# ***Semiannual Monitoring Report***

## ***Fourth Quarter 2010***

*76 Service Station 7376*

*4191 First Street, Pleasanton, CA*

### **1.0 INTRODUCTION**

---

Antea™ Group, formerly Delta Consultants (Delta), is pleased to submit this Semiannual Monitoring Report, Fourth Quarter 2010 for the referenced site in Pleasanton, CA (**Figure 1, Attachment**). Current site facilities consist of a cashier's kiosk, four product dispenser islands and two 12,000-gallon double-wall fiberglass gasoline underground storage tanks (USTs). There are currently 13 active groundwater-monitoring wells at and in the site vicinity (**Figure 2, Attachment**). The site is bounded northwest by a former Southern Pacific Railroad right-of-way currently owned by Alameda County, north and northeast by a commercial building, southeast by First Street, and southwest by Ray Street. There is an underground KinderMorgan petroleum pipeline presently located in the Alameda County property adjacent to the northwest edge of the site. Properties in the immediate site vicinity are used for a mix of residential and commercial purposes. A Shell service station is located east of the site. The site is located at an approximate elevation of 366 feet above mean sea level.

This report summarizes the data obtained from the most recent groundwater monitoring event completed on December 28, 2010. Included in the attached report are groundwater flow contours and trends, contaminant concentration maps and graphs, and historical data tables. This report has received a technical review by Mr. Lee Dooley, California Certified Hydrogeologist 183.

#### **1.1 Work Performed During the Third/Fourth Quarter of 2010**

- Delta submitted a Revised Corrective Action Plan dated September 30, 2010.
- Delta submitted a Remedial Action Plan dated December 20, 2010.
- TRC performed the fourth quarter 2010 monitoring and sampling event and prepared a quarterly monitoring report.
- Antea Group submitted the Semi-annual Groundwater Monitoring Report 2010 – January through June.

#### **1.2 Work Proposed for the First/Second Quarter of 2011**

- Antea Group to submit a revised Remedial Action Plan per request of Alameda County Health Care Services (ACHCS).
- TRC to conduct the second quarter 2011 groundwater monitoring and sampling event and prepare a quarterly monitoring report.
- Antea Group to prepare and submit the Second Quarter 2010 Quarterly Monitoring Report.

## 2.0 CURRENT PROJECT STATUS

Current phase of project:	Semi-annual groundwater monitoring (2Q, 4Q); RAP submitted for review by ACHCSA.
Local Oversight Program (LOP) – Lead agency for cleanup oversight:	ACHCSA (Case #RO366)
Secondary agency(s):	San Francisco Bay RWQCB (Case #01-0109)
Monitoring well gauging schedule:	Semi-annual; MW-1B, MW-2C, MW-3B, MW-4 through MW-12. MW-13 gauged quarterly
Monitoring well sampling schedule:	Semi-annual (2Q, 4Q): MW-1B, MW-2C, MW-3B, MW-4 through MW-12. MW-13 sampled quarterly.
Total number of monitoring/remediation wells:	On-site: 5 – monitoring wells Off-site: 8 – monitoring wells
Range of well depths (total depth below ground surface, bgs):	70 to 82 feet bgs
Wells with historical measurable LNAPL (light non-aqueous phase liquid):	MW-5
Generalized site geology:	Interlayered dipping clay, silt, and sand.
Historic Range in Depth to Water (DTW; feet [ft] below top of casing	43.32 (MW-12, 3/19/07) to 92.28 (MW-4, 12/16/99)
Historical groundwater elevation range (ft):	317.79 (MW-9, 3/25/08) to 273.08 (MW-11, 9/7/02)
Local Water Supply Wells:	Well surveys were performed in 2004 by Toxichem Management Systems, Inc and in 2005 by Delta. The 2004 survey identified 18 wells within a ½-mile radius.
Current remediation technique	No active remediation

## 3.0 GROUNDWATER MONITORING

For this fourth quarter 2010 groundwater monitoring event, a total of thirteen wells were gauged of which 11 were purged, and sampled by subcontractor TRC Solutions. Wells MW-2C and MW-3B were dry. Copies of TRC's field data sheets are included in their attached report. The recent gauging and sampling data are summarized below.

