Spoke with Matt Herrick (BAI). He proposed to complete URS's proposed scope of work which consisted of nitrate/sulfate injection at the site as a pilot test. I informed him that ACEH prefers that an FS, which evaluate cleanup alternatives, is prepared first, then the most cost-effective technology can be pilot tested. Matt wishes to pilot test first, collect data, then evaluate different cleanup alternatives. I told him that he can do that, however, the approval letter will stipulate that since no FS was conducted, the costs may not be reimbursed by the UST cleanup Fund. He said he will now think about it.
