RE: Product Recovery Volume-January 1993
Safety-Kleen Facility
400 Market Street
Oakland, California

Dear Ms. Lunt:

The purpose of this letter is to report the volume of product recovered during the first two weeks of January 1993 for the site referenced above. The recovery well (RW) and monitoring well MW-9 have been monitored for product thickness and the product has been removed from the wells by hand bailing on a weekly basis.

Table 1 (attached) provides a tabulation of product thickness measurements for the two wells and the approximate product volumes removed from the wells. Please note that the installation of the product recovery system was initiated on January 15, 1993. On that day, product was not bailed from RW to allow for startup testing of the product recovery system.

Please contact me if you have any questions or require additional information, I can be reached in our Concord office at (510) 671-2387.

Sincerely,
Groundwater Technology, Inc.

MICHAEL J. WRAY
Project Manager
