LETTER OF AGENCY

QUIK STOP MARKET #84 - APN 416-100-50
2881 Grove Way, Castro Valley, CA 94546

QUIK STOP MARKET #88 - APN 84A-181-56-2
20757 Lake Chabot Road, Castro Valley, CA 94546

This letter authorizes the firm of Robert H. Lee & Associates, Inc. (a.k.a. RHL Design Group Inc.), and its employees to act as our agent, on our behalf, for the purpose of securing Commercial Development Permits, Conditional Use Permit Amendments, Architectural Review Board Approvals, Building Permits, Miscellaneous Permits, and Permits required for the removal of existing and construction of new retail fuel storage and dispensing systems at our sites referenced above.

This authorization includes signing and filing applications or other documents, the payment of fees, the obligation for payment of fees where they are determined by actual agency costs, and representation in discussions, meetings, or hearings.

Mike Karvelot
Director of Environmental Affairs

Attention: Mr. Mike Karvelot

Subject: Tank Closure Report
Underground Storage Tank Removal, Quik Stop No. 88
20757 Lake Chabot Road, Castro Valley, California
(CCI Project No. 12139-1)

Dear Mr. Karvelot:

Compliance & Closure, Inc. (CCI) is pleased to present this Closure Report related to the removal of the underground storage tanks at Quik Stop Market No.88, located at 20757 Lake Chabot Road in the City of Castro Valley, Alameda County, California.

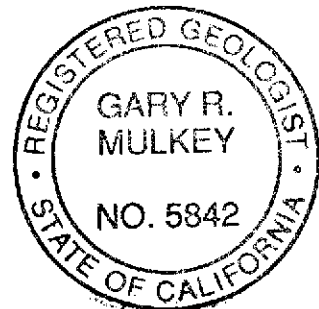

All procedures, pertinent documents and sampling techniques are included in the report, as well as a summary of the laboratory soil analysis results.

If you have any questions regarding this report, please call me at (925) 426-5395.

Sincerely,
Compliance & Closure, Inc.

Richard A. Garlow
Project Geologist

Gary R. Mulkey, R.G. 5842

TANK CLOSURE REPORT

**QUIK STOP MARKET No. 88
20757 LAKE CHABOT ROAD
CASTRO VALLEY, CALIFORNIA**

FOR

QUIK STOP MARKETS, INC.

PREPARED BY:

COMPLIANCE & CLOSURE, INC.

PROJECT NO. 12139-1

March 1999

**TANK CLOSURE REPORT
UNDERGROUND STORAGE TANK REMOVAL**

**QUIK STOP MARKET NO. 88
CASTRO VALLEY, CALIFORNIA**

FOR

QUIK STOP MARKETS, INC.

Introduction

Compliance & Closure, Inc. (CCI) is pleased to present this Tank Closure Report related to the removal of the underground storage tanks at Quik Stop No. 88, located at 20757 Lake Chabot Road in the City of Castro Valley, Alameda County, California (Figure 1). This report has been prepared on behalf of Quik Stop Markets, Inc. for submittal to the Alameda County Health Agency, Department of Environmental Health (ACHADEH). The report presents the procedures and soil and groundwater sampling results associated with the removal of the two 10,000-gallon, underground fuel tanks at the subject site.

Site Description

The site is occupied by Quik Stop Market No. 88, which engaged in the retail sale of gasoline and convenience foods and products. As stated above, the site contained two gasoline underground storage tanks (USTs). It is CCI's understanding that the two old USTs were to be replaced by two new 12,000-gallon, double-walled, fiberglass USTs, located approximately 10 feet southeast of the former tank location. Figure 2 illustrates pertinent site features, including the locations of the former USTs.

Dan Brenton Construction, Inc. (Brenton Construction) of San Jose, California was contracted by Quik Stop Markets, Inc. (Quik Stop) to perform the tank excavations and the installation of the new fuel tanks, with CCI acting on behalf of Quik Stop to document the field activities, collect soil and groundwater samples, coordinate activities with the contractor and the ACHADEH, transported the samples to an analytical laboratory and prepare a final report for the closure of the fuel tanks at the site.

Scope of Work

The scope of work for this project included providing environmental oversight, regulatory communication, sampling and this tank closure report. Sampling of the excavated soil was not a part of this project. All excavated soil was transported to the Forward Incorporated facility in Stockton, California for profiling, treatment and reuse. Copies of the non-hazardous manifests indicate that 998.72 tons of soil were transported to the Forward facility in Stockton. Copies of these manifests are included as Appendix A.

