Re: Soil and Ground-Water Investigation Work Plan, Former BP Service Station #11133, 2220
98th Avenue, Oakland, Alameda County, California. Case No. RO0000403.

Dear Mr. Supple:

Broadbent & Associates, Inc. (BAI) is pleased to submit this Work Plan to conduct a soil and ground-water investigation at Former BP Service Station #11133 (herein referred to as Station #11133) located at 2220 98th Avenue, Oakland, California (Property). This Work Plan has been prepared in accordance with the Alameda County Environmental Health (ACEH) Letter dated January 16, 2009.

Should you have any questions concerning this Work Plan, please do not hesitate to contact us at (530) 566-1400.

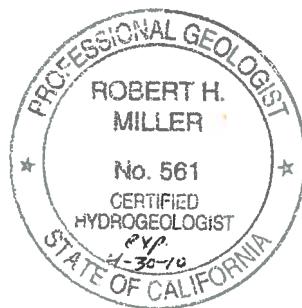

Sincerely,
BROADBENT & ASSOCIATES, INC.

Avenue, Oakland, California

1.0 Background

Provided herein is a Work Plan to conduct a soil and ground-water investigation at Station #11133 located in Oakland, California. The Property is currently a vacant lot located at the southeastern corner of 98th Avenue and Bancroft Avenue in Oakland. The land use in the immediate vicinity of the Site is mixed commercial and residential. The property consists of a flat lot covered with gravel, soil, concrete, and low lying vegetation. A site vicinity map is provided as Drawing 1. BP acquired the facility from Mobil Oil Corporation in 1989. In January 1994, BP transferred the property to TOSCO Marketing Company (now known as ConocoPhillips) and has not operated the facility since that time. TOSCO ceased gasoline retail operations on the Property in 1999.

During UST removal and replacement activities conducted by Kaprealian Engineering, Inc. in June 1987, five soil samples (A1, A2, B1, B2, and C1) were collected from the bottom of the tank cavity at depths of approximately 13.5 to 14 feet below land surface (bls). Total purgeable hydrocarbons as gasoline (TPHg) were detected in the soil samples at concentrations between 12 parts per million (ppm) (C1 at 13.5' bls) and 420 ppm (A1 at 13.5' bls). Benzene was detected at concentrations between 0.74 ppm (C1 at 13.5' bls) and 23 ppm (B1 at 13.5' bls).

In 1994, a soil vapor extraction (SVE) and ground-water treatment system were installed on-site. The SVE system began operation in November 1994 and was connected to eight vapor extraction wells (VW-1 through VW-3 and VEW-4 through VEW-8). Vapor extraction well VEW-9 was connected to the system in April 1996. The ground-water extraction system began operation in March 1995 and was connected to recovery well RW-1. Based on available operational data for the remediation system, as of December 27, 1995, a total of approximately 13,495.8 pounds of hydrocarbons had been removed from on-site soils by the system. Operational data for the SVE system after December 1995 was not found. Based on available operational data for the ground-water treatment system, as of December 14, 1998, a total of approximately 344.4 pounds of hydrocarbons had been removed from the system and operation of the system was discontinued.

Upon reviewing the case file for Station #11133, ACEH issued the January 16, 2009 Letter stating that hydrocarbon concentrations within off-site well AW-2 appear to be increasing and the down-gradient ground-water contaminant plume does not appear to be defined. Accordingly, this *Soil and Ground-Water Investigation Work Plan* has been prepared.

2.0 Scope of Work

The January 16, 2009 Letter from ACEH recommended justification that the ground-water contaminant plume is defined or preparation of a work plan to address the potential migration of contaminants down-gradient of the Site. Based on our review of the data from AW-2, further investigation work activities to the west and general downgradient direction appear warranted. It is important to note that the gradient direction over the last four monitoring events (July 2007 through October 2008) has been either westerly or west-southwest. Prior to 2007 the gradient direction fluctuated considerably. Accordingly, it is proposed that one boring be installed down-gradient and to the west of existing well AW-2 and be completed as monitor well AW-10. It is also proposed that one boring be installed approximately eight feet to the northeast of well AW-1 and be completed as well IW-1. It is anticipated that a well will be needed on this portion of the Property to facilitate

future remedial activities. The proposed well locations are depicted in Drawing 2. Table 1 includes a summary of ground-water monitoring data including relative water elevations and laboratory analyses. Table 2 provides a summary of fuel additives analytical data. Table 3 lists historic ground-water flow direction and gradient.

