GROUNDWATER GRADIENT

Ms. Chu,

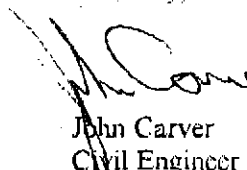

On October 7, 1999, Golden Gate Tank Removal (GGTR) carried out the first complete monitoring event of the three groundwater monitoring wells at the site. The event monitored MW1 which has been in place for about 18 months and the two recently installed groundwater monitoring wells, MW2 and MW3.

The full Summary Report is being prepared And will be submitted as soon as it is finished.

The groundwater gradient has been calculated using the data obtained on October 7, 1999. The gradient was calculated to be 11 degrees east of south at a slope of 0.67 feet per 100 feet. The attached figure is a graphic representation of the calculated gradient.

Thank you for your assistance on this project. If there is any additional data required, please call me.

Sincerely,

John Carver
Civil Engineer
