Cambria Project No. 207-0523-001

Environmental Health

Alameda County

SEP 28 2006

Dear Mr. Smith:

Cambria Environmental Technology, Inc. (Cambria) prepared this report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) to document the recent underground storage tank (UST) removal activities at the referenced site. Under Livermore-Pleasanton Fire Department (LPFD) direction, Cambria performed soil sampling following the removal of one waste oil UST. Cambria performed the work in accordance with Alameda County Health Care Services Agency (ACHCSA) and San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) guidelines.

SITE DESCRIPTION

The subject site is an active Shell-branded service station located on the southern corner of the First Street and Vineyard Avenue intersection in a mixed commercial and residential area of Pleasanton, California (Figure 1). Prior to the waste oil UST removal, the site layout included a station building, three fuel USTs, one waste oil UST, and two dispenser islands (Figure 2).

SAMPLING ACTIVITIES AND SAMPLE ANALYSES

On July 20, 2006, Wayne Perry, Inc. (Wayne Perry) of Sacramento, California removed one 550-gallon, single-wall, fiberglass waste oil UST. Attachment A presents Cambria's tank removal sampling procedures.

Cambria
Environmental
Technology, Inc.

5900 Hollis Street
Suite A
Emeryville, CA 94608
Tel (510) 420-0700
Fax (510) 420-9170

Personnel Present:

- Paul Smith, Hazardous Materials Inspector, LPFD
- Frank Kramer, Project Manager, Wayne Perry
- Chris Steadman, Construction Foreman, Wayne Perry
- Bill DeBoer, Staff Geologist, Cambria

Sampling Date: July 20, 2006

UST Removal Observations: Cambria observed no cracks, holes, or corrosion in the UST upon removal.

UST Excavation Soil Sampling: Cambria collected one soil sample (WO-2-14) from the bottom of the UST excavation at a depth of 14 feet below grade using an excavator. Figure 2 shows the sampling location. The soil was removed from the excavator bucket and packed into a clean brass sample tube; the tube ends were covered with Teflon® tape and plastic end caps. The soil sample was labeled, placed into a cooler with ice, entered onto a chain-of-custody record, and transported to a California-certified analytical laboratory.

Chemical Analyses: State-certified laboratories Kiff Analytical LLC (Kiff) of Davis, California and Calscience Environmental Laboratories, Inc. (Calscience) of Garden Grove, California analyzed the soil sample for:

- Oil and grease by EPA Method 1664 A Modified;
- Total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015 (Modified);
- Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary-butyl ether (MTBE), ethyl tertiary-butyl ether (ETBE), di-isopropyl ether (DIPE), tertiary-amyl methyl ether (TAME), tertiary-butanol (TBA), 1,2-dichloroethane (1,2-DCA), 1,2-dibromoethane (EDB), and chlorinated hydrocarbons by EPA Method 8260B;
- Cadmium, chromium, lead, nickel, and zinc by EPA Method 6010B;
- Polychlorinated biphenyls (PCBs) by EPA Method 8082; and
- Polynuclear aromatics (PNAs), pentachlorophenol (PCP), and creosote by EPA Method 8270C.

Attachment B includes the laboratory report.

Soil Disposal: Approximately 20 cubic yards of pea gravel were generated during field activities and temporarily stored in the waste oil UST excavation, which was lined with plastic sheeting. The pea gravel was sampled and profiled for disposal. Attachment B includes the laboratory report. On September 11, 2006, Manley and Sons Trucking, Inc. of Sacramento,

California transported the pea gravel to Allied Waste Industries' Forward Landfill in Manteca, California for disposal as non-hazardous waste. Attachment C presents the disposal confirmation.

ANALYTICAL RESULTS

Table 1 summarizes soil analytical results, and Attachment B presents the laboratory analytical reports. A summary of these data is presented below.

Soil sample WO-2-14 contained 26 parts per million (ppm) oil and grease, 5.5 ppm TPHd, 0.021 ppm MTBE, 40.7 ppm chromium, 6.00 ppm lead, 46.9 ppm nickel, and 52.5 ppm zinc.

Based on these concentrations, Shell submitted an Underground Storage Tank Unauthorized Release (Leak)/Site Contamination Report (Unauthorized Release Report) on July 28, 2006. Attachment C presents this report.

CONCLUSIONS

All the detections are below SFBRWQCB environmental screening levels for deep soil (greater than 3 meters below grade) where groundwater is a current or potential drinking water source for residential land use areas. Therefore, based on these results, no further investigation of waste oil constituents is warranted.

Abbreviations and Notes:

O&G = Oil and grease by EPA Method 1664 A (Modified)

TPHd = Total petroleum hydrocarbons as diesel by EPA Method 8015 (Modified)

TPHg = Total petroleum hydrocarbons as gasoline by EPA Method 8260B

BTEX = Benzene, toluene, ethylbenzene, and total xylenes by EPA Method 8260B

Chlorinated hydrocarbons by EPA Method 8260B; see laboratory analytical report for a complete list of specific constituents

MTBE - Methyl tertiary-butyl ether by EPA Method 8260B

OXYs = Di-isopropyl ether, ethyl tertiary-butyl ether, tertiary-amyl methyl ether, and tertiary-butanol by EPA Method 8260B

1,2-DCA = 1,2-Dichloroethane by EPA Method 8260B

EDB = 1,2-Dibromoethane by EPA Method 8260B

Cd = Cadmium by EPA Method 6010B

Cr = Chromium by EPA Method 6010B

Pb = Lead by EPA Method 6010B

Ni = Nickel by EPA Method 6010B

Zn = Zinc by EPA Method 6010B

PNAs = Polynuclear aromatics by EPA Method 8270C; see laboratory analytical report for a complete list of specific constituents

PCP = Pentachlorophenol by EPA Method 8270C

Creosote analyzed by EPA Method 8270C. It is reported as a combination of naphthalene, acenaphthylene, fluorene, phenanthrene, anthracene, fluoranthene, pyrene, 1-methylnaphthalene, and 2-methylnaphthalene.

