Subject: 95607 - 5269 Crow Canyon Road, Castro Valley Chevron Site Update

Hi Mark,

As the new Project Manager on the 5269 Crow Canyon Road, Castro Valley Chevron site, I just wanted to give you a quick update on where we are with the project.

ENGEO has conducted the geotechnical investigation of the retaining wall and they believe reinforcements are required for wall stability, prior to emplacement of the remediation system. We are discussing the recommendations and will be working with Chevron on a course of action. Additionally, CRA is evaluating the existing remediation system design plans and will be optimizing them in the next few weeks, prior to meeting with Chevron's remediation review team near the end of the year.

Please feel free to contact me if you have any questions.

Regards,

Tina M. Hariu, P.G. 5907, C.HG. 346