3.0 Project Setup

In accordance with the current contract with Atlantic Richfield Company, Stratus Environmental, Inc. (Stratus) will complete the field work associated with this soil and ground-water investigation (i.e., drilling, gauging, well installation, and sampling). Stratus will obtain any permits necessary prior to the initiation of field work. It is anticipated that an encroachment permit through the City of Oakland will be necessary for installation of off-site well AW-10 located on Bancroft Avenue. Once the field work is complete, Stratus will provide a data package which will include field notes, lithologic and well construction logs, laboratory analytical reports, and survey information from the investigation. BAI will then use this data package to generate a report for submittal to ACEH summarizing the soil and ground-water investigation including data interpretation and recommendations.

4.0 Soil Investigation

The proposed soil borings will be advanced using a hollow stem auger drilling technique. Soils will be lithologically logged by a qualified geologist using the Unified Soil Classification System (USCS). The expected depth to static ground-water in the vicinity of the proposed borings is estimated to be approximately 12 to 26 feet bls (based on the range of historic depth to ground-water measurements from wells AW-1 and AW-2 located in the general vicinity of the proposed borings). Soil samples will be collected at five foot intervals beginning five feet bls and continuing to just above the capillary fringe using a split-spoon sampler and brass sleeves. A minimum of three soil samples will be submitted for laboratory analysis. The three soil samples will include: (1) the deepest sample collected just above the capillary fringe, (2) the sample with the highest photo-ionization detector (PID) reading, and (3) a sample to be determined in the field. Each sample collected for submittal to a laboratory for analysis will be sealed on both ends with Teflon tape, capped with plastic end caps, labeled, and placed in an ice-filled cooler for preservation. The soil samples will be transported under chain-of-custody protocol to a California State-certified analytical laboratory and analyzed for the following:

- Gasoline range organics (GRO) and BTEX via EPA Method 8260B; and
- Fuel additives MTBE, tert-butyl alcohol (TBA), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), di-isopropyl ether (DIPE), 1,2-dichloroethane (1,2-DCA), 1,2-dibromoethane (EDB), and ethanol via EPA Method 8260B.

Investigation-derived residuals will be collected in 55-gallon steel drums, stored on the Property, and profiled prior to disposal at an approved Atlantic Richfield Company disposal facility.

5.0 Ground-Water Investigation

As stated above, depth to static ground water is expected to be between 12 and 26 feet bls. The proposed well design for AW-10 calls for a total well depth of 28 feet, with 15 feet of well

screen from total depth to 13 feet bls. Off-site well AW-10 will be constructed using two-inch diameter schedule 40 PVC well casing. The proposed well design for IW-1 calls for a total well depth of 30 feet, with 20 feet of well screen from total depth to 10 feet bls. On-site well IW-1 will be constructed using six-inch diameter schedule 40 PVC well casing. Both wells will use factory slotted well screen (0.02 inch slots) with flush threaded water tight connections. The casing will be surrounded by silica sand compatible with 0.02 inch slots in the annular space from total depth to three feet above top of screen. A sanitary seal will be installed consisting of approximately three feet of bentonite well-seal overlain by neat cement grout to the surface. The well head will be completed with a lockable water-tight plug and traffic rated monitor well vault.

Appropriate changes, if necessary, will be made to the total well depth and screen interval based on conditions encountered in the borehole during drilling activities.

Upon completion of well construction, the wells will be developed by surging/bailing or pumping water until relatively silt free water is removed from the well. Ground water will be removed until water quality parameters have stabilized. After development, the well will be left to hydraulically equilibrate prior to water level measurement and sampling. When equilibrated, depth to water and presence of free-phase product will be measured in the wells.

Prior to water sample collection, a minimum of three casing volumes of water will be purged from the wells. Purge water will be transported and disposed at an approved Atlantic Richfield Company disposal facility. Ground-water samples will be collected with factory decontaminated disposable bailers and placed in laboratory prepared containers. Samples will be labeled and chilled prior to transport under chain-of-custody protocol to a California State-certified analytical laboratory and analyzed for the following:

- GRO and BTEX via EPA Method 8260B; and
- Fuel additives MTBE, TBA, ETBE, TAME, DIPE, 1,2-DCA, EDB, and ethanol via EPA Method 8260B.

A California-licensed Professional Land Surveyor will be scheduled to survey the well heads and other relevant structures and land features. All elevations will be surveyed with respect to mean sea level. The survey information will be used to generate an accurate site map and ground water gradient map. A site map, the lithologic and monitor well construction logs, and well survey information will be uploaded to GeoTracker.

