**SUBJECT:** Results of Quarterly Groundwater Monitoring, February 1997  
Former Penske Truck Leasing Facility  
725 Julie Ann Way, Oakland, California.

Dear Mr. Chan:

The above referenced report is being forwarded to you at the request of Penske Truck Leasing Co. The report details the results of the quarterly groundwater monitoring well sampling for February 1997 at the former Penske Truck Leasing Facility at 725 Julie Ann Way, Oakland. The quarterly sampling has been completed in response to the requirements for groundwater sampling contained in the Alameda County Health Care Services, Department of Environmental Health (ACHCSA) letter to Penske dated October 24, 1989.

If you have any questions, please do not hesitate to call.

Sincerely,  
**GERAGHTY & MILLER, INC.**

Paul V. Hehn, R.G.  
Project Geologist/Project Manager

Re: 1Q97 Quarterly Groundwater Monitoring Report  
Former Penske Truck Leasing Facility  
725 Julie Ann Way  
Oakland, CA

Dear Paul,

I have reviewed and approve the above referenced report. Please forward the appropriate number of copies to the required regulatory agencies. Please provide two copies for my file with a copy of your report transmittal letters to the agencies. If you have questions or need assistance please call my office at 610-775-6010.

Sincerely,

A handwritten signature in black ink that reads "Richard G. Saut".

Richard G. Saut

SUBJECT: Results of Quarterly Groundwater Monitoring  
February 1997  
Former Penske Truck Leasing Facility  
725 Julie Ann Way, Oakland, California.

Dear Mr. Saut:

This report presents the results of the quarterly groundwater monitoring performed on February 20, 1997, at the former Penske Truck Leasing Co. (Penske) facility referenced above (Figure 1). The scope of work for this project was presented to Penske in a Geraghty & Miller, Inc. (Geraghty & Miller) letter dated January 25, 1996. The scope of work for groundwater monitoring and sampling consists of collecting depth-to-water measurements, total-well-depth measurements, and water samples from selected wells at this former site. The scope of work also includes the preparation of quarterly groundwater sampling and monitoring reports based on the data and groundwater samples collected. This quarterly groundwater sampling and monitoring program is related to the containment zone (CZ) concept remedial approach approved by the Alameda County Health Care Services Agency (ACHCSA) and the California Regional Water Quality Control Board – San Francisco Bay Region (RWQCB) in its letter to Penske dated March 25, 1994.

#### **RECENT REVISIONS TO THE QUARTERLY GROUNDWATER SAMPLING**

Telephone conversations and written correspondence took place between Penske, the ACHCSA, and Geraghty & Miller about groundwater sampling and monitoring at this site. The ACHCSA stated in a letter to Penske dated October 23, 1996, that the previous compliance concentration for benzene in groundwater, 21 micrograms per liter ( $\mu\text{g}/\text{L}$ ), was too low. The ACHCSA referred to a recent study by the RWQCB at the San Francisco Airport in which an estuary compliance concentration for benzene of 71  $\mu\text{g}/\text{L}$  was deemed to be a more appropriate

concentration for groundwater near estuaries similar to the former Penske site. In a letter to Penske dated December 6, 1996, the ACHCSA agreed that the compliance concentration for benzene in groundwater at this site would be increased from the current 21 µg/L to the ACHCSA-recommended 71 µg/L. The ACHCSA further agreed that, if the new compliance concentration of 71 µg/L was exceeded in the guard wells (Wells MW-3 or MW-7), the corresponding downgradient compliance wells (Well MW-6 downgradient from Guard Well MW-3, and Well MW-8 downgradient from Guard Well MW-7) would be sampled during the next quarterly sampling event. During the current quarter, Compliance Well MW-8 was sampled at the request of the ACHCSA.

### FIELD PROCEDURES

The quarterly groundwater monitoring was performed on February 20, 1997. In accordance with the CZ remedial approach monitoring and sampling plan referenced above, monitoring was completed and groundwater samples were collected from Monitoring Wells MW-1 through MW-5, and MW-7. Compliance Well MW-8 was also monitored and sampled during this quarter as requested by the ACHCSA. The monitoring-well locations are shown in Figure 2.

Prior to sampling, depth-to-water measurements were obtained from all on-site wells. Additionally, the wells were checked for the presence of liquid-phase hydrocarbons. No liquid-phase hydrocarbons with a measurable thickness of greater than 0.01 foot were observed in any of the monitoring wells during this monitoring event. Each well sampled was purged of at least four casing volumes of water. At Penske's request, additional purging was performed to remove dissolved-phase petroleum hydrocarbons from the groundwater. The exact volume of water removed during the extra purging is unknown, but exceeded the minimum of four casing volumes. Prior to sampling each well, all equipment that entered the well was washed in a solution of nonphosphate detergent and water and then triple rinsed in deionized water. Purged water was monitored for pH, temperature, and specific conductance. A summary of the field data is presented in Table 1. Following purging, groundwater samples were collected using a new disposable polyethylene bailer for each well. The purged water was removed by a Penske-contracted vacuum truck for proper disposal.

