RE: Former BP Oil Site No. 11133  
2220 98<sup>th</sup> Avenue (at Bancroft)  
Oakland, CA

Dear Ms. Chu:

This letter transmits groundwater monitoring and sampling report dated 30 July 1997 and 5 September 1997 prepared on behalf of BP by Alisto Engineering Group.

A petroleum release was documented during the replacement of underground storage tanks by Mobil Oil Corporation during 1987. BP purchased the site from Mobil in 1989, and Mobil later transferred management of the cleanup to BP. BP subsequently sold the site to the current operator (Tosco Corporation) during 1994. To comply with 1998 requirements for leak detection and prevention, the current tanks are understood to require spill buckets around the fill ports, and containment pans beneath the dispensers. The current tanks are believed to be constructed of double-wall fiberglass.

The 30 July 1997 groundwater monitoring and sampling report includes laboratory data for samples collected on 14 April 1997. You will note that aromatic petroleum hydrocarbons were detected in samples obtained from wells MW-1, AW-1, and RW-1. The highest benzene concentration this quarter (38,000 µg/l) was detected in a sample obtained from well RW-1.

The 5 September 1997 groundwater monitoring and sampling report includes laboratory data for samples collected on 2 July 1997. You will note that aromatic petroleum hydrocarbons were detected in samples obtained from wells MW-1, AW-1, RW-1, and AW-4. The highest benzene concentration this quarter (19,000 µg/l) was detected in a sample obtained from well RW-1.

MTBE concentration data is now shown in Figure 3, replacing the dissolved oxygen measurements shown in past reports. You should note that estimated MTBE concentrations for samples analyzed during 1993 and 1994 are also shown on Table 1 - Summary of Results of Groundwater Sampling. Prior laboratory documentation is appended to the enclosed report; I have no other information regarding the suspected or confirmed presence of MTBE

# GROUNDWATER MONITORING AND SAMPLING REPORT

BP Oil Company Service Station No. 11133  
2220 98th Avenue  
Oakland, California

Project No. 10-025-13-004

September 5, 1997

## INTRODUCTION

This report presents the results and findings of the July 2, 1997 groundwater monitoring and sampling conducted by Alisto Engineering Group at BP Oil Company Service Station No. 11133, 2220 98th Avenue, Oakland, California. A site vicinity map is shown on Figure 1.

## FIELD PROCEDURES

Field activities were performed in accordance with the procedures and guidelines of the Alameda County Health Care Services Agency and the California Regional Water Quality Control Board, San Francisco Bay Region.

Before purging and sampling, the groundwater level in each well was measured from a permanent mark on top of the casing to the nearest 0.01 foot using an electronic sounder. The depth to groundwater and top of casing elevation data were used to calculate the groundwater elevation in each well in reference to mean sea level. The survey data and groundwater elevation measurements collected to date are presented in Table 1.

Before sample collection, each well was purged of 3 casing volumes, while recording field readings of pH, temperature, electrical conductivity, and dissolved oxygen. Groundwater samples were collected for laboratory analysis by lowering a bottom-fill, disposable bailer to just below the water level in the well. The samples were transferred from the bailer into laboratory-supplied containers. The water sampling field survey forms are presented in Appendix A.

## FREE PRODUCT MONITORING AND RECOVERY

A product recovery canister has been installed in Monitoring Well MW-1 to recover liquid-phase product. Product thicknesses for this and previous monitoring events are presented in Table 1. The volume of product recovered is presented in Table 2.

## SAMPLING AND ANALYTICAL RESULTS

The results of monitoring and laboratory analysis of the groundwater samples for this and previous quarters are summarized in Table 1. The potentiometric groundwater elevations as interpreted from the results of this monitoring event are shown on Figure 2. The results of groundwater analysis are shown on Figure 3. The laboratory report and chain of custody record are presented in Appendix B.

 SPL Southern Petroleum Laboratories

NOTES:

- (a) Top of casing elevations surveyed to the nearest 0.01 foot above mean sea level.
- (b) Groundwater elevations adjusted assuming a specific gravity of 0.75 for free product.
- (c) A copy of the documentation for this data is included in Appendix C of Alisto report 10-025-13-003.
- (d) MTBE peak. See documentation in Appendix C of Alisto report 10-025-13-003.
- (e) Blind duplicate.
- (f) Well inaccessible.
- (g) Duplicate.
- (h) EPA Methods 8020/8260 used.
- (i) Well not monitored and/or sampled due to vapor extraction system.
- (j) Travel blank.

**APPENDIX B**

**LABORATORY REPORT AND CHAIN OF CUSTODY RECORD**

July 16, 1997

Mr. Scott Hooton  
BP OIL COMPANY  
295 SW 41st ST., Blvd 13, Ste N  
Renton, WA 98055

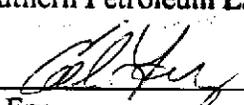

The following report contains analytical results for samples received at Southern Petroleum Laboratories (SPL) on July 8, 1997. The samples were assigned to Certificate of Analysis No(s).9707292 and analyzed for the parameters specified on the chain of custody.

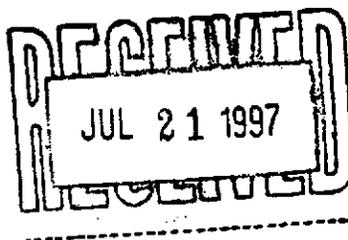

There were no analytical problems encountered with this group of samples and all quality control data was within acceptance limits.

If you have any questions or comments pertaining to this data report, please do not hesitate to contact me. Please reference the above Certificate of Analysis Number(s) during any inquiries.

Again, SPL is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.