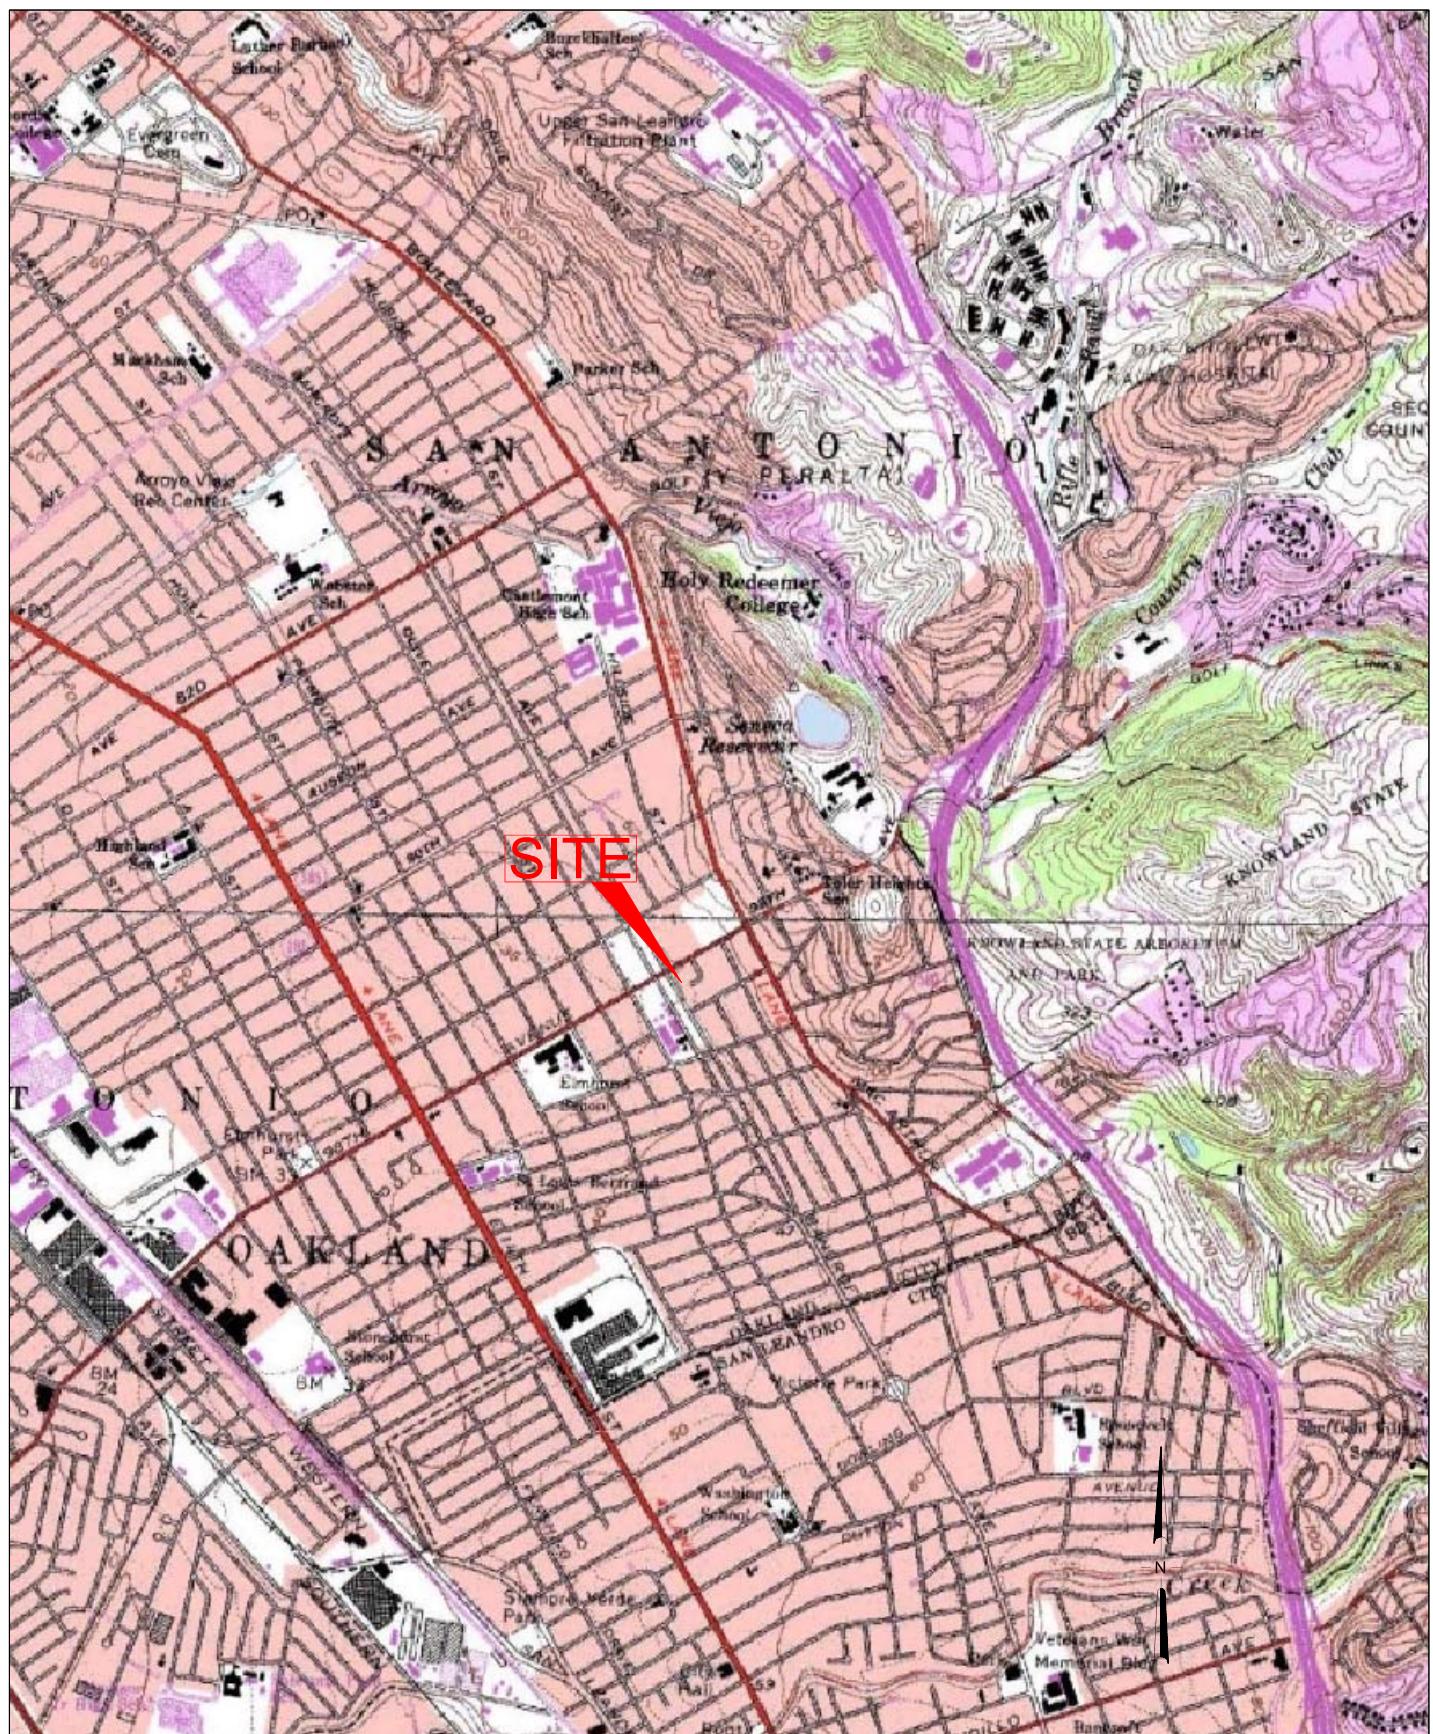

6.0 Schedule and Reporting

Once the ACEH has approved this Soil and Ground-Water Investigation Work Plan, Stratus will be directed to execute the work. As stated above, to facilitate installation of off-site well AW-10, it is anticipated that Stratus will need to request an encroachment permit through the City of Oakland prior to commencement of field work. Based on our recent experience at other sites in Oakland where an encroachment permit has been necessary, it seems to take several months for the City of Oakland to process the permit request. Upon completion of field work and receipt of a data packet from Stratus summarizing field activities including laboratory analytical reports, BAI will complete a soil and ground-water investigation report for submittal to the ACEH.

In accordance with the ACEH January 16, 2009 Letter, BAI is also working on a Feasibility Study/Corrective Action Plan for Station #11133 which will be submitted to the ACEH for review once completed.

