Dear Mr. Seery:

Attached for your review and comment is a copy of the *Report of Groundwater Monitoring, First Quarter 2000* for the above-referenced site. The report was prepared by ETIC Engineering, Inc. of Walnut Creek, California, and summarizes the results of the April 2000 sampling event. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached report is true and correct.

If you have any questions or comments, please contact me at (925) 246-8768.

Sincerely,

Darin L. Rouse

1. INTRODUCTION

Exxon RS 7-3399 is an active retail service station located at 2991 Hopyard Road, on the southeast corner of the intersection with Valley Avenue in Pleasanton, California. The site has six pump islands and two 10,000 gallon and one 12,000-gallon double-walled fiberglass underground storage tanks (USTs) for dispensing three grades of gasoline. Auto repair is conducted in the onsite station building.

On 4 April 2000, groundwater was monitored in wells PMW2-PMW6, MW1, MW5S, MW5D, MW7-MW11, OW1, OW2, VR1, and VR2 for liquid-phase hydrocarbons (LPH) with an optical interface probe. Groundwater samples were collected from wells PMW2-PMW5, MW1, MW5S, MW5D, MW7-MW11, OW1, VR1, and VR2, and the samples were analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g), for benzene, toluene, ethylbenzene, and total xylenes (BTEX), and for methyl t-butyl ether (MTBE). MW4 was inaccessible and insufficient water was measured for sample collection in PMW6 and OW2 on 4 April 2000.

2. SUMMARY OF RESULTS

The current groundwater monitoring data are presented in boldface type in Table 1, along with previous data, and current groundwater elevations are shown in Figure 1. ~~The groundwater flow direction on 4 April 2000 was to the southeast in the perched zone, with a gradient of approximately 0.018 using wells PMW2-PMW5. The groundwater flow direction on 4 April 2000 was to the northwest at the water table (Zone 1), with a gradient of approximately 0.005 using wells MW5S, MW7, and MW10. Wells MW5D and MW8 are screened in deeper zones for which a groundwater gradient could not be calculated.~~

After the depths to water were measured, the wells were purged. Field parameters of pH, temperature, and electrical conductance of the purged water were measured for approximately every well casing volume during purging. When the field parameters were stable (less than a 10 percent change from the previous reading for temperature and electrical conductance and not more than 0.1 pH units) and approximately 3 casing volumes were removed from each well, samples were collected in 40-ml glass VOA vials and placed in an ice-filled cooler. A laboratory-prepared trip blank was stored and transported in the cooler with the samples. All samples were handled and transported under chain of custody.

The samples were submitted to SPL, Inc. in Houston, Texas, and analyzed for TPH-g by Cal EPA-modified EPA Method 8015 and for BTEX and MTBE by EPA Method 8021B. Samples in which MTBE was detected by EPA Method 8021B were also analyzed by EPA Method 8260B for confirmation. The results for these analyses are presented in boldface type, along with previous analytical data, in Table 1, and are shown in Figure 1.

Copies of the field documents are included as Appendix A. The laboratory analytical report and chain-of-custody documentation are included in Appendix B.

3. REMEDIATION SYSTEM

The vapor extraction and air systems in place at the site are currently not being operated. Remedial alternatives which more aggressively address source concentrations of hydrocarbons and MTBE are

being evaluated.

4. WORK PROPOSED FOR NEXT QUARTER

Three groundwater monitoring wells will be installed between the site and two water supply wells. A work plan for the well installation was submitted in May.

Groundwater in monitoring wells will be gauged and sampled in June 2000. Groundwater samples will be analyzed for TPH-g, BTEX, and MTBE.

a = Water level recorded during pumping of MW7.

b = Anomalous water level possibly due to recharge from a perched water zone.

c = Casing head cut to lower elevation.

d = Casing head damaged by construction.

e = Results obtained past the technical holding time.

f = Methyl tertiary butyl ether by EPA Method 8260.

g = Unidentified Hydrocarbon C6-C12.

h = Analysis performed outside of EPA recommended hold time.

Depth to groundwater = Measured from notch/mark on north edge of well casing.

µg/L = Micrograms per liter.

TPH = Total petroleum hydrocarbons.

Your sample ID "OW-1" (SPL ID: 00040126-01) was randomly selected for the use in SPL's quality control program for the Purgeable Aromatics analysis by SW846 method 8021B. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Methyl tert-butyl ether (Batch ID: R12017), due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

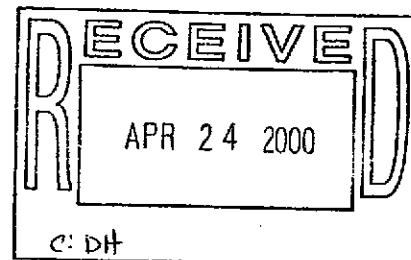

Your sample ID "OW-1" (SPL ID: 00040126-01) was randomly selected for the use in SPL's quality control program for the Volatile Organics analysis by SW846 method 8260B. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for Benzene (Batch ID: R12427), due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

Any data flags or quality control exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.
