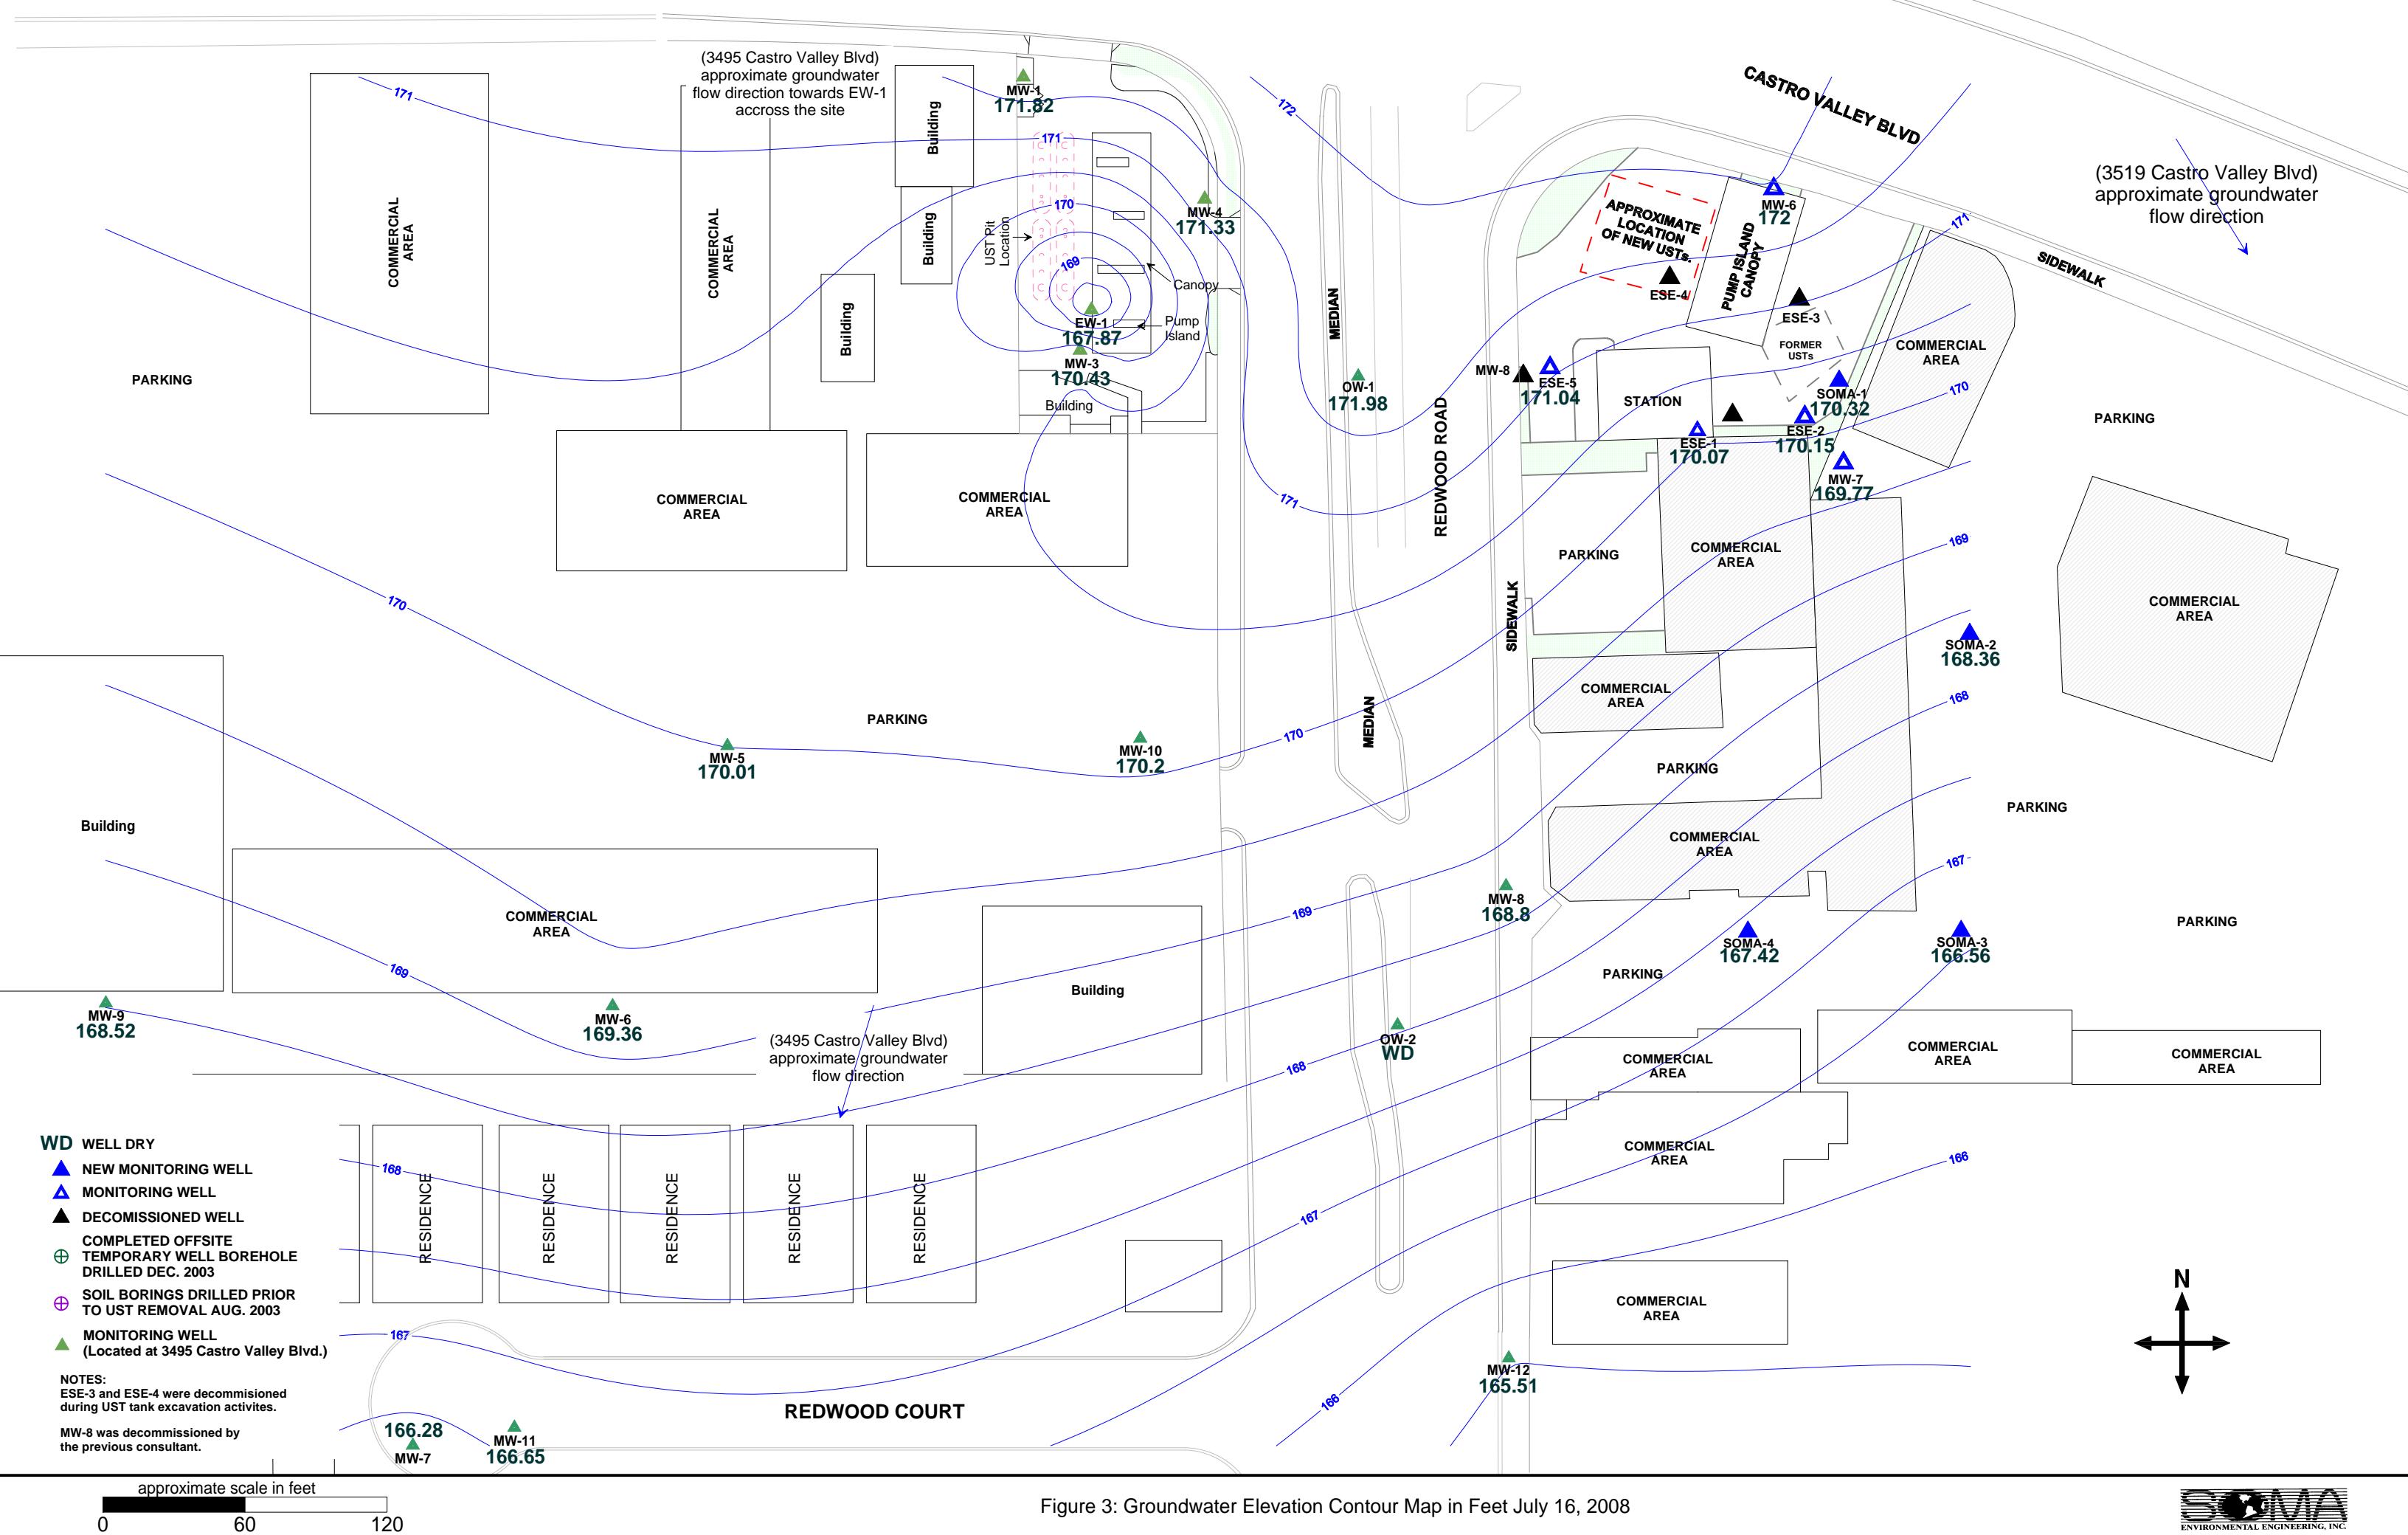

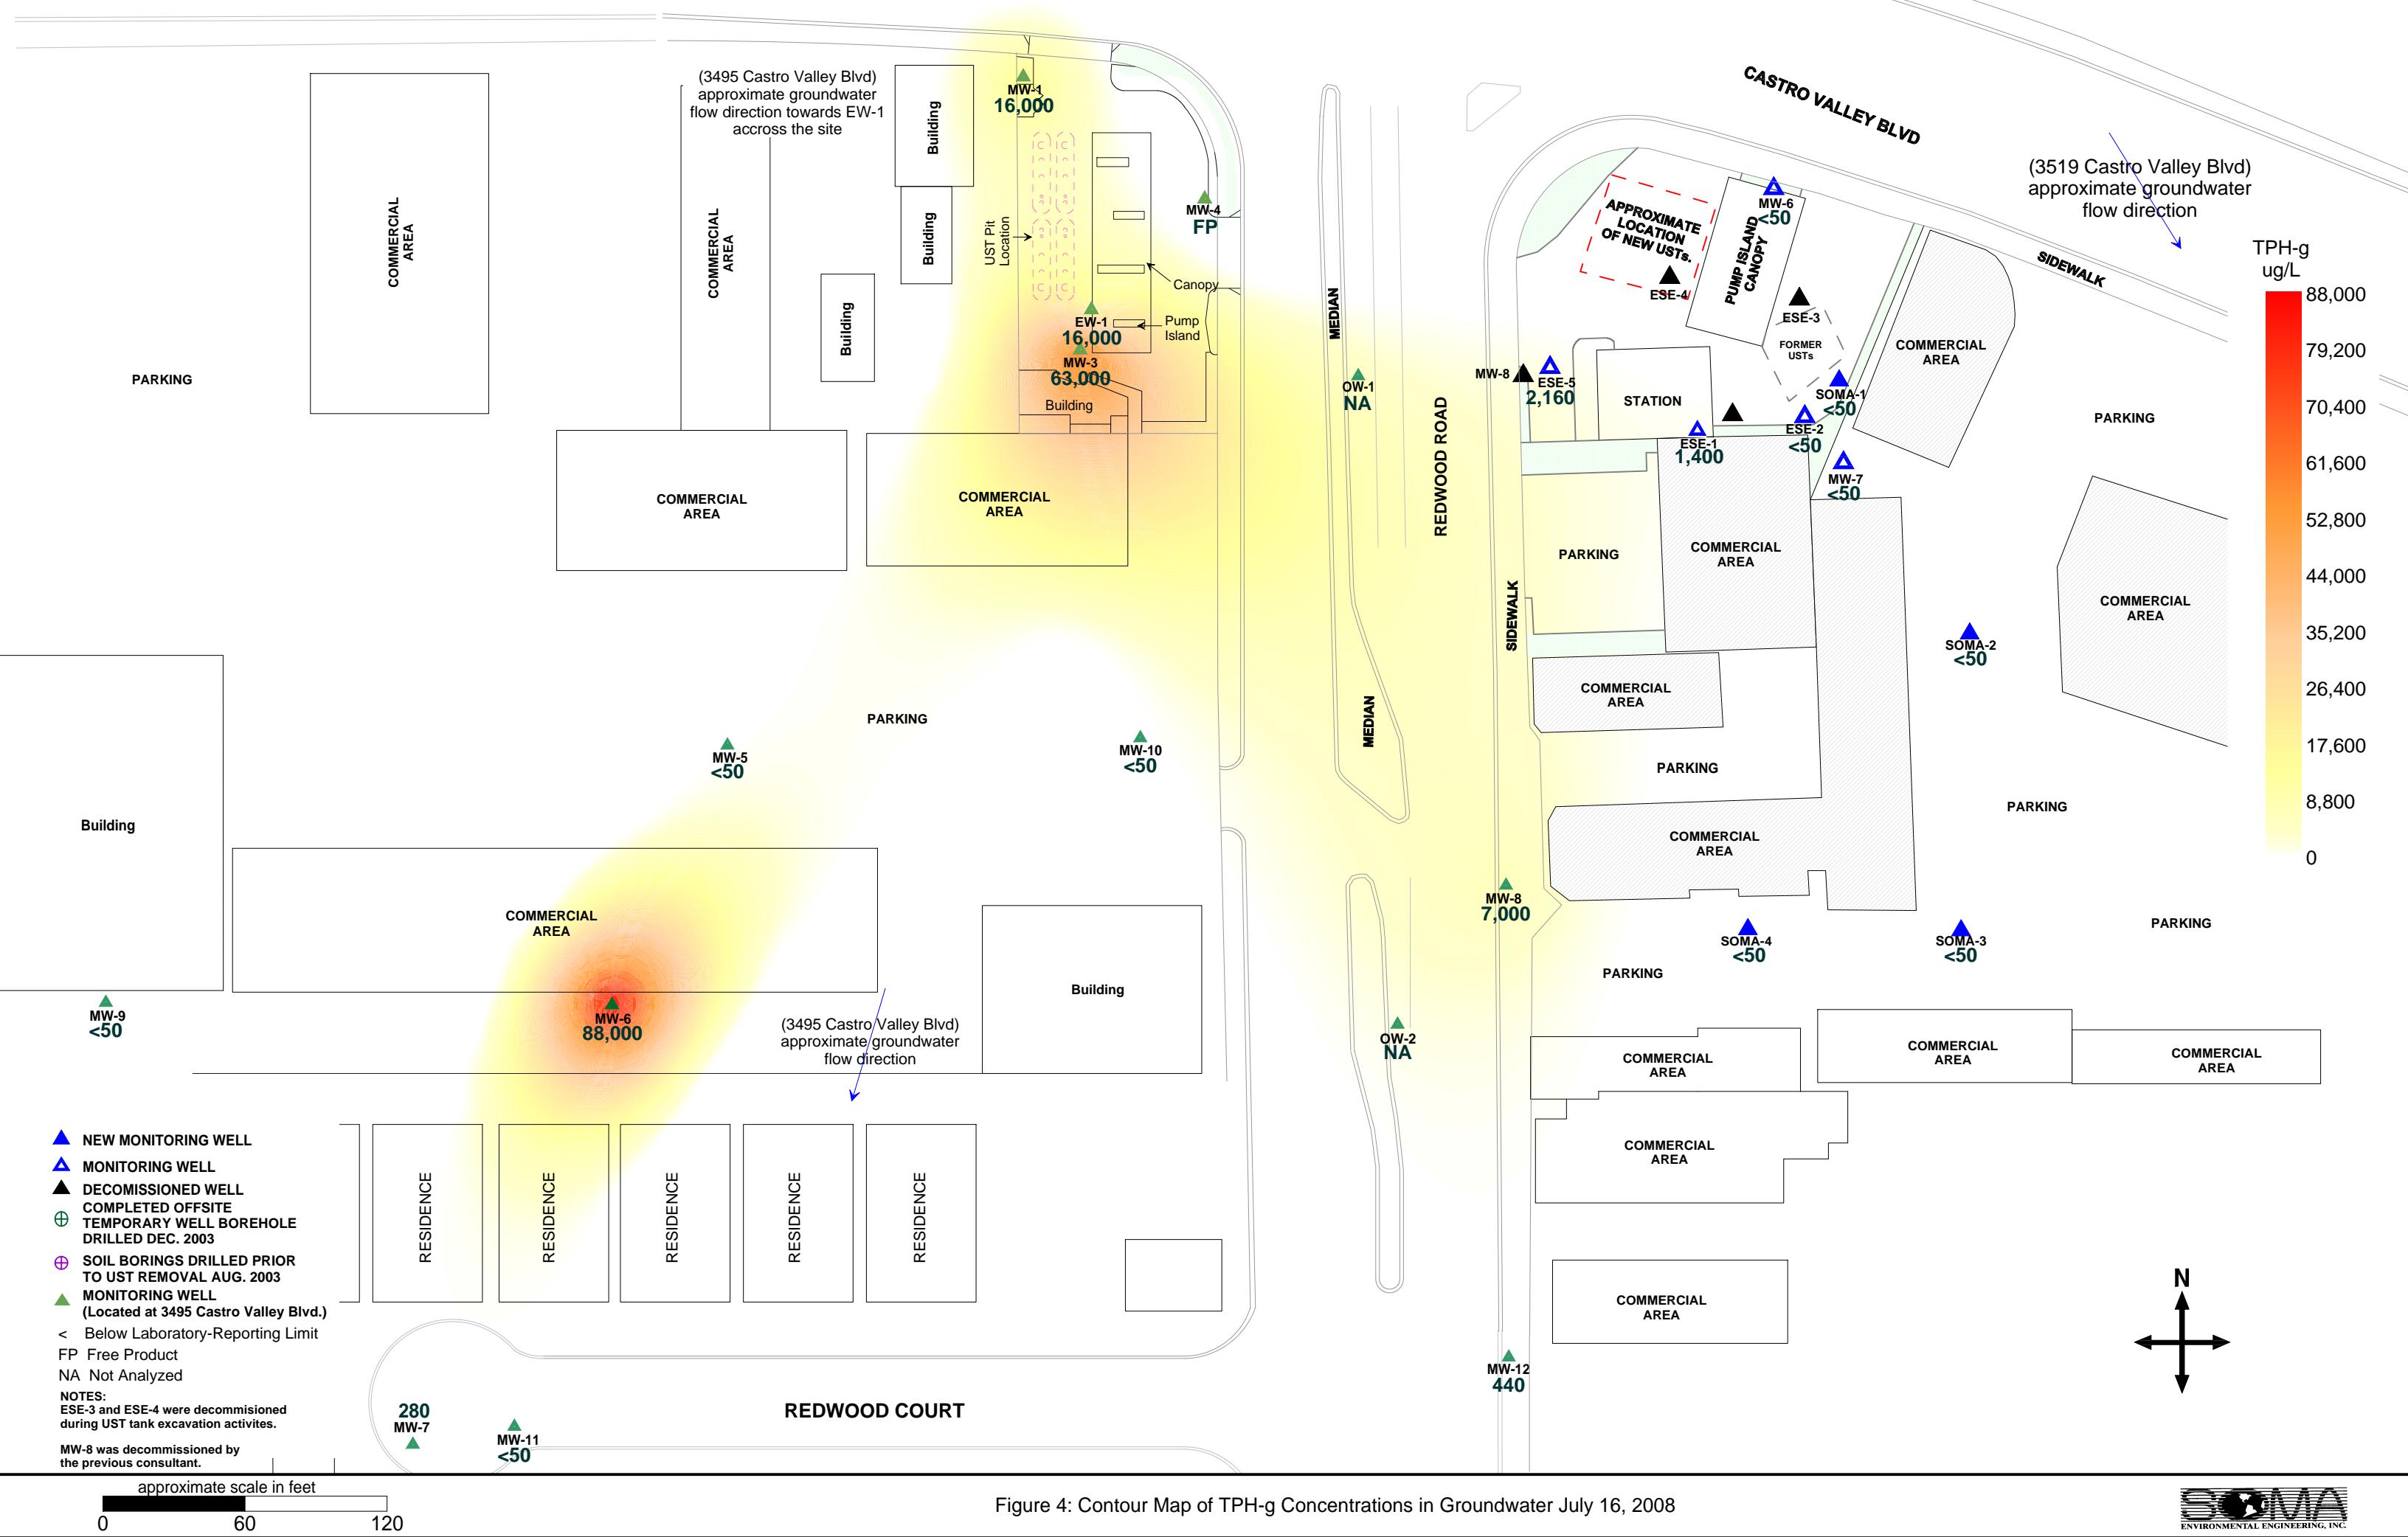

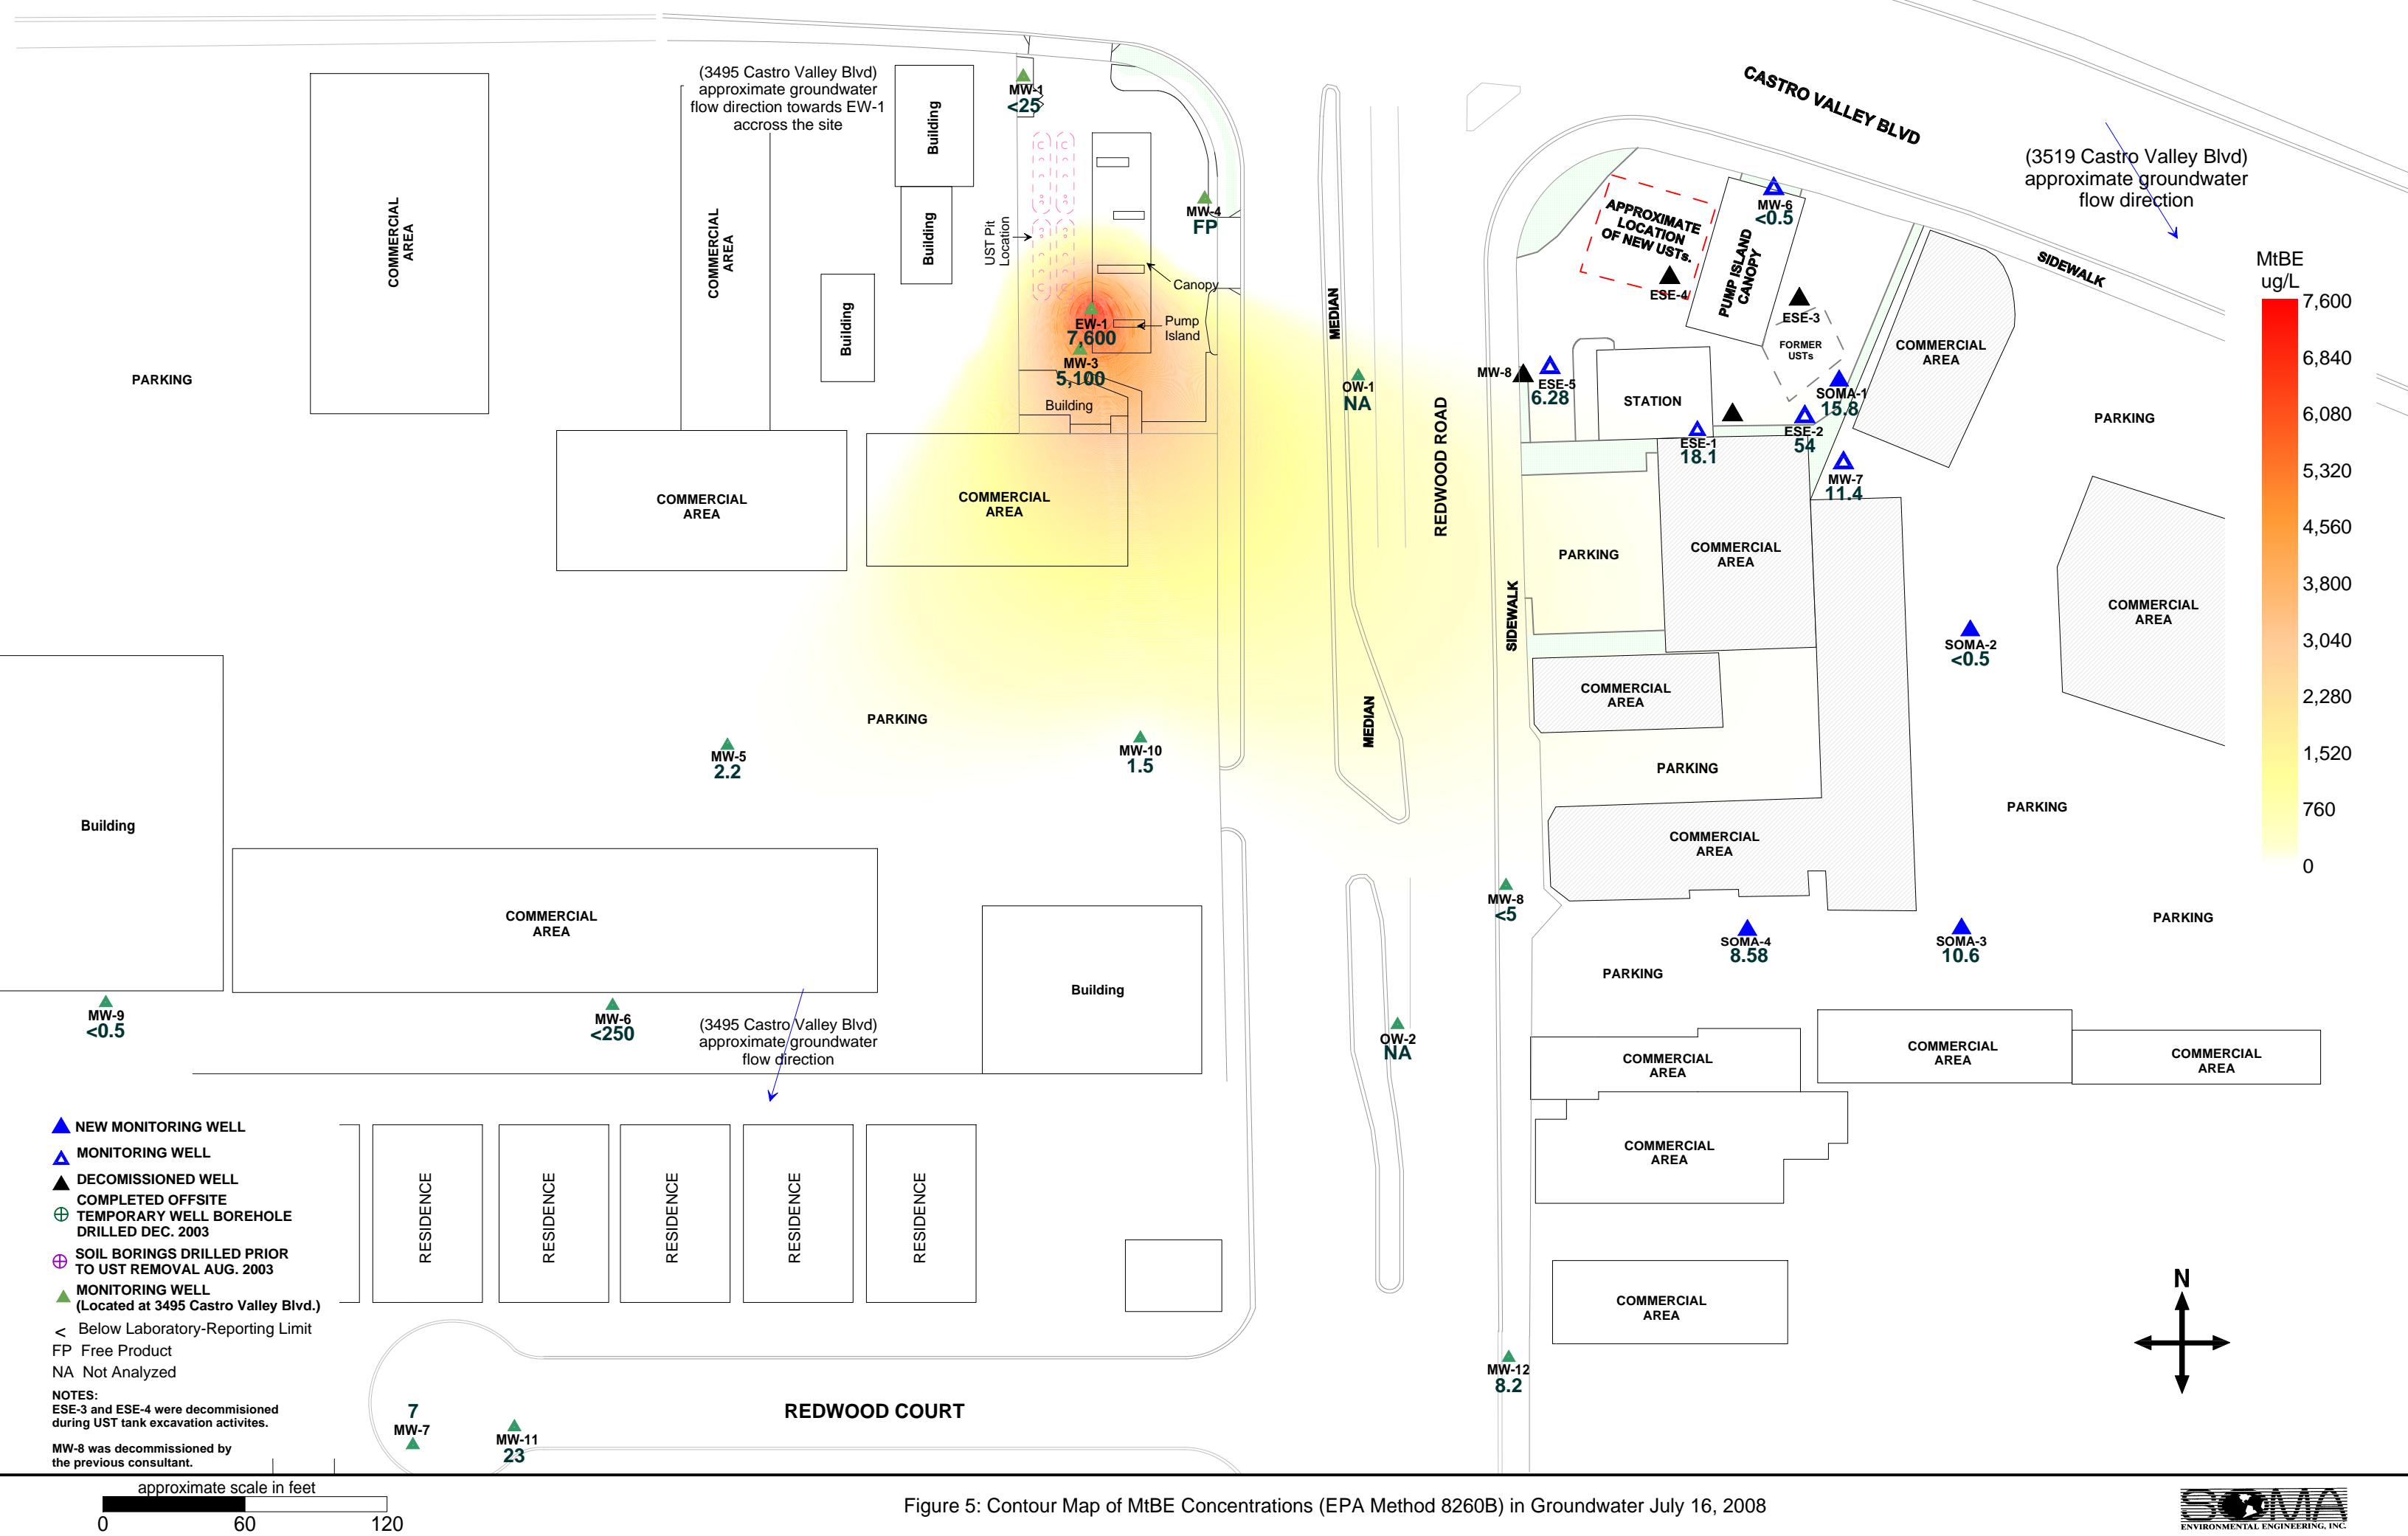

Figure 3: Groundwater Elevation Contour Map in Feet July 16, 200

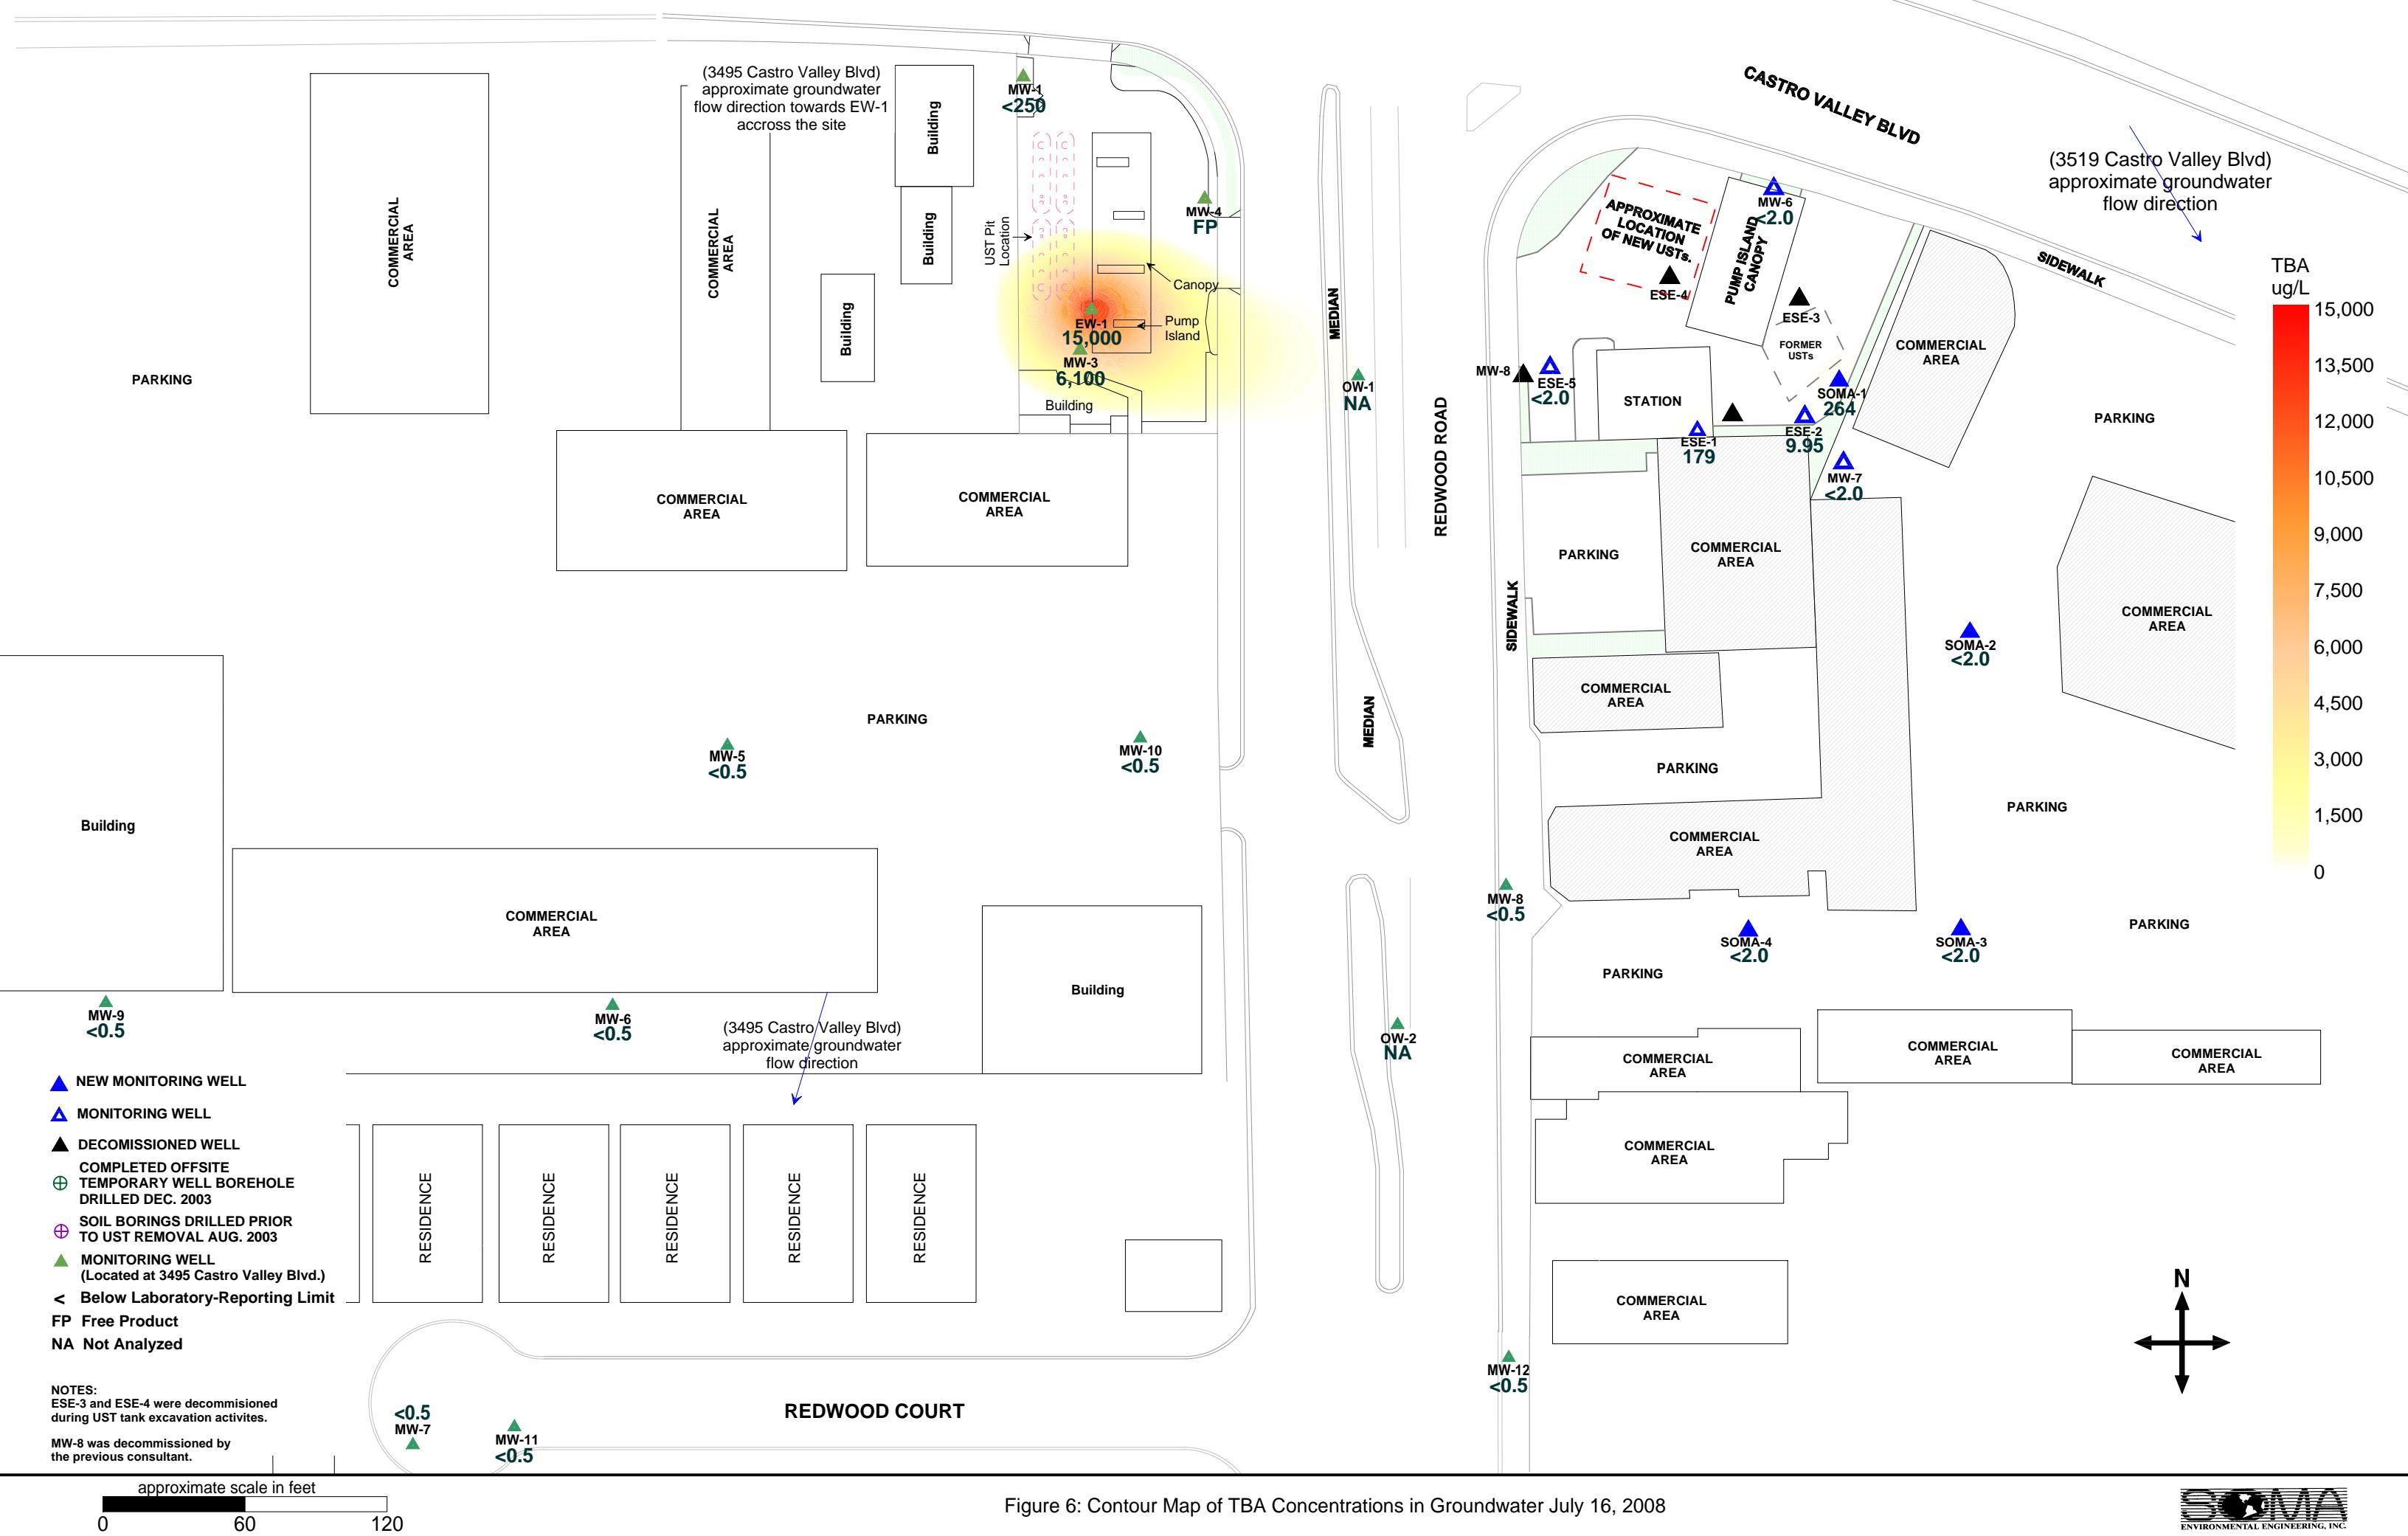

Figure 6: Contour Map of TBA Concentrations in Groundwater July 16, 2008

Appendix A

Standard Operating Procedures for
Conducting Groundwater Monitoring Activities

