**Re: Chevron Service Station #9-0260
21995 Foothill Boulevard, Hayward, CA**

Dear Mr. Arigala:

Enclosed is the Groundwater Monitoring and Sampling Activities report dated January 10, 1994, prepared by our consultant Groundwater Technology, Inc. for the above referenced site. Currently, monitor wells MW-6, MW-9, MW-11, and MW-13 are sampled during the 1st and 3rd quarters and monitor wells MW-4, MW-5, MW-7, MW-8, and MW-12 are sampled during the 2nd and 4th quarters. Monitor well MW-10 is sampled during the first quarter only. Monitor wells MW-14, MW-15, MW-16, and MW-17 are sampled during all four quarters. Depth to water measurements are taken from all wells on a quarterly basis to maintain knowledge of ground water flow direction and gradient.

As indicated in the report, groundwater samples collected were analyzed for total petroleum hydrocarbons as gasoline (TPH-G) and BTEX. The levels of dissolved hydrocarbon constituents in the ground water samples collected were consistent with previous observations at the site. Separate-phase hydrocarbons (SPH) were detected in monitor wells MW-5, MW-7, and MW-8 at thicknesses of 0.03, 0.67, and 0.32 feet, respectively. Chevron will instruct its consultant to remove the SPH during all future monitoring events.

Depth to groundwater was measured at approximately 13.1 to 23.1 feet below grade and the direction of flow is to the southwest.

The ground water extraction system at this site has removed approximately 175,000 gallons of hydrocarbon impacted ground water to date.

A vacuum-enhanced aquifer pumping test was recently performed at this site. Using the data from this test, we are currently evaluating additional remediation options. We anticipate formulating a cost-effective remedial approach during the second quarter of 1994.

Chevron will continue to monitor and sample all wells at this site in accordance with the schedule outlined above.

If you have any questions or comments, please do not hesitate to contact me at (510) 842-8134.

SUBJECT: *Groundwater Monitoring and Sampling Activities*
Chevron Service Station No. 9-0260
21995 Foothill Boulevard, Hayward, California

Dear Mr. Miller:

Groundwater Technology, Inc. presents the attached groundwater monitoring and sampling data collected on December 2, 1993. Eleven of the fourteen groundwater monitoring wells at this site were gauged to measure depth to groundwater (DTW) and to check for the presence of separate-phase hydrocarbons. Groundwater monitoring wells MW-4, MW-11, and MW-12 are pumping wells and were not accessible, monitoring wells MW-2 and MW-3 are tank pit back-fill wells. Separate-phase hydrocarbons were detected in monitoring wells MW-5, MW-7, MW-8, and MW-9 at thicknesses of 0.04, 0.19, 0.24 and 0.01 feet, respectively. A potentiometric surface map (Figure 1) and a summary of groundwater monitoring data (Table 1) are presented in Attachments 1 and 2, respectively. After the DTW was measured, monitoring wells MW-14, MW-15 and MW-16 were purged and sampled. The wells that were not sampled will be sampled during the next quarter or on an annual basis. The groundwater samples were analyzed for benzene, toluene, ethylbenzene, and xylenes and for total petroleum hydrocarbons-as-gasoline. Results of the chemical analyses are summarized in Table 1. The laboratory report and chain-of-custody record are included in Attachment 3. Monitoring-well purge water was removed by Groundwater Technology and transported to the Chevron Terminal in Richmond, California, for recycling.

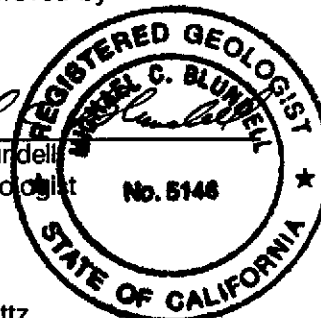

Groundwater Technology is pleased to assist Chevron on this project. If you have any questions or comments, please contact our Concord office at (510) 671-2387.

Sincerely,
Groundwater Technology, Inc.

NOTES TO TABLE 1
GROUNDWATER ANALYTICAL RESULTS
Chevron Service Station No. 9-0260 21995 Foothill Boulevard, Hayward, California

a	=	Samples analyzed by Fuel Fingerprint Analysis. EPA Method 524.2/8240 for total fuel and aromatic volatile hydrocarbons.
b	=	Sample was analyzed a second time after the holding time expired to confirm the high TPH-G concentration reported in the original analysis.
c	=	Estimated thickness
d	=	Not detected at detection limits ranging from 500 ppb to 2,000 ppb
e	=	Not detected at detection limits ranging from 0.5 ppb to 4.0 ppb
f	=	Chloroform detected. Detection limits ranging from 25 ppb to 500 ppb
TPH-G	=	Total petroleum hydrocarbons-as-gasoline
EDB	=	Ethylene dibromide
DTW	=	Depth to water
GWE	=	Groundwater elevation in feet above mean sea level
EDC	=	1,2-Dichloroethane
VOCs	=	Volatile Organic Compounds
SPT	=	Separate-phase hydrocarbon thickness
—	=	Not applicable, not sampled, not measured

Elevations are given as feet above mean sea level.

Concentrations shown in parts per billion.

Data from February 5, 1988, to December 3, 1992, taken from Weiss Associates report dated January 22, 1993.

Concord, CA 94520

Enclosed please find the analytical results for samples received by GTEL Environmental Laboratories, Inc. on 12/03/93.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria, unless otherwise stated in the footnotes.

GTEL is certified by the California State Department of Health Services, Laboratory certification number E1075, to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

If you have any questions concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

A handwritten signature in black ink, appearing to read 'Rashmi Shah', with a stylized flourish at the end.

Table 1

ANALYTICAL RESULTS

**Aromatic Volatile Organics and
 Total Petroleum Hydrocarbons as Gasoline in Water**

EPA Methods 5030, 8020, and Modified 8015a

GTEL Sample Number		01	02 ^b	03 ^c	05
Client Identification		TB-LB	RBMW14	MW14	MW15
Date Sampled		12/02/93	12/02/93	12/02/93	12/02/93
Date Analyzed		12/10/93	12/09/93	12/11/93	12/10/93
Analyte	Detection Limit, ug/L	Concentration, ug/L			
Benzene	0.5	<0.5	<0.5	0.8	28
Toluene	0.5	<0.5	<0.5	7	4
Ethylbenzene	0.5	<0.5	<0.5	3	8
Xylene, total	0.5	<0.5	<0.5	7	10
TPH as Gasoline	50	<50	<50	900	990
Detection Limit Multiplier		1	1	1	1
BFB surrogate, % recovery		108	99.6	93.2	106

- Test Methods for Evaluating Solid Waste, SW-846, Third Edition, Revision 0, US EPA November 1986. Modification for TPH as gasoline as per California State Water Resources Control Board LUFT Manual protocols, May 1988 revision. Bromofluorobenzene surrogate recovery acceptability limits are 70 - 130%.
- CCV's failed for this sample. No backup available to repeat analysis.
- Estimated concentration due to low TFT caused by matrix interference. Previous analysis of this sample showed similar results.