A trip blank, consisting of a sample vial containing laboratory-grade water, accompanied the sample vials from the laboratory to the site and back to the laboratory, and was also submitted for analysis. The purpose of the trip blank is to assess whether any of the

compounds analyzed for may have been imparted to the samples by air in the vicinity of the sample bottles during shipping, by the sample container, by the preservative, or by other exogenous sources.

Groundwater samples were put into the appropriate USEPA-approved containers, placed on ice, and transported to Sequoia Analytical (Sequoia), in Walnut Creek, California, along with appropriate chain-of-custody documentation. The water samples were analyzed for total petroleum hydrocarbons (TPH) as gasoline (USEPA Method 8015, modified), for TPH as diesel (USEPA Method 8015, modified), for benzene, toluene, ethylbenzene, and total xylenes (BTEX) (USEPA Method 8020), and for total dissolved solids (TDS) (USEPA Method 160.1).

## RESULTS

### SHALLOW GROUNDWATER FLOW

A summary of the depth-to-water data is presented in Table 1. Depth to water ranged from 4.68 feet (Monitoring Well MW-5) to 6.36 feet (Monitoring Well MW-3) below the ground surface. A contour map based on the groundwater elevation data collected February 20, 1997, is presented in Figure 2. The historic shallow groundwater flow is toward the west; however, there are local variations in flow directions at the facility, as indicated by the groundwater contours from the data collected during February 1997.

The difference in the elevation of the groundwater surface between Wells MW-2 and MW-1 is 0.08 feet, producing a hydraulic gradient (slope of the groundwater surface) of approximately 0.0009 in a southwesterly direction.

### GROUNDWATER ANALYTICAL RESULTS

A summary of the groundwater analytical results is presented in Table 2. Copies of the certified laboratory reports and chain-of-custody documentation are included in Attachment 1. TPH as gasoline was detected in the groundwater samples from Monitoring Wells MW-1 (2,900 µg/L), MW-4 (64,000 µg/L), MW-7 (15,000 µg/L), and MW-8 (340 µg/L). TPH as diesel was detected in the groundwater samples collected from Monitoring Wells MW-1 (200,000 µg/L), MW-2 (1,000 µg/L), MW-3 (140 µg/L), MW-4 (470,000 µg/L), MW-5 (1,100 µg/L), MW-7 (1,500,000 µg/L), and MW-8 (2,500 µg/L). Benzene was detected in the groundwater samples collected from Monitoring Wells MW-1 (260 µg/L), MW-7 (81

$\mu\text{g/L}$ ), and MW-8 (2.1  $\mu\text{g/L}$ ). All other BTEX constituent results are presented in Table 2. TPH as gasoline and BTEX were not detected in the trip blank. Analysis of TDS in the groundwater samples detected concentrations ranging from 1,300 milligrams per liter ( $\text{mg/L}$ ) in Monitoring Well MW-5 to 3,800  $\text{mg/L}$  in Monitoring Well MW-8 (Table 2).

## FIELD PARAMETERS

As in all previous quarterly sampling events at this facility, the specific conductance measurements for the groundwater purged during the sampling continue to be high (Table 1). High concentrations of TDS were detected in the groundwater laboratory samples (Table 2).

## COMPLIANCE WITH CONTAINMENT ZONE APPROACH

Benzene was not detected at concentrations exceeding the new compliance concentration of 71  $\mu\text{g/L}$  in the shallow groundwater samples collected from designated CZ-concept Guard Wells MW-3 (Non-detect [ND]) and MW-5 (ND). The benzene concentration in the groundwater sample collected from Guard Well MW-7 (81  $\mu\text{g/L}$ ) exceeded the compliance concentration. At the request of the ACHCSA, Compliance Well MW-8 was sampled during this quarterly event. The benzene concentration detected in the groundwater sample collected from Compliance Well MW-8 (2.1  $\mu\text{g/L}$ ) was below the compliance concentration for benzene.

