**Quarterly Monitoring Report**  
**2st Quarter 1996**

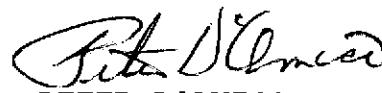

Dear Ms. Leech:

Enclosed, please find the **1st Quarterly Monitoring Report** for  
Thrifty Service Station #054, dated **August 10, 1996.** *10/10/96*

I certify under the penalty of law that this document and all attachments are prepared under my direction in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. The information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any question, please call Raymond C. Friedrichsen or myself at (310) 923-9876.

Respectfully,

  
PETER D'AMICO  
Manager  
Environmental Affairs

RE: **Thrifty Oil Co. Station #054**  
*2504 Castro Valley Boulevard*  
*Castro Valley, California*  
**2nd QUARTER REPORT, 1996**

Dear Ms. Leach,

This letter report presents the results of soil/groundwater treatment and site monitoring during the 2nd quarter of 1996 at the subject site. The approximate location of the on- and off-site monitoring wells are shown on **Figure 1**. All monitoring is conducted by Earth Management Co. (EMC) of Santa Fe Springs, California.

### **Site Monitoring and Sample Collection**

The site was visited on June 19, 1996, by an EMC technician in order to gauge the wells and collect groundwater samples. Water levels were measured in each well from the rim of the well cover using a Marine Moisture Tape (nearest 0.01 feet) capable of also measuring the presence of free floating hydrocarbons. *Depth to water* ranged from about 3.80 to 7.80 feet below grade which is consistent with previous data collected. **As of June 19, 1996, no wells exhibited free product visible as a sheen or film.** The depth to water data was used in conjunction with the recent survey data to determine groundwater elevations across the site. The interpretation of groundwater flow across the site is depicted on **Figure 1**. In general, the **groundwater flow was to the east** at a calculated gradient of about 0.04 feet per foot.

Prior to collecting groundwater samples from the wells, about 4 well volumes of groundwater was removed using a PVC bailer. During the purging process, the pH, conductivity and temperature were checked and recorded to insure formation water was entering the well to be sampled. Approximately 8 to 40 gallons of water were removed from each well and stored in 55 gallon D.O.T. approved drums pending disposal or discharge through the treatment unit. Groundwater samples were collected with a Teflon bailer. Samples were maintained and transported in 40 milliliter vials placed on ice pending delivery to American Analytics, a state certified analytical laboratory headquartered in Chatsworth, California. Field monitoring sheets prepared by EMC personnel are included in **Appendix A**.

*MTBE results  
are messy*

## Analytical Results

Groundwater samples were analyzed for total petroleum hydrocarbons (TPH) and volatile aromatic compounds (BTEX) using EPA methods 8015 and 8020, respectively. Copies of the laboratory analysis reports are attached in **Appendix B**. A summary of the results are presented in **Table 1**. Isoconcentration maps of TPH and benzene based on the June sampling event are presented as **Figures 2 and 3**.

## Treatment Unit Operation Status

Based on the data obtained by EMC, the RSI-SAVE unit operated 323 hours during the reporting period and 12,762 hours total (current meter reading 9314). As of June 20, 1996, a total of about 16,420.4 gallons of water (current meter reading 1213) had been processed by the unit and discharged to the local sanitary sewer. During the 2nd quarter reporting period, 604 gallons of water had been processed by the treatment unit and were discharged to the sanitary sewer. Effluent samples of the groundwater portion of the treatment unit were collected in May and June of 1996. The effluent sample concentrations were less than detectable and the data is included in **Appendix B**.

In order to monitor the effects of soil vapor removal, field vapor measurements are collected and recorded from each recovery well on a monthly basis. No well head vapor data was collected during this reporting period. However, treatment unit effluent samples were collected in April, May, and June. The effluent sample concentrations were less than detectable. The historical well vapor data is included in **Table 2** and the effluent vapor data is included in **Appendix B**.

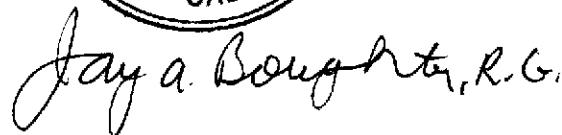

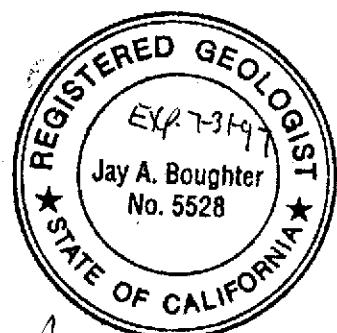

## Closing

Thrifty will continue to conduct quarterly groundwater monitoring at the site. The next quarterly report should be available in November of 1996. If you have any questions, please contact either the undersigned or Ray Friedrichsen at (310) 923-9876.

Very truly yours,

Peter D'Amico  
Manager Environmental Affairs

Benzene, toluene, ethylbenzene, and xylene analyzed by EPA method 8020 and concentrations reported in ug/l.

Total petroleum hydrocarbons analyzed by EPA method 8015 and concentrations reported in ug/l.

NSC = Not sampled due to product film on groundwater.

ND = Not Detected.

NA = Not Analyzed.
