Hi Jerry,

Per our phone conversation, we would like to request an extension of the current deadline (May 31, 2013) for submittal of a Remedial Well Installation, Geochemical Sampling, and Dual-Phase Extraction Event Report to **August 30, 2013**. As you are aware, we encountered up to approx. 8' of pea gravel within the first location chosen for well installation activities. We are currently evaluating the possibility of installing the proposed remedial well (RW-1) beneath the canopy and further west of the existing UST basin (see attached Drawing). We plan to schedule a Site visit with Gregg Drilling within the next week or so to further assess the safety and height clearance issues associated with well installation between the pump islands and under the canopy. Completion of the DPE event has been postponed as use of the proposed remedial well during this event would be preferred. Please feel free to contact me directly with any comments, questions or concerns. Thank you. Talk with you soon.