PCBs = Polychlorinated biphenyls by EPA Method 8082; see laboratory analytical report for a complete list of specific constituents

fbg = Feet below grade

mg/kg = Milligrams per kilogram (parts per million)

<x = Not detected at reporting limit x

ND = Not detected; see laboratory analytical report for constituent-specific reporting limits

-- = No applicable environmental screening level

a = Hydrocarbons reported as TPHd do not exhibit a typical Diesel chromatographic pattern. These hydrocarbons are higher boiling than typical diesel fuel.

Data in **BOLD** equals or exceeds applicable San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) environmental screening level (ESL) value

ATTACHMENT A

Tank Removal Sampling Procedures

TANK REMOVAL SAMPLING PROCEDURES

This document describes Cambria Environmental Technology's standard operating procedures for collecting soil and ground water samples during underground storage tank removal. These procedures ensure that the samples are collected, handled, and documented in compliance with California Administration Code Title 23: Waters; Chapter 3: Water Resources Control Board; Subchapter 16: Underground Storage Tank Regulations (Title 23). Cambria's sampling procedures are based on guidelines contained in the California State Regional Water Quality Control Board Tri-Regional Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites dated August 10, 1990.

Tank Removal Sampling

The objective of sample collection during routine underground storage tank removals is to determine whether hydrocarbons or other stored chemicals have leaked to the subsurface. If no ground water is encountered within the tank excavation, Cambria will sample native soil 1 to 2 ft beneath the removed tank. Additional soil samples may also be collected at locations of obvious spillage to determine maximum concentrations in the surrounding soils. For underground storage tanks with a capacity of less than 1,000 gallons, one soil sample is collected beneath the fill end of the tank. For tanks with a capacity of between 1,000 and 10,000 gallons, one soil sample is collected beneath each end of the tank. For tanks larger than 10,000 gallons, 3 or more soil samples are collected beneath the removed tank. We also collect one soil sample for every 20 ft of product piping.

In cases where ground water is encountered within underground storage tank excavations, Cambria will collect confirmatory soil samples from the excavation sidewalls just above the soil/ground water interface and a representative ground water sample from the excavation. The excavation is typically purged and allowed to recover prior to collecting the water sample. For tanks with capacities of 10,000 gallons or less, one soil sample is collected from the wall at each end of the tank excavation. For tanks with capacities greater than 10,000 gallons, or tank clusters, at least four soil samples are collected from the excavation walls next to the tank ends. Piping samples are collected in native soil 1 to 2 ft beneath the removed piping. One sample is typically collected for every 20 linear ft of piping unless regulatory agencies approve of different sampling requirements.

The soil samples are collected in steam cleaned brass or steel tubes from either a driven split-spoon type sampler or the bucket of a backhoe. When a backhoe is used, approximately three inches of soil are scraped from the surface and the tube is driven into the exposed soil.

Upon removal from the split-spoon sampler or the backhoe, the samples are trimmed flush, capped with Teflon sheets and plastic end caps, labeled, logged and refrigerated for delivery under chain of custody to a State certified analytic laboratory.

The ground water sample is collected using steam cleaned Teflon or PVC bailers, decanted into a volatile organic analysis (VOA) bottle or other appropriate clean sample container, refrigerated and transported under chain of custody to a State certified analytic laboratory.

Dear Ms. Cool,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Joel Kiff".

Case Narrative

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample WO-2-14. These hydrocarbons are higher boiling than typical diesel fuel.

Supplemental Report 1

September 22, 2006

The original report has been revised/corrected.

Joel Kiff
 Kiff Analytical
 2795 2nd Street, Suite 300
 Davis, CA 95616-6593

Subject: **Calscience Work Order No.: 06-07-1115**
Client Reference: 4226 1st Street, Pleasanton

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 7/22/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in black ink that appears to read "Stephen Nowak".

Glossary of Terms and Qualifiers

Work Order Number: 06-07-1115

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Subject: Work Order No. 06-07-1115 (Kiff PO# 51216): Client Sample Number on report and Field Point Name on EDD change request
Importance: High

Good morning!

Our client for Work Order No. 06-07-1115 (Kiff PO# 51216) requested this morning that the Client Sample Number on the report be changed from "WO-1-14" to "WO-2-14"; and that the Field Point Name on the GeoTracker EDD be changed from "WO-1" to "WO-2".

He is in desperate need of this change today; can it be completed by noon? Please let me know!

Also, thank you for sending the reports yesterday in a difficult situation; everything has come through, and it appears our email difficulty has been solved!

Dear Ms. Cool,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".

Case Narrative

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample PG-1. These hydrocarbons are higher boiling than typical diesel fuel.

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 7/25/2006 and analyzed in accordance with the attached chain-of-custody.

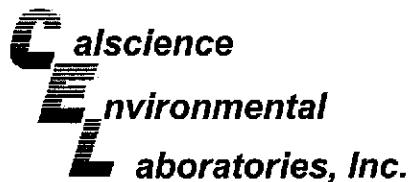

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of any subcontracted analysis is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Glossary of Terms and Qualifiers

Work Order Number: 06-07-1182

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