Standard Operating Procedures for Conducting Groundwater Monitoring Activities

Water Level Measurements

Prior to measurement of groundwater depth at each monitoring well, equalization with the surrounding aquifer must be achieved. Initially, the well cap is removed and the pressure is allowed to dissipate, creating a more stable water table level within the well. After about 10-15 minutes, once the water level in the well stabilizes, the depth to groundwater in each monitoring well is measured from the top of the casing to the nearest 0.01 foot using an electric sounder.

Purging and Field Measurements

Prior to sample collection, each monitoring well is purged using a battery-operated, 2-inch-diameter pump (Model ES-60 DC). To ensure that final samples are in equilibrium with, and representative of, the surrounding groundwater, during purging several samples are taken for field measurements of pH, temperature and electrical conductivity (EC). These parameters are measured with a Hanna pH, conductivity, and temperature meter. Equipment is calibrated on-site using standard solutions and procedures provided by the manufacturer.

The pH of groundwater has an effect on the activity of microbial populations in the groundwater. The groundwater temperature affects the metabolic activity of bacteria. The groundwater EC is directly related to the concentration of total dissolved solids (TDS) in solution.

Purging continues until these parameters stabilize or three casing volumes are purged.

Sampling

For sampling purposes, after purging a disposable polyethylene bailer is used to collect sufficient samples from each monitoring well for laboratory analyses. Groundwater samples are transferred to 40-mL VOA vials and preserved with hydrochloric acid. The vials are sealed to prevent air bubbles from forming within the headspace. For TPH-d analysis, groundwater samples are collected using 1-L, amber, nonpreserved glass containers. Samples are placed in an ice-filled cooler and maintained at 4°C. A chain of custody form for all samples is prepared to accompany the samples, which are promptly delivered to a California state-certified analytical laboratory.

BENCH MARK: NGS Bench mark No.PID# HT0223

THE STATION IS LOCATED IN THE CITY OF HAYWARD AT THE RAILROAD CROSSING OF THE SOUTHERN PACIFIC RAIL-ROAD AND BLOSSOM WAY, IN THE TOP OF THE NORTHWEST CURB OF BLOSSOM WAY.

