Subject: Quarterly *Ground Water Monitoring Report, First Quarter 2002*
Former Beacon Station No. 12574
22315 Redwood Road
Castro Valley, California
RDM Project No. 00-12574

Dear Mr. Hiett:

RDM Environmental (RDM) has been authorized by Ultramar Inc. to perform ground water monitoring oversight for the subject site. This report describes ground water monitoring activities conducted during the **First Quarter 2002**.

Work Performed During the First Quarter 2002:

- Doulas Environmental, Inc. conducted quarterly monitoring activities on **February 11, 2002**.

STATUS OF GROUND WATER MONITORING

Cumulative ground water sampling information is tabulated in Table 1. A site topographic map, site map, ground water elevation contour map and a concentration map are shown as Figures 1 through 4, respectively. The site history is included in Enclosure A, the monitoring data sheets are included in Enclosure B, the analytical results are included in Enclosure C and the historical ground water monitoring data is included in Enclosure D.

- Historical ground water flow direction is to the southwest.

CONCLUSIONS/RECOMMENDATIONS

Based on the February 2002 sampling results and historical ground water data, RDM recommends the ground water monitoring events continue on a quarterly basis.

The interpretations contained in this report represent our professional opinions and are based, in part, on information supplied by the client. These opinions are based on currently available information and are

arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

If you have any questions concerning this project, please contact Richard Munsch at (916) 771-7098.

ENCLOSURE A

Site Background Information

Historical Background Information

Former Beacon No. 12574
22315 Redwood Road
Castro Valley, California

Ultramar Inc.

- On May 5, 1987, five underground storage tanks (two gasoline, two diesel and one waste oil) were excavated and removed from the site. Soil samples were collected from beneath the tanks and analyzed for hydrocarbon constituents. It was determined that gasoline and diesel were present in the soil beneath the former fuel tanks. Soil was over-excavated to the depth of groundwater. Most soil samples collected after the over-excavation confirmed removal of impacted soil. A sample collected from the over-excavation northeast of the former tanks contained petroleum hydrocarbons at a concentration of 1989 parts per million. No further excavation was conducted.
- During March 1991, three groundwater monitoring wells were installed on-site. Laboratory analysis of soil samples obtained from monitoring well borings indicated that soil had been impacted in the vicinity of former USTs (these USTs were no longer present when Beacon operated the station) to the depth of groundwater, where it then apparently spread across the site and impacted soil immediately above groundwater.
- In May 1993, five ground water monitoring wells were installed. With the installation of these new wells the extent of impacted groundwater was defined.
- During the first quarter 1994, a soil gas survey/performance test, aquifer pump test, and air sparging was conducted.
- During the fourth quarter 1994, a PAR/RAP was submitted. The consultant concluded that further assessment and remediation were not necessary. It was recommended that groundwater monitoring continue.
- In December 1996, a Risk-Based Corrective Action (RBCA) assessment was prepared and submitted to the County. Correspondence prepared by the County in May 1997, and July 1998, requested further RBCA analyses. A *Supplement to Risk-Based Corrective Action Tier 1 and Tier 2 Analyses* was completed in March 1999.
- In September 1998, monitoring wells MW-7 and MW-8 were abandoned, as required by the Alameda County Department of Public Works.
- In July 1999, the property owner had a geophysical survey completed, which concluded that additional USTs were not present at the site.
- In January 2002, RDM Environmental was contracted by Ultramar Inc. to continue environmental oversight of the site.

NOTES:

1 : Measurement and reference elevation taken from notch/mark on top north side of well casing.

2 : Elevation reference to mean sea level.

Well Depth : Measured from top of casing to bottom of well.

3 : Well abandoned.