UST Removal

At the time of CCI's arrival at the site on Tuesday, December 22, 1998, the USTs were exposed, the product had been pumped out and the tops of the two USTs were approximately 3 feet below ground surface (bgs). **Following the excavation activities it was noted that from appearance and odors, the granular backfill appeared to have been impacted by gasoline.**

The USTs were rendered inert by placing at least 15 pounds of dry ice per 1,000 gallons capacity into each UST. After any explosive vapors had been sufficiently displaced by dry ice, Scott Seery of the ACHADEH approved the USTs for removal. Also present were Mr. Kerry Brenton and his crew from Brenton Construction, and Mr. Richard Garlow of CCI. The 10,000-gallon UST closest to the Quik Stop Market, identified as **T-1 (see Figure 1), was removed first** and labeled with inventory number 25303. The other 10,000-gallon UST, identified as **T-2 was then removed** and labeled with inventory number 25304. The USTs were then placed on the ground for inspection. Both USTs had a black tar coating. A visual inspection of tanks revealed no apparent leaks or holes.

Following the inspection, the USTs were approved for transportation and were loaded on a truck operated by Ecology Control Industries for delivery to and disposal at Erickson, Inc. The Uniform Hazardous Waste Manifest is attached as Appendix B. The ACHADEH Hazardous UST Closure Inspection Report is attached as Appendix C.

Soil and Groundwater Sampling

After the USTs were removed, the excavation was inspected. The bottoms of the USTs had been at a depth of approximately 12 feet and water was observed at the bottom of the eastern half of the excavation. **Some of the soil had a grayish discoloration and a sheen was observed on the surface of the water.** While the sidewalls and bottom of most of the excavation appeared to be a silty clay, **fractured bedrock was encountered at the bottom of the eastern part of the excavation (nearest Lake Chabot Road).**

Under the direction of Mr. Scott Seery, an excavator was used to obtain samples from the bottom

of the western part of the excavation. Soil was excavated to a depth of approximately one to two feet below the bottom of the excavation. Two soil samples were collected in native soil approximately 2 feet below the bottom of the tanks. The soil samples were collected by pushing a 2 x 6-inch brass liner into the soil within the backhoe bucket. The samples were removed from the bucket, labeled, capped with aluminum foil and plastic caps, logged on a chain-of-custody form and placed into a cooler containing ice for transport to a state-certified laboratory.

Sampling of the fractured bedrock on the eastern end was attempted but was unsuccessful. As shown in Figure 2, the soil sample collected from beneath tank T-1 were identified as T-1-1 and the soil sample from beneath tank T-2 was identified as T-2-1. Due to most of the dispenser island area being excavated during the tank removal process, sampling of this area was not required.

The depth of the water at the bottom of the excavation was very shallow; therefore a hole was excavated to allow the groundwater to collect for sampling. The sample was collected and identified as GW-1. Due to the presence of discolored backfill in the excavation, it was decided to collect another groundwater sample after the backfill had been removed from the excavation. On Tuesday, December 29, 1998, another groundwater sample was collected, and identified as GW-2.

Laboratory Analysis and Analytical Results

All samples were analyzed at Entech Analytical Labs, Inc. (Entech), a laboratory certified by the California Department of Health Services to perform the specified analyses. Soil and groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-g), using Environmental Protection Agency (EPA) Method 8015M, the gasoline constituents benzene, toluene, ethylbenzene and total xylenes (BTEX) and the oxygenating compound methyl tertiary butyl ether (MTBE) using EPA Method 8020. MTBE was detected, therefore, a confirmatory analysis of the presence of MTBE was performed, using EPA Method 8240. The certified analytical reports and chains of custody are provided in Appendix D.

A total of two soil samples (T-1-1, T-2-1) were collected from the bottom of the western end of the excavation. As shown in Table 1, laboratory analytical results indicated that while benzene and toluene were not detected, very low concentrations of TPH-g, ethylbenzene, total xylenes and MTBE were detected in bottom samples T-1-1 and T-2-1.

Two samples of the water in the bottom of the excavation were also collected, GW-1 on December 22, 1998 and GW-2 on December 29, 1998. As shown in Table 2, laboratory analytical results of sample GW-1 indicated detectable concentrations of TPH-g (16,000 parts per billion [ppb]), BTEX (4.6 ppb, 12 ppb, 250 ppb and 1,400 ppb, respectively) and MTBE (20,000 ppb). In sample GW-2 much lower concentrations of TPH-g (400 ppb), ethylbenzene (0.54 ppb) total xylenes (4.5 ppb) and MTBE (6,700 ppb) were detected, while benzene and toluene were not detected.

Discussion

During the UST excavation and removal, a gasoline-like odor was noted, as well as visible discoloration of some of the soil, backfill and water in the excavation. During over-excavation activities, the discolored soil, backfill and most of the water was removed. Laboratory analytical results of the two soil samples collected indicated that low concentrations of TPH-g, some BTEX constituents and MTBE were detected in samples T-1-1 and T-2-1.

Laboratory analytical results of the two water samples collected indicated the presence of gasoline related compounds. In the water sample collected on December 22, 1998, TPH-g, BTEX and MTBE were detected. However, in the water sample collected on December 29, 1998, analytical results indicated that while TPH-g, ethylbenzene, total xylenes and MTBE were detected, they were detected in much lower concentrations. In addition the BTEX constituents benzene and toluene were not detected. It is possible that the groundwater could have been locally affected by the gasoline impacted backfill.

