Hi Dilan,

Not sure if you have begun your review of the vapor barrier in this case yet, but just want to let you know that Chevron has some input on the proposed design, so we are modifying now. I will follow up with you when we get the updated design. Thanks.

John

Hi Dilan,

Following up on the above-referenced case. To bring you up to speed, the project sponsor is proposing the expansion of the existing gas station structure at 4276 MacArthur Blvd in Oakland, to be operated as a convenience store associated with the gas station. We have prepared the attached plans to incorporate a vapor intrusion barrier system. We are seeking your department's approval that this solution is adequate given the current site conditions. Would you please let me know if there is anything else you need from our team to conduct your review? I would be happy to hop on the phone discuss if that would be helpful. Thanks Dilan.

John

Dilan - Thanks in advance for your help. Just by way of introduction, I'm a government affairs consultant for Mr. Goswamy and will be representing him in communications with the Oakland Planning Department. John, cc'ed, is Mr. Goswamy's environmental / land use attorney. We look forward to working with you!

Ms Dilan
Hello, how are you? My name is Rajan Goswamy. I am the property owner of the case number listed above as mentioned by Chevron and AECOM in correspondence to ACEH. I am planning to expand the convenience store at my facility. I have started to consult with some Environmental companies to install the Vapor intrusion barrier beneath the new construction. I would like to know if Alameda County Environmental Health Department needs to approve the design and implementation of the vapor intrusion mitigation system, or should I just include the vapor intrusion barrier plans with the city of Oakland permit applications. Please advise.

Sincerely,
Raj Goswamy
