INTRODUCTION

At the request of ExxonMobil Oil Corporation, ETIC Engineering, Inc. has prepared this quarterly groundwater monitoring report for former Exxon Retail Site 7-3399. This report presents the results for the most recent groundwater monitoring conducted at the site and summarizes recent site activities. This report covers site activities from 21 and 22 June 2004, the date of the last monitoring event, until 20 and 21 September 2004, the dates of the recent monitoring event. The report also presents results for remediation system monitoring. Groundwater monitoring results, well construction details, a groundwater monitoring plan, and system monitoring results are summarized in the attached figures and tables. Groundwater monitoring protocols, field data, and analytical results are provided in the attached appendixes.

Wells OW1, OW2, PMW1-PMW6, and VR1 are considered to be screened in a perched groundwater zone.

Grab groundwater samples were collected from wells MW5S and PMWS.

Well MW8 was inaccessible on 20 September 2004.

REMEDIATION SYSTEM SUMMARY

Groundwater Extraction System

System description:

The groundwater extraction system (GES) is capable of extracting groundwater from 4 wells: MW9A, OW1, OW2, and VR1. Groundwater is pumped, using electric submersible pumps for wells MW9A and VR1, and using pneumatic pumps for wells OW1 and OW2, through particulate filters, and through two 1,000-pound activated carbon vessels in series. The treated water is discharged to the sanitary sewer under a discharge permit issued by the Dublin San Ramon Services District.

System startup date: 12 March 2001
Active extraction wells: OW2, VR1
Inactive extraction wells/reason: MW9A, OW1 - not operating due to low water levels in MW9A and OW1

Modifications made during reporting period/reasons for modifications:

No modifications were made during the reporting period.

Status of system operation during reporting period/reasons for downtime:

The GES was operated intermittently during the reporting period. The system was down on arrival on 30 August 2004 due to power failure.

System performance data totals (totals since system startup, as of 23 September 2004):

Groundwater extracted: 1,239,380 gallons
Pounds of TPH removed: 1.398 (calculated as the sum of TPH-g and TPH-d)
Pounds of benzene removed: 0.008
Pounds of MTBE removed: 0.782

GES proposed work:

A justification and plan for shutdown of the GES was submitted on 15 March 2004. The GES will continue to operate until the justification and plan for shutdown of GES is approved.

ADDITIONAL ACTIVITIES PERFORMED AT SITE

No additional activities were performed on site.

WORK PROPOSED FOR NEXT QUARTER

Groundwater will be monitored in accordance with the attached groundwater monitoring plan.

A shutdown of the GES is requested based on the justification and plan for the shutdown of the system which was submitted on 15 March 2004. As soon as the approval for the shutdown of the GES is received, the system will be shut down to monitor the site under non-pumping conditions.

PROTOCOLS FOR QUARTERLY GROUNDWATER MONITORING

GROUNDWATER GAUGING

Wells are opened prior to gauging to allow the groundwater level in the wells to equilibrate with atmospheric pressure. The depth to groundwater and depth to liquid-phase hydrocarbons, if present, are then measured to the nearest 0.01 feet using an electronic water level meter or optical interface probe. The measurements are made from a permanent reference point at the top of the well casing. If less than 1 foot of water is measured in a well, the water is bailed from the well and, if the well does not recover, the well is considered "functionally dry." Wells with a sheen or measurable liquid-phase hydrocarbons are generally not purged or sampled.

WELL PURGING

After the wells are gauged, each well is purged of approximately 3 well casing volumes of water to provide representative groundwater samples for analysis. Field parameters of pH, temperature, and electrical conductance are measured during purging to ensure that these parameters have stabilized before groundwater in a well is sampled. Groundwater in each well is purged using an inertial pump (WaTerra), an electric submersible pump, or a bailer. After the well is purged, the water level is checked to ensure that the well has recharged to at least 80 percent of its original water level.

GROUNDWATER SAMPLING

After purging, groundwater in each well is sampled using dedicated tubing and an inertial pump (WaTerra) or a factory-cleaned disposable bailer. Samples from extraction wells are typically collected from sample ports associated with the groundwater remediation system. Samples collected for volatile organic analysis are placed in Teflon septum-sealed 40-milliliter glass vials. Samples collected for diesel analysis are placed in 1-liter amber glass bottles. Each sample bottle is labeled with the site name, well number, date, sampler's initials, and preservative. The samples are placed in a cooler with ice for delivery to a state-certified laboratory. The information for each sample is entered on a chain-of-custody form prior to transport to the laboratory.

Leah,
We want MTBE run by 8021B and confirmed by 8260B for all samples.
Sorry about the confusion. Thanks!

Hi Bryan,
The lab received the samples for the above site that were collected on
the 20th and 21st. Do you want MTBE run by 8021B and confirmed by
8260B
or do you just want it run by 8260B? The COC is a little unclear.

Please verify whether MTBE 8021 or MTBE 8260 are needed at this time.