During this quarterly groundwater sampling event, the concentrations of TPH as gasoline increased in the groundwater samples from Wells MW-1 (from 65  $\mu\text{g/L}$  to 2,900  $\mu\text{g/L}$ ), MW-4 (from 52,000  $\mu\text{g/L}$  to 64,000  $\mu\text{g/L}$ ), and MW-7 (from 3,800  $\mu\text{g/L}$  to 15,000  $\mu\text{g/L}$ ). The concentrations of TPH as diesel increased in the groundwater samples from Wells MW-1 (from 1,500  $\mu\text{g/L}$  to 200,000  $\mu\text{g/L}$ ), MW-3 (from ND to 140  $\mu\text{g/L}$ ), MW-4 (from 40,000  $\mu\text{g/L}$  to 470,000  $\mu\text{g/L}$ ), MW-5 (from 610  $\mu\text{g/L}$  to 1,100  $\mu\text{g/L}$ ), and MW-7 (from 780,000  $\mu\text{g/L}$  to 1,500,000  $\mu\text{g/L}$ ). The concentration of benzene increased in the groundwater sample collected from Well MW-1 (from 3.3  $\mu\text{g/L}$  to 260  $\mu\text{g/L}$ ).

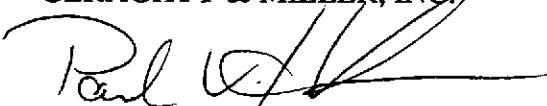

The concentration of TPH as gasoline decreased in the groundwater samples collected from Well MW-8 (from 400  $\mu\text{g/L}$  to 340  $\mu\text{g/L}$ ). The concentrations of TPH as diesel decreased in the groundwater samples collected from Well MW-2 (from 1,800  $\mu\text{g/L}$  to 1,000  $\mu\text{g/L}$ ). The concentrations of benzene decreased in the groundwater samples collected from Wells MW-3 (from 0.82  $\mu\text{g/L}$  to ND), MW-4 (from 130  $\mu\text{g/L}$  to ND [ $<100 \mu\text{g/L}$ ]), and MW-7 (from 130  $\mu\text{g/L}$  to 81  $\mu\text{g/L}$ ).

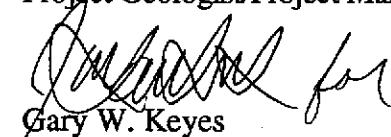

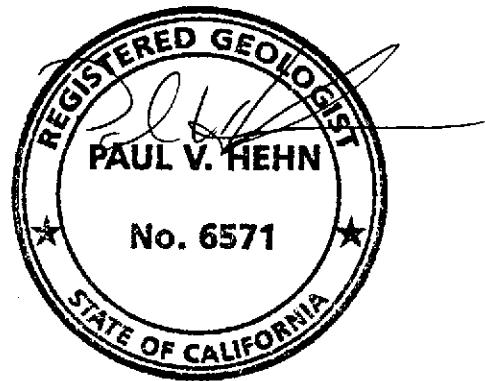

At the request of Penske, additional groundwater purging will be continued during future quarterly events. The additional purging will help remove petroleum hydrocarbons from the groundwater downgradient from the former tank excavation.

Geraghty & Miller appreciates the opportunity to be of service to Penske. If you have any questions regarding this report, please do not hesitate to call us.

Sincerely,  
GERAGHTY & MILLER, INC.

(a) Measured from top of PVC casing.

(b) Based on four casing volumes.

(c) All well elevations resurveyed to site benchmark on February 10, 1993.

(d) Well went dry during purging.

(e) No reading - instrument malfunction.

(f) Purge volume estimated using well depth-to-bottom measurements from previous quarter.

SC Specific Conductance

(µS/cm) Microsiemens per centimeter

NM Not measured

NS Well not sampled or monitored during this quarterly event.

All elevations are measured relative to a site benchmark (elevation 6.62') based on the City of Oakland datum which is 3 feet higher than mean sea level.

**Table 2: Summary of Groundwater Analytical Results - Monthly and Quarterly Sampling**  
 Former Penske Truck Leasing Facility,  
 725 Julie Ann Way, Oakland, California.

