Phone call with Rebekah Westrup of Cardno ERI. Water levels have dropped in the on-site monitoring wells. No longer able to pump from VR-2; still pumping MW-9A but water levels are down. Rebekah has spoken to Zone 7 and they are pumping the Hopyard well at 5 million gallons per day. They would like to use the lower water levels to implement soil vapor extraction. Would like expedited turnaround on a Work Plan to act while water levels are down.
