RE: Matheson Oakland, 2500 Poplar St., Oakland (LOP Case # 1306)

This fax is in response to our phone conversation on March 4, 1998. I may have given you the wrong information about the soil pile from the tank excavation. Gary informed me that the soil from the tank excavation was not spread on-site. Instead, it was mixed in with a building demolition stockpile. Figure 4 illustrates the stockpile and demolished building. The tank excavation/building demolition stockpile was sampled on October 3, 1997. The results of the soil sampling are shown in Table 3 (Continued). The TPH-oil results are likely due to ground up asphalt from the building demolition. I was not aware of this sampling event until yesterday. If you require the lab sheets from the sampling event, please contact me at the above phone number.

Thank you, Reneé