Well gauging and sampling date:	12/28/10
---------------------------------	----------

Wells gauged:	MW-1B, MW-2C, MW-3B, MW-4 through MW-13
Wells sampled:	MW-1B and MW-4 through MW-13 (Wells MW-2C and MW-3B were dry)
Purge method:	3 well casing volumes via electric, submersible pump
Sample collection method:	Disposable bailers
Groundwater parameters measured (Attachment C):	Temperature, pH, Conductivity
Wells with measurable LNAPL:	None
Current depth to water range (ft BTOC):	Min: 64.48 (MW-12) Max: 82.36 (MW-4)
Current groundwater elevation range (ft):	Min: 286.78 (MW-10) Max: 294.49 (MW-8)
Change in groundwater elevation from previous event (average change for all gauged wells):	increase 0.52 feet
Groundwater flow direction and gradient:	Radial outward from MW-5; variable gradient

### 3.1 Groundwater Flow Gradient and Directional Trends

Using the well gauging data from December 28, 2010 and the surveyed well casing elevations, TRC calculated the groundwater table elevation at each monitoring well location. These elevations were used to calculate and plot the groundwater flow direction and gradient across the site. Based on the recent data, groundwater is radially outward from well MW-5 (see **Figure 2** in attachment). The flow gradient is variable across the site area.

### 3.2 Groundwater Quality Data

Groundwater samples collected during the fourth quarter 2010 sampling event were submitted under chain-of-custody protocol to BC Laboratories, Inc. in Bakersfield, California, a state of California Environmental Laboratory Accreditation Program (ELAP) certified laboratory (Certification No. 1186). The complete laboratory analytical report is included in the attached TRC report. Groundwater samples were analyzed for one or more of the following:

- Gasoline Range Organics (GRO) and diesel (DRO) by California Test Method CA-LUFT.
- Benzene, toluene, ethylbenzene, xylenes (collectively BTEX), and methyl tertiary butyl ether (MTBE) by Environmental Protection Agency (EPA) Test Method 8260B.
- 1,2-dibromoethane (EDB), and 1,2-dichloroethane (1,2-DCA) by EPA Test Method 8260B.

Laboratory analytical data from the fourth quarter 2010 sampling event are summarized in the table below.

Constituents	Number of Reported Concentrations Above LRL of Total Samples Collected	Minimum Reported Concentration, in µg/L (Sample ID)	Maximum Reported Concentration, in µg/L (Sample ID)
GRO	5 of 11	63 (MW-1B)	8,400 (MW-5)
Benzene	2 of 11	41 (MW-7)	1,600 (MW-5)
Toluene	3 of 11	0.71 (MW-10)	37 (MW-5)
Ethylbenzene	2 of 11	3.4 (MW-7)	430 (MW-5)
Total Xylenes	3 of 11	1.3 (MW-4)	88 (MW-5)
MTBE	9 of 10	1.5 (MW-13)	2,500 (MW-5)
DRO	0 of 9	<50	<50
EDB	0 of 11	<25 (MW-5)	<25 (MW-5)
1,2-DCA	1 of 11	<25 (MW-5)	3.1 (MW-6)

**Legend:**

µg/L = Micrograms per liter LRL = Laboratory reporting limit GRO = Gasoline Range Organics

### 3.3 Groundwater Contaminant Trends

The TPH-G and MTBE plumes remain centered near MW-5, spreading out to the southwest and northeast. TPH-G, benzene, and MTBE distributions in groundwater are shown on **Figures 3, 4, and 5**, respectively, of the attached TRC report. TPH-G and benzene concentrations decreased in well MW-5 from 17,000 µg/L and 2,300 µg/L in the third quarter to current values of 8,400 µg/L and 1,600 µg/L, respectively. MTBE declined in downgradient well MW-13, from 68 µg/L in the second quarter to 1.5 µg/L currently.

### 4.0 RECENT CORRESPONDENCE

Letter from ACHCSA dated August 4, 2010 providing technical comments regarding the Corrective Action Plan submitted on July 7, 2010 and requesting submittal of a revised Corrective Action Plan.

Letter from ACHCSA dated October 19, 2010 providing technical comments regarding the revised Corrective Action Plan and a request for a Remedial Action Plan.

Email dated January 4, 2011, granting a extension for submittal of this report from January 18,2011 to January 31, 2011.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

The fourth quarter 2010 analytical data indicates that the observed petroleum hydrocarbon concentrations beneath the site decreased or remained stable. Delta recommends continued semiannual groundwater monitoring.

## 6.0 REMARKS

The recommendations contained in this report represent Antea USA, Inc.'s professional opinions based upon the currently available information and are arrived at in accordance with currently accepted professional standards. This report is based upon a specific scope of work requested by the client. The contract between Antea USA, Inc. and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea USA, Inc.'s client and anyone else specifically identified in writing by Antea USA, Inc. as a user of this report. Antea USA, Inc. will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea USA, Inc. makes no express or implied warranty as to the contents of this report.

