RE: **Thrifty Oil Co. Station #054**  
2504 Castro Valley Boulevard  
Castro Valley, CA  
***2nd Quarter 1999, Status Report***

Dear Mr. Seery:

Presented herein is the Second Quarter 1999, Status Report prepared for Thrifty Oil Co. (Thrifty) Station #054 located at 2504 Castro Valley Boulevard, Castro Valley, California (**Figure 1**). Presented in this report are the results of the quarterly groundwater monitoring program conducted on June 22, 1999. Thrifty has retained the services of Earth Management Company (EMC) to conduct quarterly monitoring and sampling activities at this site.

## Groundwater Monitoring

Depth to groundwater is measured in each monitoring well on a quarterly basis. Historic gauging groundwater data obtained from April 11, 1988 through June 22, 1999 is presented in **Table 1**. In general, groundwater occurs under water table conditions beneath the station at depths ranging from 3.70 feet below ground surface (bgs) in monitoring wells RE-2 and RS-9 to 11.00 feet bgs in monitoring well RS-11, as measured on June 22, 1999. Field monitoring reports are included in **Appendix A**. Groundwater elevation contour map based on the June 22, 1999 data is presented in **Figure 1**. ~~The general direction of groundwater flow beneath the site is to the east at a gradient ranging from 0.07 to 0.13 feet/feet, with localized water table mounding.~~

## Quarterly Groundwater Sampling

As part of the on-going groundwater monitoring program, groundwater samples were obtained from monitoring wells PW-1, RE-1 through RE-7, and RS-8 through RS-11 on June 22, 1999. Monitoring well PW-2 was purged but inadvertently not sampled during this sampling event. Groundwater

samples were obtained by EMC and delivered in a chilled state in an ice chest following strict Chain-of-Custody procedures to state-certified American Analytics laboratory, Chatsworth, California. Water samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA method 8020, and MTBE concentrations were verified by EPA method 8260. Total petroleum hydrocarbons (TPH-g) were analyzed by EPA method 8015 modified for gasoline. A summary of historical analytical sampling results are provided in **Table 1**. Copies of the EMC Field Status Reports are presented in **Appendix A**, and copies of the laboratory analytical reports are contained in **Appendix B**.

TPH-g, benzene, and MTBE concentrations appear in Table 1 and Appendix B. The TPH-g, benzene, and MTBE isoconcentration maps are presented in **Figure 2, 3, and 4**.

### **Remediation System Operation Status**

The soil and groundwater remediation system was designed and installed by Remediation Services Int'l (RSI) and has been in operation at the site since November 1989. The treatment compound consists of a Ford internal combustion engine, spray aeration tower, two activated carbon canisters and gauging instruments. The hydrocarbon laden vapors from the extraction wells are burned as fuel by the engine, and extracted water is being treated by carbon. The engine is equipped with a catalytic converter for exhaust emission reduction.

### **Water**

As of March 15, 1999, a total of about 27,922 gallons of water (current meter reading 11,832) had been processed by the unit and discharged to the local sanitary sewer. ~~This unit was non-operational during the 1st and 2nd Quarters of 1999 the system's compressor needed to be replaced.~~ It is anticipated that the system will be restarted during the Third Quarter 1999.

### **Vapor**

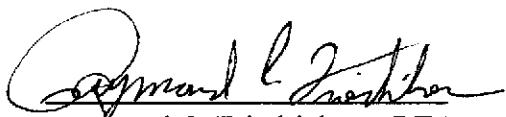

Wells RE-1, RE-3, RE-6, and RE-7 are connected to the vapor remediation system, and were all operating this quarter. The vapor system was operational from April 6, 1999 through June 28, 1999 for a total of 1,121 hours. The system was non-operational at various times through the quarter due to system maintenance. The system was maintained by EMC, and the RSI-SAVE unit operated 1,121 hours, bring the total operation hours to 22,288 (current meter reading 18,130). Treatment unit effluent vapor samples were collected during the operational period, and TPH-g, benzene, and MTBE were below the laboratory detection limit. Field status reports for the vapor monitoring system are located in **Appendix A**. Copies of laboratory analytical reports are located in **Appendix B**, and the system vapor results are presented in **Appendix C**.

### **Planned Activities**

Groundwater monitoring, gauging, and sampling at this site will continue on a quarterly basis. Thrifty will evaluate the efficiency of the vapor extraction system. Once this analysis is complete, Thrifty will then make their recommendations in a separate report. Thrifty anticipates that the groundwater system will be operational during the Third Quarter 1999.

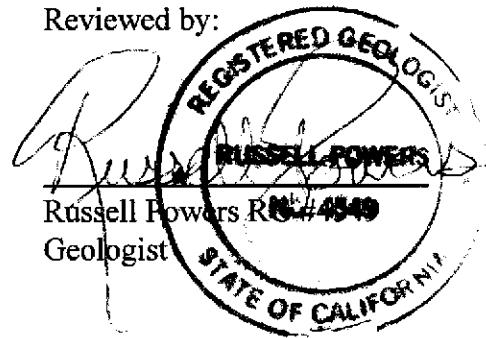

All interpretations expressed in this report are based upon the review of data collected by Earth Management Company. If you have any questions please contact the undersigned at (562) 921-3581 X376.

## LABORATORY ANALYSIS RESULTS

Page 1

Client: Thrifty Oil Company  
Project No.: N/A  
Project Name: SS #054 ✓  
Sample Matrix: Vapor  
Method: EPA 8015M(Gasoline)

AA Project No.: A135054-94 ✓  
Date Received: 05/06/99  
Date Reported: 05/12/99  
Units: ppmV

| AA I.D. No. | Client I.D. No. | Date Sampled | Date Analyzed | Results | MRL |
|-------------|-----------------|--------------|---------------|---------|-----|
| 87346       | Inlet           | 05/05/99     | 05/06/99      | <5      | 5   |

MRL: Method Reporting Limit  
<: Not detected at or above the value of the concentration indicated.
