Dear Mr. Seery:

Attached for your review and comment is a copy of the *Second Quarter 2004 Groundwater Monitoring Report* for the above referenced site. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached document is true and correct.

As always, please feel free to contact me directly at (559) 645-9306 with any questions or concerns.

Sincerely,

Re: **Groundwater Monitoring Report – Second Quarter 2004**
Shell-branded Service Station
3790 Hopyard Road
Pleasanton, California
SAP Code 135784
Incident #98995842

Dear Mr. Seery:

Cambria Environmental Technology, Inc. prepared this report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell). This report was prepared in accordance with the quarterly reporting requirements of 23 CCR 2652d.

SECOND QUARTER 2004 ACTIVITIES

Groundwater Monitoring: Blaine Tech Services, Inc. (Blaine) of San Jose, California gauged and sampled the site wells and prepared a summary table of field gauging and laboratory analytical data. Cambria prepared a site vicinity map (Figure 1), a groundwater contour map (Figure 2), and isoconcentration contour maps for total petroleum hydrocarbon as gasoline (TPHg) (Figure 3), benzene (Figure 4), methyl tert butyl ether (MTBE) (Figure 5), and tertiary butyl alcohol (TBA) (Figure 6). Blaine's report, presenting the laboratory report, is included as Appendix A. Also, the historical groundwater monitoring data table in Appendix A has been revised to include data from sample events prior to March 1991.

Groundwater Remediation: The groundwater extraction (GWE) system has been operating fairly continuously since July 1, 2003. The significant drawdown and radius of influence typically maintained at the site is depicted in Figure 2. GWE system influent concentrations have decreased by an order of magnitude since the system began discharging in July 2003. The influent MTBE concentration on June 4, 2004 was below the detection limit of 100 parts per billion. Based on these reduced concentrations, Cambria shut off the pump in extraction well SR-3 at the end of February, and continues to extract water from well SR-1 to capture TPHg and benzene and from SR-2 to capture TBA.

Discharge limitations were not exceeded during the reporting period. Analytical results for the influent, midfluent 1, midfluent 2 and effluent streams are summarized in Table 1 and laboratory reports for GWE system samples are included in Appendix B. System flow data and constituent mass removal calculations are presented in Table 2.

Other Site Activities: In our first quarter 2004 monitoring report, Cambria notified the Alameda County Health Care Services Agency (ACHCSA) that we were proceeding with implementation of a portion of the scope of work proposed in Cambria's April 30, 2003 *Subsurface Investigation Work Plan*. In response, Cambria received a copy of correspondence from the ACHCSA to Shell dated May 5, 2004 requesting additional activities. Thus, proposed vertical assessment activities scheduled for the first week of June were cancelled, pending submittal of a response to the ACHCSA correspondence.

ANTICIPATED THIRD QUARTER 2004 ACTIVITIES

Groundwater Monitoring: Blaine will gauge and sample the site wells and tabulate the data. Cambria will prepare a monitoring report. As requested in the ACHCSA letter dated May 5, 2004, the sample event will include analysis of the five fuel oxygenates and ethanol. Isoconcentration contour maps will be prepared for TPHg, benzene and all detected fuel oxygenates, as requested.

Groundwater Remediation: Cambria will continue to operate the GWE system. Additionally, to reduce the residual mass of MTBE outside of the GWE system capture zone, periodic GWE using a vacuum truck at wells S-7 and S-9 will be scheduled and the results reported in the third quarter monitoring report.

Other Site Activities: Under separate cover, Cambria will submit a response letter, revised site conceptual model, and modified work plan for site investigation activities, in response to the ACHCSA letter dated May 5, 2004.

HISTORICAL REMEDIATION SUMMARY

Mobile Groundwater Extraction: Beginning the week of May 14, 2001, Advanced Cleanup Technologies Inc. of Benicia, California conducted three weekly 8-hour mobile GWE events using wells S-2, S-4 and T-2. Three additional GWE events were performed in August 2001. At Shell's direction, Onyx Industrial Services initiated twice-monthly events extracting from tank backfill well T-2 beginning in April 2002. Groundwater was also extracted from well S-4

C A M B R I A

between June 2002 and September 2002. Extraction from well S-4 was discontinued due to low extraction volumes. Tank backfill well T-4 was added to the twice-monthly extraction events in October 2002.