Well	Date	TPH Gasoline (a) (µg/L)	TPH Diesel (a) (µg/L)	Benzene (b) (µg/L)	Toluene (b) (µg/L)	Ethyl- benzene (b) (µg/L)	Xylenes (b) (µg/L)	Total Dissolved Solids (c) (mg/L)
(a)	Analyzed by USEPA Method 8015, modified.							
(b)	Analyzed by USEPA Method 8020.							
(c)	Analyzed by USEPA Method 160.1.							
(d)	No results - sample for TPH as diesel not collected.							
(e)	Diesel range concentration reported. A nonstandard diesel pattern was observed in the chromatogram.							
(f)	Does not match typical gasoline pattern. Pattern of peaks observed in the chromatograms is indicative of hydrocarbons heavier than gasoline.							
(g)	Detection limit increased due to insufficient sample amount.							
(h)	Diesel range concentration reported. The chromatogram shows only a single peak in the diesel range.							
(i)	Laboratory reports that chromatogram indicates unidentified carbons >C8.							
(j)	Laboratory reports that chromatogram indicates unidentified carbons >C9.							
(k)	Laboratory reports that chromatogram indicates gasoline and unidentified hydrocarbons >C8.							
(l)	Laboratory reports that chromatogram indicates diesel and unidentified hydrocarbons >C16.							
(m)	Laboratory reports that chromatogram indicates diesel and discrete peaks.							
(n)	Laboratory reports that chromatogram indicates diesel and unidentified hydrocarbons >C20.							
( )	Reported detection limit							
--	Not analyzed							
ND	Not detected							
µg/L	Micrograms per liter							
mg/L	Milligrams per liter							
NS	Well not sampled or monitored during this quarterly event.							

Analysis by Sequoia Analytical, Walnut Creek, California.

FIGURE

1

EXPLANATION

MW-1 ● Approximate location of existing groundwater monitor wells.

(0.34)

