BACKGROUND

The subject site contains a Tosco service station facility. Two underground fuel storage tanks, one waste oil tank, and the product piping were removed from the site in November and December of 1989 during tank replacement activities. During March and April of 1991, approximately 2,000 cubic yards of contaminated soil were excavated from the area in the vicinity of the former (pre-1967) fuel tank pit. The soil excavation was conducted to a depth of approximately 1 foot below ground water (11 feet below grade). Ten monitoring wells, two exploratory borings, and a Hydropunch study (seven probe locations) have been installed/performed at and in the vicinity of the site. No free product has been detected in any well to date. ORC was installed in MW-6 in August 1998. Groundwater wells are monitored and sampled annually in February. Prepared and submitted a SCM. Submitted a Work Plan for offsite well installation and initiated access for well installation. Resubmitted Work Plan with revised offsite well location in fourth quarter 2000. Offsite and downgradient groundwater monitoring well MW-11 was installed in 3rd Quarter 2001 and was reported as not detected for petroleum hydrocarbons.

RECENT QUARTER ACTIVITIES: The quarterly summary report was prepared and submitted. The groundwater monitoring wells were monitored and sampled.

NEXT QUARTER ACTIVITIES: The groundwater monitoring wells will be monitored and sampled. Monitor and sample all wells.
