Judy,
Information from the former location of well C-15 would likely be useful; however, the consistency of the rose diagram flow direction indicates that a well downgradient of C-9 would fill a data gap in the perimeter of the well network. As mentioned in the second Technical Comment in the letter, C-15 appears lateral to the flowpath.

Hi Mark – Regarding the installation of wells downgradient of C-9 in order to define the contaminant plume, which is requested in the attached letter. We would like to propose replacing well C-15. We are currently planning to start the drilling field work to install the extraction wells on 12/16 and would like to include the replacement of C-15 with that work so that we can conduct the drilling in one mobilization. I'm planning to get you a scope of work to replace the well and hope that it will be acceptable in lieu of a work plan. Let me know if this plan is not acceptable.

Thanks

Judy A. Gilbert