7.0 Closure

Our services will be performed in accordance with the generally accepted standard of practice at the time work commences. Results and recommendations will be based on review of available documentation and written or verbal correspondence with appropriate regulatory agencies, laboratory results, observations of Stratus field personnel, and the points investigated. No other warranty, expressed or implied is made.

ABBREVIATIONS & SYMBOLS:

-- = Not analyzed/applicable/measured/available

< = Not detected at or above specified laboratory reporting limit

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

ft MSL = Feet above mean sea level

GRO = Gasoline range organics

GWE = Groundwater elevation in ft MSL

mg/L = Milligrams per liter

MTBE = Methyl tert-butyl ether

NP = Well not purged prior to sampling

P = Well purged prior to sampling

TOC = Top of casing in ft MSL

TPH-g = Total petroleum hydrocarbons as gasoline

µg/L = Micrograms per liter

ANA = Anametrix, Inc.

PACE = Pace, Inc.

ATI = Analytical Technologies, Inc.

CEI = Ceimic Corporation

SPL = Southern Petroleum Laboratories

SEQ/SEQM= Sequoia Analytical/Sequoia Analytical Morgan Hill Laboratories

CEL = CalScience Environmental Laboratories, Inc.

FOOTNOTES:

c = A copy of the documentation for this data is included in Appendix C of Alistoreport 10-025-13-003.

d = MTBE peak. See documentation in Appendix C of Alisto report 10-025-13-003.

e = Blind duplicate.

f = Well inaccessible.

g = EPA Methods 8020/8260 used.

h = Well not monitored and/or sampled due to vapor extraction system.

i = Travel blank.

j = This gasoline does not include MTBE.

k = Well was sampled on a different date from the other wells due to lack of proper equipment.

l = Unable to sample due to nature of product.

m = A copy of the documentation for this data is included in Blaine Tech Services, Inc., Report 010724-B-2. The data for sampling events January 14, 1993 and April 22, 1993 has been destroyed. No chromatograms could be located for samples AW-2 on January 27, 1994, and for samples AW-1, AW-2, AW-3, AW-4, AW-5, AW-6, AW-7, AW-8, MW-2 and MW-3 on September 9, 1994.

n = On June 1, 2001, after reviewing chromatograms, Sequoia reported the value as <5.0.

o = Unable to locate well.

p = TPH-g data analyzed by EPA Method 8015B modified; BTEX and MTBE by EPA Method 8021B

q = TPH-g, BTEX, and MTBE analyzed by EPA method 8260B beginning on the third quarter 2003 sampling event 07/07/03.

r = Discrete peak at C5.

t = Well was not gauged during the quarter due to an oversite by the technician.

u = Sheen in well.

v = Well was dry.

w = Hydrocarbon result partly due to individ. peak(s) in quant. range.

NOTES:

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in the second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for DO and pH were obtained through field measurements.

GWEs adjusted assuming a specific gravity of 0.75 for free product

GRO analysis was completed by EPA method 8260B (C4-C12) for samples collected from the time period April 2006 through February 4, 2008. The analysis for GRO was changed to EPA method 8015B (C6-C12) for samples collected from the time period February 5, 2008 through the present.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

Table 2. Summary of Fuel Additives Analytical Data

ABBREVIATIONS & SYMBOLS:

-- = Not analyzed/applicable/measured/available
< = Not detected at or above specified laboratory reporting limit
1,2-DCA = 1,2-Dichloroethane
DIPE = Di-isopropyl ether
EDB = 1,2-Dibromoethane
ETBE = Ethyl tert-butyl ether
MTBE = Methyl tert-butyl ether
TAME = tert-Amyl methyl ether
TBA = tert-Butyl alcohol
µg/L = Micrograms per Liter

FOOTNOTES:

a = Calibration verification for ethanol is within method limits but outside contractual limits.

NOTES:

All volatile organic compounds analyzed using EPA Method 8260B.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

Table 3. Historical Ground-Water Flow Direction and Gradient

Station #11133, 2220 98th Ave., Oakland, CA

| Date Sampled | Approximate Flow Direction | Approximate Hydraulic Gradient |
|-------------------|------------------------------------|--------------------------------|
| 1/25/2006 | Variable: East to Southwest | 0.03 to 0.09 |
| 7/6/2006 | Variable: East to W towards Center | 0.04 to 0.05 |
| 1/8/2007 | Variable: East to W towards Center | 0.03 to 0.05 |