TO REACH THE STATION FROM THE JUNCTION OF U S HIGHWAY 880 ON WEST A STREET, GO SOUTHEAST ON WEST A STREET FOR 0.2 MILES TO A CROSSROAD, HATHAWAY AVE ON THE LEFT, SANTA CLARA STREET ON THE RIGHT. TURN LEFT, NORTH, ON HATHAWAY AVENUE AND CONTINUE FOR 0.7 MILES TO WEST BLOSSOM WAY. TURN RIGHT, NORTH, ON WEST BLOSSOM WAY AND CONTINUE FOR 0.25 MILES TO THE STATION ON THE LEFT, JUST PAST THE RAIL-ROAD TRACKS.

THE STATION IS 48.95 M (160.6 FT) NORTHEAST OF THE NORTHEAST RAIL,
7.01 M NORTHWEST OF THE CENTER OF BLOSSOM WAY, 0.24 M (0.8 FT)
NORTH OF THE NORTH CORNER OF A STEEL GRATE IN THE STREET, 5.6 M
(18.5 FT) SOUTHWEST OF A POWER POLE AND 0.12 M (0.4 FT) HIGHER THAN
THE STREET.

NOTES:

TPH-G = Total Petroleum Hydrocarbons as Gasoline.

TPH-D = Total Petroleum Hydrocarbons as Diesel.

MTBE = Methyl tert-Butyl Ether.

ND = Not Detected.

-- = Not Analyzed.

a = Laboratory analytical report note: lighter than water immiscible sheen present on the sample.

b = Laboratory analytical report note: TPH-D results consist of both diesel-range and gasoline-range compounds.

c = Laboratory analytical report note: TPH-D results consist of gasoline-range compounds.

d = Laboratory analytical report note: TPH-D results consist of both oil-range and gasoline-range compounds.

e = Laboratory analytical report note: TPH-D results consist of oil-, gas, and diesel-range compounds.

+ = Analyzed by EPA Method 8260.

* = This column summarizes results for analysis using EPA Method 8260 for non-MTBE fuel oxygenates (TAME, DIPE, ETBE, and TBA) or lead scavengers (EDB, 1,2-DCA/EDC).

Results in milligrams per liter (mg/L), unless otherwise indicated.

NOTES:

TPH-G = Total Petroleum Hydrocarbons as Gasoline.

TPH-D = Total Petroleum Hydrocarbons as Diesel.

MTBE = Methyl tert-Butyl Ether.

ND = Not Detected.

-- = Not Analyzed.

a = Laboratory analytical report note: lighter than water immiscible sheen present on the sample.

b = Laboratory analytical report note: TPH-D results consist of both diesel-range and gasoline-range compounds.

+ = Analyzed by EPA Method 8260.

* = This column summarizes results for analysis using EPA Method 8260 for non-MTBE fuel oxygenates (TAME,

DIPE, ETBE, and TBA) or lead scavengers (EDB, 1,2-DCA/EDC).

Results in milligrams per liter (mg/L), unless otherwise indicated.

NOTES:

TPH-G = Total Petroleum Hydrocarbons as Gasoline.

TPH-D = Total Petroleum Hydrocarbons as Diesel.

MTBE = Methyl tert-Butyl Ether.

ND = Not Detected.

-- = Not Analyzed.

a = Laboratory analytical report note: lighter than water immiscible sheen present on the sample.

b = Laboratory analytical report note: TPH-D results consist of both diesel-range and gasoline-range compounds.

h = Laboratory analytical report note: heavier gasoline range compounds are significant (aged gasoline?).

* = This column summarizes results for analysis using EPA Method 8260 for fuel oxygenates (MTBE, TAME, DIPE, ETBE, and TBA) or lead scavengers (EDB, 1,2-DCA/EDC).

Results in milligrams per liter (mg/L), unless otherwise indicated.

Non-Hazardous Waste Manifest for Groundwater Removal

08110815

NON-HAZARDOUS WASTE MANIFEST		1. Generator ID Number CAL0000162251	2. Page 1 of 1	3. Emergency Response Phone NRCES 510-749-1390	4. Waste Tracking Number 36764-05
5. Generator's Name and Mailing Address AZIM SHAKOORI 3519 CASTRO VALLEY BLVD. CASTRO VALLEY, CA 94546		Generator's Site Address (if different than mailing address) Alt AZIM SHAKOORI			
Generator's Phone: 510 889 0678					
6. Transporter 1 Company Name NRC ENVIRONMENTAL SERVICES INC.		U.S. EPA ID Number CAR00000301			
7. Transporter 2 Company Name		U.S. EPA ID Number			
8. Designated Facility Name and Site Address Crosby & Overton, Inc. 1630 W. 17th Street Long Beach, CA 90813		U.S. EPA ID Number			
Facility's Phone: 562 443 5445					
9. Waste Shipping Name and Description NON-HAZARDOUS WASTE LIQUID (PROFILE #51545)/PURGE WATER		10. Containers No. Type	11. Total Quantity	12. Unit Wt./Vol.	
13. Special Handling Instructions and Additional Information WEAR APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT JOB# PO# 99674-05 CONSULTANT: SOMA ENVIRONMENTAL, 6620 CHINA DRIVE, SUITE A, BREA SANTON, CA (2761)					
14. GENERATOR'S CERTIFICATION: I certify the materials described above on this manifest are not subject to federal regulations for reporting proper disposal of Hazardous Waste.					
Generator's/Officer's Printed/Typed Name Elizabeth Hightower for SOMA		Signature <i>Elizabeth Hightower</i>		Month Day Year 108 08 08	
15. International Shipments <input type="checkbox"/> Import to U.S. <input type="checkbox"/> Export from U.S.		Port of entry/exit:			
Transporter Signature (for exports only):		Date leaving U.S.:			
16. Transporter Acknowledgment of Receipt of Materials					
Transporter 1 Printed/Typed Name Gary Scott		Signature <i>Gary Scott</i>		Month Day Year 108 08 08	
Transporter 2 Printed/Typed Name		Signature		Month Day Year	
17. Discrepancy					
17a. Discrepancy Indication Space <input type="checkbox"/> Quantity <input type="checkbox"/> Type <input type="checkbox"/> Residue <input type="checkbox"/> Partial Rejection <input type="checkbox"/> Full Rejection		Manifest Reference Number:			
17b. Alternate Facility (or Generator)		U.S. EPA ID Number			
Facility's Phone:					
17c. Signature of Alternate Facility (or Generator)		Month Day Year			
ALVARO MUJARRA		Signature <i>Alvaro MuJarra</i>		Month Day Year 111108	
18. Designated Facility Owner or Operator: Certification of receipt of materials covered by the manifest except as noted in Item 17a					
Printed/Typed Name ALVARO MUJARRA		Signature <i>Alvaro MuJarra</i>		Month Day Year 111108	
DESIGNATED FACILITY TO GENERATOR