# TABLES

## TABLE KEY

### STANDARD ABBREVIATIONS

--	=	not analyzed, measured, or collected
LPH	=	liquid-phase hydrocarbons
µg/l	=	micrograms per liter (approx. equivalent to parts per billion, ppb)
mg/l	=	milligrams per liter (approx. equivalent to parts per million, ppm)
ND<	=	not detected at or above laboratory detection limit
TOC	=	top of casing (surveyed reference elevation)
D	=	duplicate
P	=	no-purge sample

### ANALYTES

DIPE	=	di-isopropyl ether
ETBE	=	ethyl tertiary butyl ether
MTBE	=	methyl tertiary butyl ether
PCB	=	polychlorinated biphenyls
PCE	=	tetrachloroethene
TBA	=	tertiary butyl alcohol
TCA	=	trichloroethane
TCE	=	trichloroethene
TPH-G	=	total petroleum hydrocarbons with gasoline distinction
TPH-G (GC/MS)	=	total petroleum hydrocarbons with gasoline distinction utilizing EPA Method 8260B
TPH-D	=	total petroleum hydrocarbons with diesel distinction
TRPH	=	total recoverable petroleum hydrocarbons
TAME	=	tertiary amyl methyl ether
1,2-DCA	=	1,2-dichloroethane (same as EDC, ethylene dichloride)

### NOTES

1. Elevations are in feet above mean sea level. Depths are in feet below surveyed top-of-casing.
2. Groundwater elevations for wells with LPH are calculated as: Surface Elevation – Measured Depth to Water + (Dp x LPH Thickness), where Dp is the density of the LPH, if known. A value of 0.75 is used for gasoline and when the density is not known. A value of 0.83 is used for diesel.
3. Wells with LPH are generally not sampled for laboratory analysis (see General Field Procedures).
4. Comments shown on tables are general. Additional explanations may be included in field notes and laboratory reports, both of which are included as part of this report.
5. A “J” flag indicates that a reported analytical result is an estimated concentration value between the method detection limit (MDL) and the practical quantification limit (PQL) specified by the laboratory.
6. Other laboratory flags (qualifiers) may have been reported. See the official laboratory report (attached) for a complete list of laboratory flags.
7. Concentration graphs based on tables (presented following Figures) show non-detect results prior to the Second Quarter 2000 plotted at fixed values for graphical display. Non-detect results reported since that time are plotted at reporting limits stated in the official laboratory report.
8. Prior to the 1st quarter 2010, the word “monitor” was used in table comments interchangeably with the word “gauge”. Starting in the 1<sup>st</sup> quarter 2010, the word “monitor” is used to include both “gauge” and “sample”.

### REFERENCE

TRC began groundwater monitoring and sampling for 76 Station 7376 in October 2003. Historical data compiled prior to that time were provided by Gettler-Ryan Inc.

# GENERAL FIELD PROCEDURES

## **Groundwater Monitoring and Sampling Assignments**

For each site, TRC technicians are provided with a Technical Service Request (TSR) that specifies activities required to complete the groundwater monitoring and sampling assignment for the site. TSRs are based on client directives, instructions from the primary environmental consultant for the site, regulatory requirements, and TRC's previous experience with the site.

## **Fluid Level Measurements**

Initial site activities include determination of well locations based on a site map provided with the TSR. Well boxes are opened and caps are removed. Indications of well or well box damage or of pressure buildup in the well are noted.

Fluid levels in each well are measured using a coated cloth tape equipped with an electronic interface probe, which distinguishes between liquid phase hydrocarbon (LPH) and water. The depth to LPH (if it is present), to water, and to the bottom of the well are measured from the top of the well casing (surveyors mark or notch if present) to the nearest 0.01 foot. Unless otherwise instructed, a well with less than 0.67 foot between the measured top of water and the measured bottom of the well casing is considered dry, and is not sampled. If the well contains 0.67 foot or more of water, an attempt is made to bail and/or sample as specified on the TSR.

Wells that are found to contain LPH are not purged or sampled. Instead, one casing volume of fluid is bailed from the well and the well is re-sealed. Bailed fluids are placed in a container separate from normal purge water, and properly disposed.

## **Purging and Groundwater Parameter Measurement**

TSR instructions may specify that a well not be purged (no-purge sampling), be purged using low-flow methods, or be purged using conventional pump and/or bail methods. Conventional purging generally consists of pumping or bailing until a minimum of three casing volumes of water have been removed or until the well has been pumped dry. Pumping is generally accomplished using submersible electric or pneumatic diaphragm pumps.

During conventional purging, three groundwater parameters (temperature, pH, and conductivity) are measured after removal of each casing volume. Stabilization of these parameters, to within 10 percent, confirm that sufficient purging has been completed. In some cases, the TSR indicates that other parameters are also to be measured during purging. TRC commonly measures dissolved oxygen (DO), oxidation-reduction potential (ORP), and/or turbidity. Instruments used for groundwater parameter measurements are calibrated daily according to manufacturer's instructions.

Low-flow purging utilizes a bladder or peristaltic pump to remove water from the well at a low rate. Groundwater parameters specified by the TSR are measured continuously until they become stable in general accordance with EPA guidelines.