Groundwater elevation

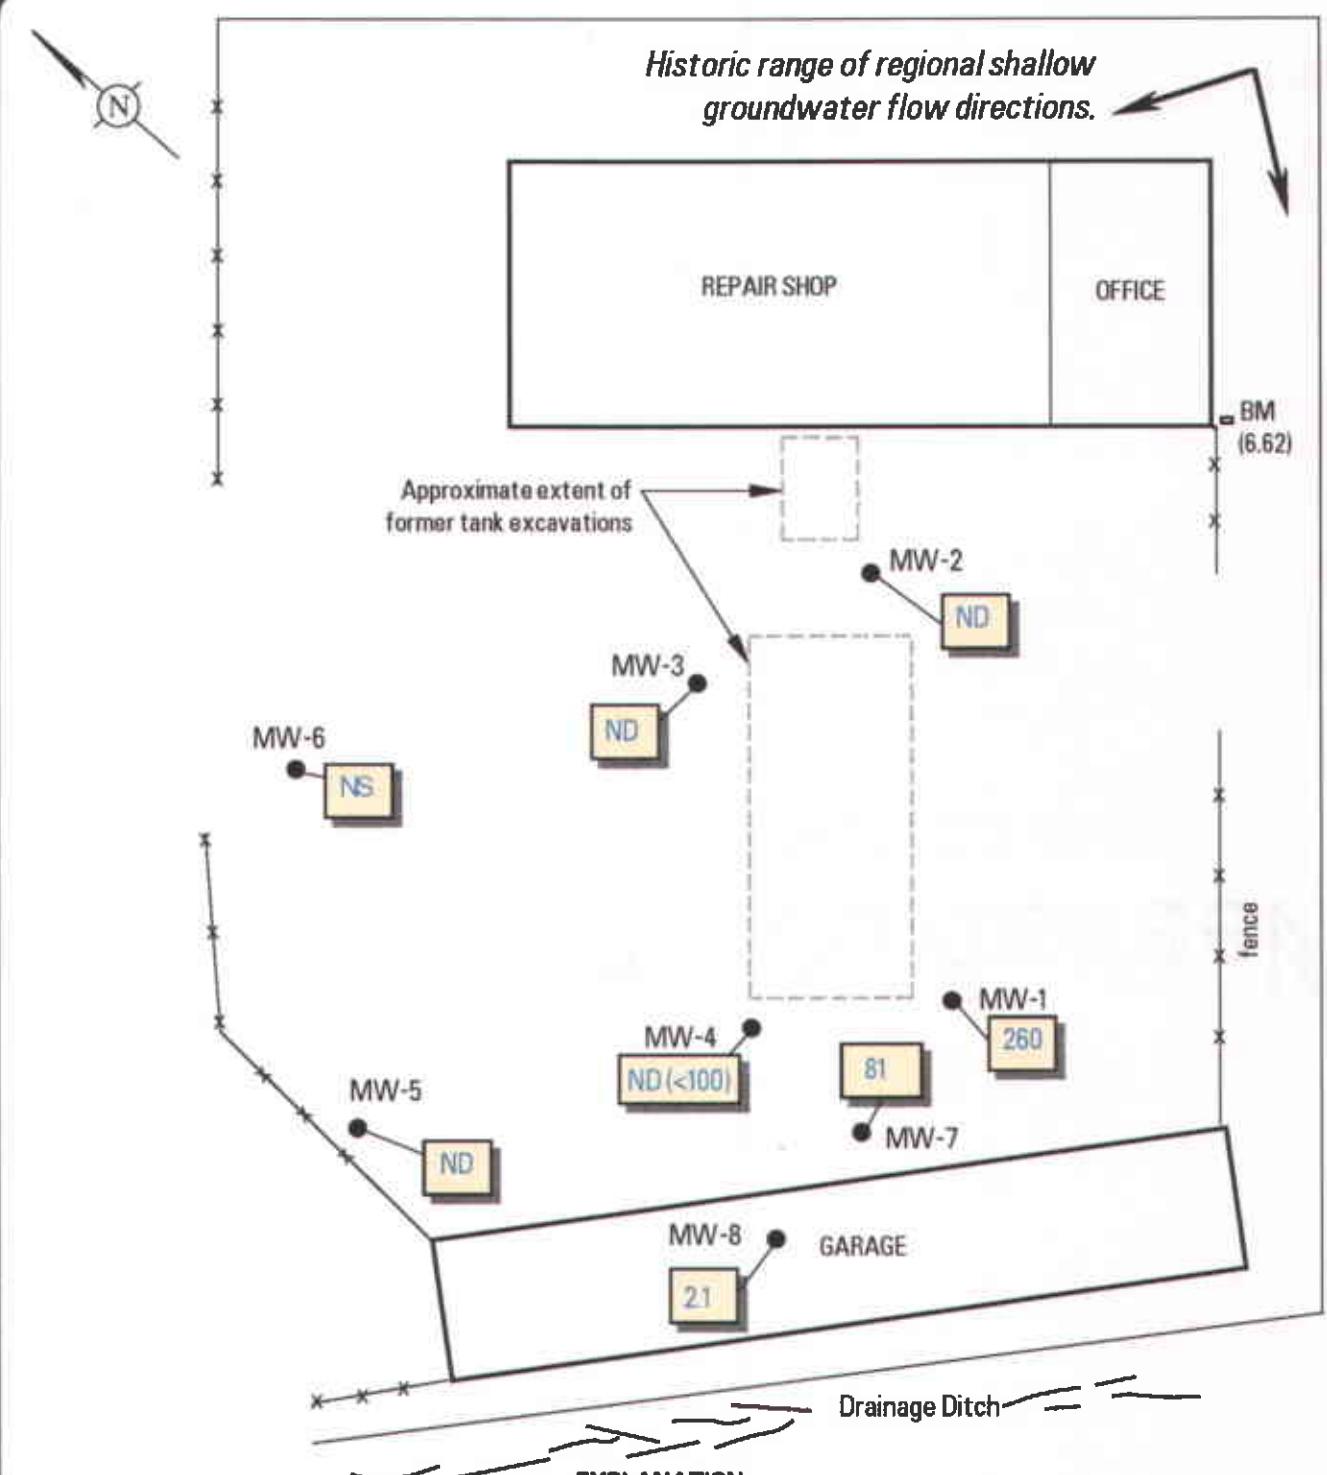

(feet) relative to benchmark,  
measured February 20, 1997.

= BM Survey Bench Mark (based on City of  
Oakland datum which is 3 feet lower  
than Mean Sea Level).

(-0.30)

Groundwater elevation contour (feet);  
dashed where inferred (contour interval  
equals 0.10 feet) queried where unknown.

Richmond, CA 94804  
Attention: Teresa Payne

Client Project ID: RC0019.010  
Sample Descript: Water  
Analysis for: Total Dissolved Solids  
First Sample #: 702-1351

Sampled: Feb 20, 1997  
Received: Feb 21, 1997  
Analyzed: Feb 25, 1997  
Reported: Mar 6, 1997

**LABORATORY ANALYSIS FOR: Total Dissolved Solids**

Sample Number	Sample Description	Detection Limit mg/L	Sample Result mg/L	QC Batch Number	Instrument ID
702-1351	MW-1	1.0	1,400	IN022597160100B	Manual
702-1352	MW-2	1.0	1,400	IN022597160100B	Manual
702-1353	MW-3	1.0	2,900	IN022597160100B	Manual
702-1354	MW-4	1.0	1,500	IN022597160100B	Manual
702-1355	MW-5	1.0	1,300	IN022597160100B	Manual
702-1356	MW-7	1.0	3,300	IN022597160100B	Manual
702-1357	MW-8	1.0	3,800	IN022597160100B	Manual

Alkalies reported as N.D. were not present above the stated limit of detection.

---------------------------------	--------	--------	--------	--------	--------	--------

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

\*\* MS = Matrix Spike, MSD = MS Duplicate, RPD = Relative % Difference