Conclusions and Recommendations

Based on data obtained during the tank excavation, visual observations, analytical laboratory results and the condition of the two fuel tanks at the time of their removal, it is concluded that some soil contamination occurred below the tanks at the subject site. Groundwater was encountered at the depths explored (up to 21 feet) within the tank excavation. Laboratory results on the groundwater samples collected from the excavation were reported to be contaminated with petroleum hydrocarbons. The source of the soil and groundwater contamination may be from overspill during filling of the tanks.

Based upon field observations and laboratory analytical results, it is CCI's opinion that further environmental work is necessary to define the extent of soil and groundwater contamination discovered during the fuel tank removal at the subject site.

A copy of this report should be forwarded to the following agency in a timely manner:

Mr. Scott O. Seery, CHMM
Senior Hazardous Materials Specialist
Department of Environmental Health
Alameda County Health Agency
1131 Harbor Bay Parkway, 2nd Floor
Alameda, CA 94502

Limitations

The discussion presented in this report is based on the following:

1. The observations of the field personnel;
2. The results of the laboratory analyses performed by a state-certified laboratory;
3. Our understanding of the regulations of the State of California and Alameda County.

It is possible that variations in the soil or groundwater conditions could exist beyond the points sampled for this report. Also, changes in groundwater conditions could occur at some time in the future due to variations in rainfall, temperature, regional water usage, or other factors.

The services performed by CCI have been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the Castro Valley area. No other warranty, express or implied, is made.

Please note that contamination of soil and groundwater must be reported to the appropriate agencies in a timely manner.

CCI includes in this report chemical analytical data from a state-certified laboratory. CCI has been informed that the analyses are performed according to procedures suggested by the U.S. EPA and State of California. CCI is not responsible for laboratory errors in procedure or result reporting.

FACILITY REQUIREMENTS

FORWARD INC. LANDFILL

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

FACILITY REQUIREMENTS

FORWARD INC. LANDFILL

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

FORWARD INC. LANDFILL

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

FACILITY REQUIREMENTS

FORWARD INC. LANDFILL

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.

UST CLOSURE
HAZARDOUS WASTE GENERATOR INSPECTION REPORT

STID #: 4091 FACILITY NAME: Quick Stop, 20757 Lk. Chabot Rd PG. 1 OF 1

SUPPLEMENTAL FORM

On-site to witness removal of two (2) 10,000 gallon steel gasoline USTs. The tanks are tar wrapped. Dispensers were configured along the tank complex.

Difficulty meeting the tanks to ACFD standards was experienced. After consultation w/ Mick Chawanko (ACFD inspector), the tanks were removed once LEL or O₂% were below 10% and LEL% was always < 20%.

1:00 Southern-most tank removed: tar wrapping was not present on the west end of tank from the "waist line" up. The tank appeared intact. No holes or corrosion evident.

1:20 Northern-most tank removed: similar condition as above. Tar wrapping missing above waist line on both ends.

Contamination was evident as the excavation was deepened.

Soil samples were ^{collected} from below each end of each tank. Only two (2) samples could be collected - ~~a total of four (4) samples~~. Shallow fractured bedrock was encountered at the NE side of excavation, however. Shallow GW was encountered @ the apparent bedrock/backfill interface, w/apparent FP.

* All samples to be analyzed for: TPH-E, BTEX, MTRE.

→ The hole was deepened to allow collection of GW samples. (~21' DG)

* No overexcavation occurs today; all backfill to be excavated/hauled off-site next week.

STANDARD LAB QUALIFIERS

July, 1998

All Entech lab reports now reference standard lab qualifiers. These qualifiers are noted in the adjacent column to the analytical result and are adapted from the U.S. EPA CLP program. The current qualifier list is as follows:

Qualifier	Description
U	Compound was analyzed for but not detected
J	Estimated valued for tentatively identified compounds or if result is below PQL but above MDL
N	Presumptive evidence of a compound (for Tentatively Identified Compounds)
B	Analyte is found in the associated Method Blank
E	Compounds whose concentrations exceed the upper level of the calibration range
D	Multiple dilutions reported for analysis; discrepancies between analytes may be due to dilution
X	Results within quantitation range; chromatographic pattern not typical of fuel

Entech Analytical Labs, Inc.

525 Del Rey Avenue, Suite E
Sunnyvale, CA 94086

STANDARD LAB QUALIFIERS

July, 1998

All Entech lab reports now reference standard lab qualifiers. These qualifiers are noted in the adjacent column to the analytical result and are adapted from the U.S. EPA CLP program. The current qualifier list is as follows:

Qualifier	Description
U	Compound was analyzed for but not detected
J	Estimated valued for tentatively identified compounds or if result is below PQL but above MDL
N	Presumptive evidence of a compound (for Tentatively Identified Compounds)
B	Analyte is found in the associated Method Blank
E	Compounds whose concentrations exceed the upper level of the calibration range
D	Multiple dilutions reported for analysis; discrepancies between analytes may be due to dilution
X	Results within quantitation range; chromatographic pattern not typical of fuel