Purge water is generally collected in labeled drums for disposal. Drums may be left on site for disposal by others, or transported to a collection location for eventual transfer to a licensed treatment or recycling facility. In some cases, purge water may be collected directly from the site by a licensed vacuum truck company, or may be treated on site by an active remediation system, if so directed.

## **Groundwater Sample Collection**

After wells are purged, or not purged, according to TSR instructions, samples are collected for laboratory analysis. For wells that have been purged using conventional pump or bail methods, sampling is conducted after the well has recovered to 80 percent of its original volume or after two hours if the well does not recover to at least 80 percent. If there is insufficient recharge of water in the well after two hours, the well is not sampled.

Samples are collected by lowering a new, disposable, ½-inch to 4-inch polyethylene bottom-fill bailer to just below the water level in the well. The bailer is retrieved and the water sample is carefully transferred to containers specified for the laboratory analytical methods indicated by the TSR. Particular care is given to containers for volatile organic analysis (VOAs) which require filling to zero headspace and fitting with Teflon-sealed caps.

After filling, all containers are labeled with project number (or site number), well designation, sample date, sample time, and the sampler's initials, and placed in an insulated chest with ice. Samples remain chilled prior to and during transport to a state-certified laboratory for analysis. Sample container descriptions and requested analyses are entered onto a chain-of-custody form in order to provide instructions to the laboratory. The chain-of-custody form accompanies the samples during transportation to provide a continuous record of possession from the field to the laboratory. If a freight or overnight carrier transports the samples, the carrier is noted on the form.

For wells that have been purged using low-flow methods, sample containers are filled from the effluent stream of the bladder or peristaltic pump. In some cases, if so specified by the TSR, samples are taken from the sample ports of actively pumping remediation wells.

## **Sequence of Gauging, Purging and Sampling**

The sequence in which monitoring activities are conducted is specified on the TSR. In general, wells are gauged beginning with the least affected well and ending with the well that has the highest concentration based on previous analytic results. After all gauging for the site is completed, wells are purged and/or sampled from the least-affected to the most-affected well.

## **Decontamination**

In order to reduce the possibility of cross contamination between wells, strict isolation and decontamination procedures are observed. Portable pumps are not used in wells with LPH. Technicians wear nitrile gloves during all gauging, purging, and sampling activities. Gloves are changed between wells and more often if warranted. Any equipment that could come in contact with fluids are either dedicated a particular well, decontaminated prior to each use, or discarded after a single use. Decontamination consists of washing in a solution of Liqui-nox and water and rinsing twice. The final rinse is in deionized water.

## **Exceptions**

Additional tasks or non-standard procedures, if any, that may be requested or required for a particular site, and noted on the site TSR, are documented in field notes on the following pages.

BC LABORATORIES INC. SAMPLE RECEIPT FORM Rev. No. 12 06/24/08 Page 2 of 2

Submission #: 1018177

SHIPPING INFORMATION: Federal Express  UPS  Hand Delivery  BC Lab Field Service  Other  (Specify) \_\_\_\_\_

SHIPPING CONTAINER: Ice Chest  Box  None  Other  (Specify) \_\_\_\_\_

Refrigerant: Ice  Blue Ice  None  Other  Comments: \_\_\_\_\_

Custody Seals: Ice Chest  Containers  None  Intact? Yes  No  Intact? Yes  No  Comments: \_\_\_\_\_

All samples received? Yes  No  All samples containers intact? Yes  No  Description(s) match COC? Yes  No

COC Received: YES  NO

Emissivity: 0.95 Container: OJA Thermometer ID: H63 Date/Time: 12/28/2000 Analyst Init: S

Temperature: A 0.6 °C / C 0.6 °C

**Notes And Definitions**

- MDL Method Detection Limit
- ND Analyte Not Detected at or above the reporting limit
- PQL Practical Quantitation Limit
- RPD Relative Percent Difference
- A01 PQL's and MDL's are raised due to sample dilution.
- A90 TPPH does not exhibit a "gasoline" pattern. TPPH is entirely due to MTBE.

## **STATEMENTS**

### **Purge Water Disposal**

Non-hazardous groundwater produced during purging and sampling of monitoring wells is accumulated at TRC's groundwater monitoring field office at Concord, California, for transportation by a licensed carrier to an authorized disposal facility. Currently, non-hazardous purge water is transported under a bulk non-hazardous waste manifest to Crosby and Overton, Inc. in Long Beach, California.

### **Limitations**

The fluid level monitoring and groundwater sampling activities summarized in this report have been performed under the responsible charge of a California Registered Geologist or Registered Civil Engineer and have been conducted in accordance with current practice and the standard of care exercised by geologists and engineers performing similar tasks in this area. No warranty, express or implied, is made regarding the conclusions and professional opinions presented in this report. The conclusions are based solely upon an analysis of the observed conditions. If actual conditions differ from those described in this report, our office should be notified.