Mobile GWE was discontinued in March 2003 pending fixed GWE system installation and start-up. Approximately 9.32 pounds of methyl tertiary butyl ether (MTBE) were removed by mobile GWE at the site. Continuous operation of the GWE system began on July 1, 2003.

$\mu\text{g/L}$ = Micrograms per liter

L = Liter

gal = Gallon

g = Gram

NS = Not Sampled

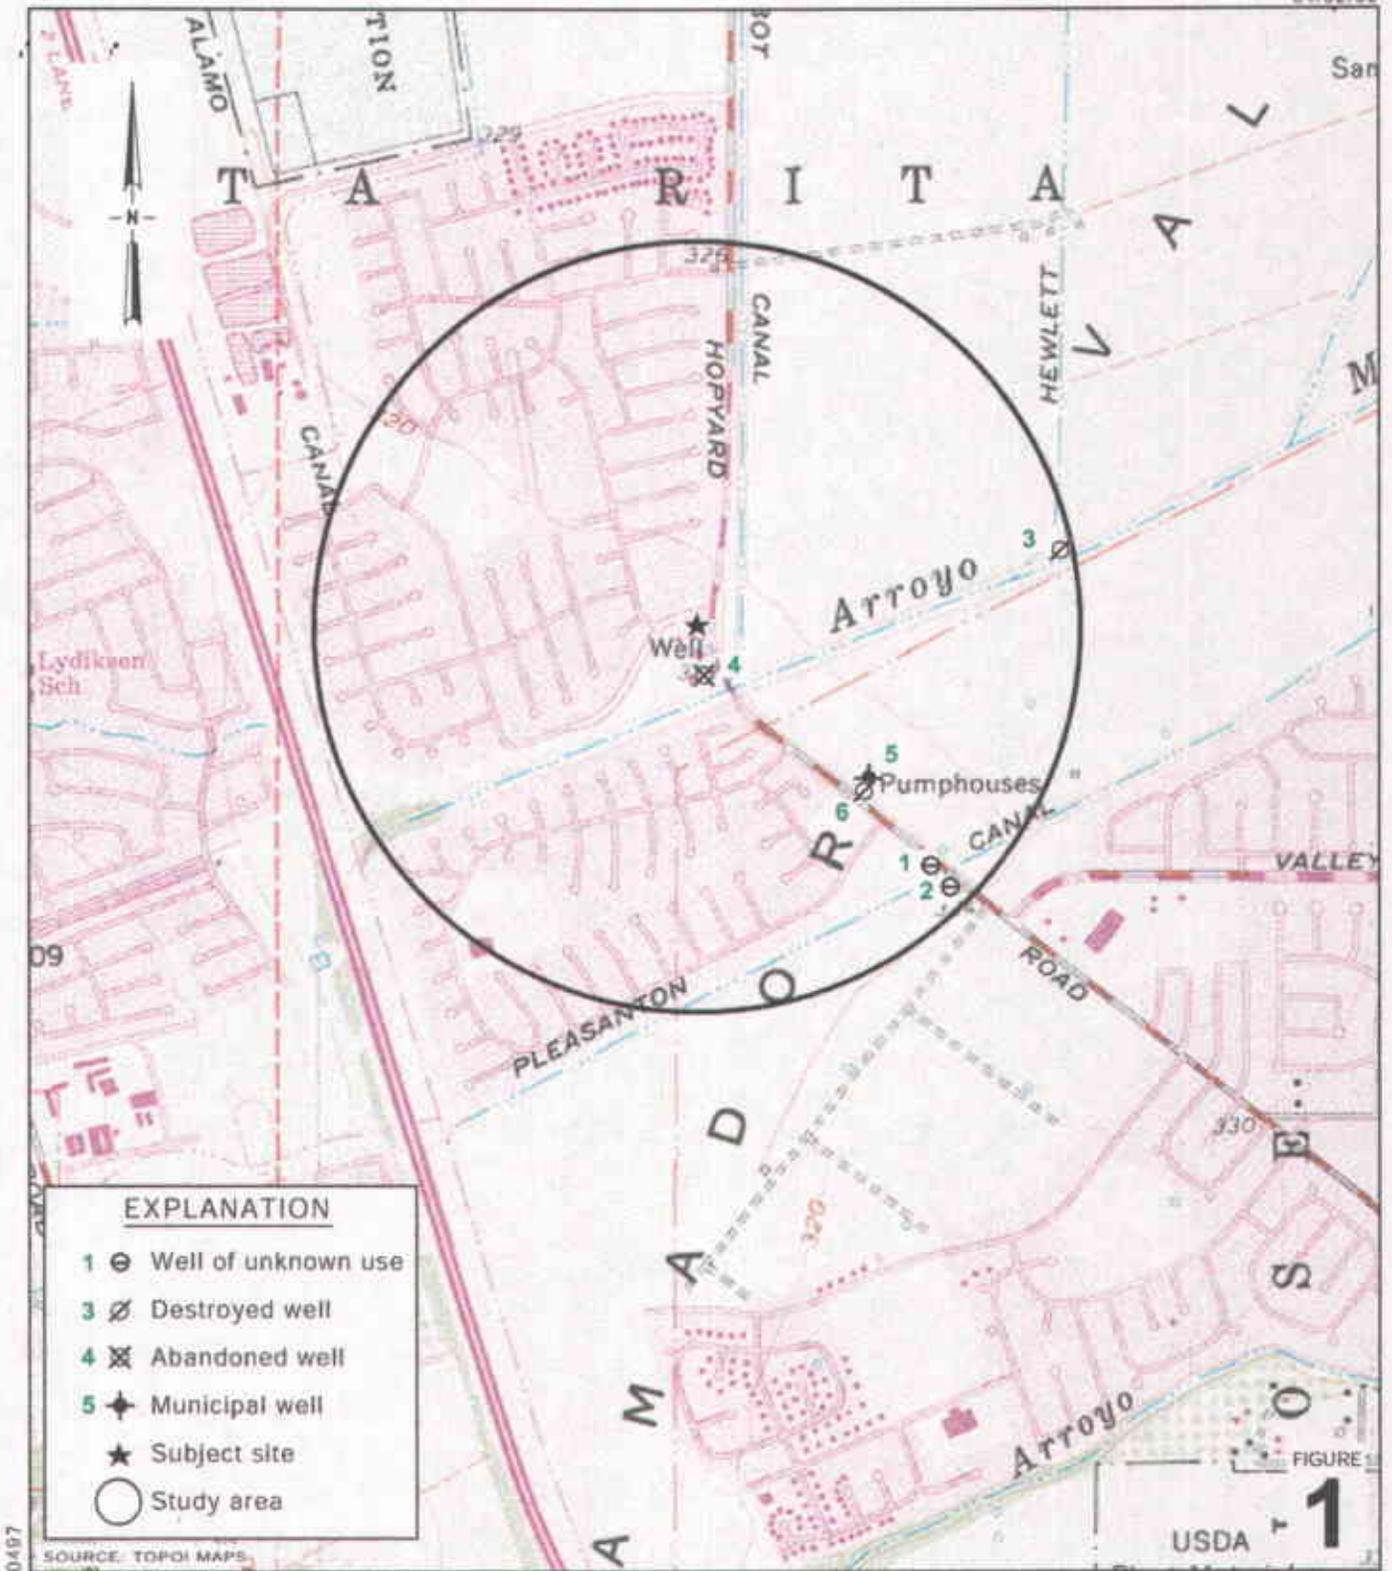

TPHg, benzene and MTBE analyzed by EPA Method 8260

Mass removed based on the formula: volume extracted (gal) x Concentration ($\mu\text{g/L}$) x ($\text{g}/10^6\mu\text{g}$) x (pound/453.6g) x (3.785 L/gal)

When constituents are not detected, the concentration is assumed to be equal to half the detection limit in subsequent calculations.

Volume removal data based on the formula: mass (pounds) x (density)⁻¹ (cc/g) x 453.6 (g/pound) x (L/1000 cc) * (gal/3.785 L)

Density inputs: TPHg = 0.73 g/cc, benzene = 0.88 g/cc, MTBE = 0.74 g/cc

Groundwater Monitoring Report 040407-AC-1

This report covers the routine monitoring of groundwater wells at this Shell-branded facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Martinez Refining Company.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight-hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. Our activities at this site consisted of objective data and sample collection only. No interpretation of analytical results, defining of hydrological conditions or formulation of recommendations was performed.

Please call if you have any questions.

Yours truly,

Legend and Notes

Analysis Flag

o

Reporting limits were raised due to high level of analyte present in the sample.

Result Flag

g

Hydrocarbon reported in the gasoline range does not match our gasoline standard.

rpd

Analyte RPD was out of QC limits due to sample heterogeneity.
