BACKGROUND

The subject site contains a Tosco 76 service station facility. Two underground fuel storage tanks, one waste oil tank, and the product piping were removed from the site in November and December of 1989 during tank replacement activities. During March and April of 1991, approximately 2,000 cubic yards of contaminated soil were excavated from the area in the vicinity of the former (pre-1967) fuel tank pit. The soil excavation was conducted to a depth of approximately 1 foot below ground water (11 feet below grade). Ten monitoring wells, two exploratory borings, and a Hydropunch study (seven probe locations) have been installed/performed at and in the vicinity of the site. No free product has been detected in any well to date. ORC was installed in MW-6 in August 1998. Groundwater wells are monitored and sampled annually in February. Prepared and submitted a SCM. Submitted a Work Plan for off-site well installation and initiated access for well installation.

RECENT QUARTER ACTIVITIES

The quarterly summary report was prepared and submitted. Resubmitted Work Plan with revised off-site well location.

NEXT QUARTER ACTIVITIES

The quarterly summary report will be prepared and submitted. Continue to attempt to gain off-site access.
