SUBJECT Notification of Scheduled Environmental Activities
Former Exxon Service Station 70235
2225 Telegraph Avenue, Oakland, California

Mr. Truong:

At the request of ExxonMobil Environmental Services (EMES), on behalf of Exxon Mobil Corporation, Cardno ERI is notifying you of upcoming environmental activities at the subject site currently scheduled for June 11 through 14, 2013.

Cardno ERI anticipates installing of four groundwater monitoring wells (MW6Ka, MW6Kb, MW6La, and MW6Lb). The locations of the wells are shown on the attached Proposed Well Locations map.

Field activities will include the following:

- Clearing well locations to a depth of 8 feet bgs to check for subsurface utilities.
- Drilling and sampling four soil borings.
- Installing groundwater monitoring wells in the borings.

Soil and decontamination water generated during field activities will be stored in 55-gallon drums at the site. Drums will be removed from the site pending completion of laboratory analyses of the contents.

Cardno ERI will make every attempt to minimize disruptions to the site; however, because of the small area, an exclusion zone will be established during drilling operations and will block access to a portion of the dispenser islands during drilling activities.

Well development and surveying activities are expected to occur the following week and to take approximately one day.
