PORT OF OAKLAND

RECEIVED
By Alameda County Environmental Health at 2:09 pm, Feb 14, 2014

7 February 2014

Mr. Keith Nowell
Alameda County Health Care Services Agency
Department of Environmental Health
1131 Harbor Bay Parkway, Suite 250
Alameda, CA 94502-6577

Subject: Transmittal of Technical Memorandum - Information Requested by Department of Environmental Health related to the Oakland Maintenance Center Site, 1100 Airport Drive Oakland, California (Site#: RO00000414 – MOIA, United Airlines)

Dear Mr. Nowell:

Please find attached the above-referenced technical memorandum prepared by BASELINE Environmental Consulting providing information requested by the Alameda County Environmental Health Care Services Agency, Department of Environmental Health related to the Oakland Maintenance Center Site.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge.

Please feel free to contact me at the Port of Oakland at (510) 627-1184 if you have any questions.

Sincerely,

Douglas Herman
Environmental Scientist
Port of Oakland

BASELINE ENVIRONMENTAL CONSULTING

TECHNICAL MEMORANDUM

Date: 7 February 2014 **Job No.:** 12315-20.02130

To: Keith Nowell and Dilan Roe, Alameda County Health Care Agency, Department of Environmental Health

From: Lydia Huang

Subject: **Information Requested by Alameda County Health Care Services Agency, Department of Environmental Health on the Oakland Maintenance Center Site, Toxic Leaks Case RO0000414**

A meeting was held between the Port of Oakland ("Port") and staff of the Alameda County Health Agency, Department of Environmental Health ("DEH") on 25 October 2013 to discuss the Port's No Further Action request for the entire Oakland Maintenance Center ("OMC") Site.[1] During the meeting, DEH staff requested additional information/data compilation to facilitate their review of the No Further Action request. This memorandum provides the requested information. The Port looks forward to meeting with DEH on 20 February 2014 to discuss the information transmitted in this memorandum and identify tasks needed to achieve case closure for the OMC Site.

1. ***Outdoor air, direct contact and indoor air exposure from soil:*** *Provide tables that show concentrations of total petroleum hydrocarbons ("TPH") (diesel and gasoline), benzene, toluene, ethylbenzene, and xylenes, and naphthalene in soil left in-place at the three underground storage tank ("UST") locations (MF23/24, MF25/26, and MF35/36). The data will be grouped into the 0 to 5 feet below the ground surface interval, and the 5 to 10 feet depth interval.*

USTs MF23/24 and MF35/36. These two pairs of USTs received No Further Action letters from DEH in 1996 (MF23/24) and 1999 (MF35/36). Excerpts of tank removal and investigation reports with soil quality data associated with these two pairs of USTs that supported the No Further Action determinations are provided in Attachment A. In addition, soil quality data collected from the vicinity of the USTs during subsequent investigations conducted for other purposes are summarized in Table B-1 for the 0 to 5 feet and 5 to 10 feet intervals in Attachment B. While the data are provided as requested, it is the Port's position that the No Further Actions previously issued for MF23/24 and MF35/36 do not need re-evaluation under the Low-Threat Underground Storage Tank Case Closure Policy.

[1] No Further Action was requested in the report titled *Final Report, Closure Documentation for the Former Oakland Maintenance Center (OMC), Oakland International Airport, 1100 Airport Drive, Oakland, California*, prepared by URS Corporation and dated October 31, 2012.

USTs MF25/26. Soil quality data associated with USTs MF25/26 collected since 2003 are summarized in Tables B-2a, B-2b for TPH and Tables B-3a and B-3b for volatile organic compounds ("VOCs") in Attachment B for the 0 to 5 feet and 5 to 10 feet intervals, respectively. Historical data collected prior to 2003 have not been tabulated. It appears that this information was requested in the context of assessing media-specific criteria 3 (Direct Contact and Outdoor Air Exposure) in the Low-Threat Underground Storage Tank Case Closure Policy. It should be noted that the current and anticipated future use of the MF25/26 area is long-term car parking and the surface is completely paved with asphalt. The Port has submitted a draft Risk Management Plan for mitigating potential construction worker contact with residual contaminants in soil and groundwater when subsurface work is conducted in the MF25/26 area.[2]

2. ***Indoor air exposure from groundwater:*** *Provide a table that shows concentrations of benzene in groundwater. The DEH is concerned that because the groundwater table is shallow, the site lacks a 10-foot bioattenuation zone.*

Table C-1 in Attachment C summarizes benzene concentrations in groundwater from 2003 onward. Benzene has been detected in groundwater samples only from the MF25/26 area. The concern related to a lack of a bioattenuation zone is associated with media-specific criteria 2 (Petroleum Vapor Intrusion to Indoor Air) in the Low-Threat Underground Storage Tank Case Closure Policy, which is not applicable to the MF25/26 area as there are no current or planned future buildings nearby.

3. ***Adequacy of the monitoring well network:*** *Provide a table that shows well construction details (e.g. total depth, screened intervals) of all monitoring wells at 1100 Airport Drive, and indicate existing versus destroyed wells. The Port will compile available groundwater elevation data to evaluate groundwater flow direction(s) to assess well placement.*

Table D-1 in Attachment D summarizes well construction details for the 33 groundwater monitoring wells installed at the OMC Site. Wells MW-1, MW-2, and MW-3 associated with USTs MF23/24 were abandoned in January 1997 after the Port received a No Further Action letter from DEH. The Port has no documentation for the installation of wells UAL-MW-4 and UAL-MW-5; the only information available for these two wells is the total depth which was measured during an investigation in 2003. Wells MW-1, MW-2, and MW-3 installed to investigate USTs MF23/24 were destroyed in 1997 after DEH issued a No Further Action letter for these USTs; documentation of well destruction is on DEH's website (WELL_DCM_R_1997-01-17.pdf).

[2] *Draft Risk Management Plan, Former Oakland Maintenance Center, Oakland International Airport, Oakland, California*, prepared by URS Corporation and dated January 17, 2013.

Groundwater level measurements since 2003 are summarized in Table D-2 (except earlier data are included for MW-1 to MW-3 in the MF23/24 area as these wells were destroyed earlier). The table also lists the top of the screened interval in the wells and indicates instances when the groundwater was higher than the top of the screened interval.

The majority of the investigations conducted at the OMC since about 1988 focused on small areas as most investigations were limited to one of the 3 UST areas (MF23/24, MF25/26, and MF35/36). As a result, the majority of the events where groundwater levels were measured involved only a small number of wells covering a small area. Only during two investigations were the groundwater levels measured in many wells spanning across the OMC Site. Groundwater elevation contours for data collected during the January 2004 and June 2006 monitoring events are shown in Figure D-1. Additional contours of data for only the USTs MF25/26 area from November 1999, March 2000, and August 2011 are shown on Figure D-2.

4. ***Updated ESLs:*** *Screen the Areas of Concern ("AOC") data presented in the URS October 31, 2012 report using updated Environmental Screening Levels ("ESLs") from the Regional Water Quality Control Board ("RWQCB").*

The Tier 1 and 2 screening tables for the 19 AOCs presented in the URS October 31, 2012 report have been updated using the RWQCB's December 2013 ESLs and USEPA's November 2013 Regional Screening Levels ("RSLs") and are provided in Attachment E . The tables are the same as those in the URS report except for the updated screening values and the table numbers. The table numbers is correlated to those in the URS report; for example, Table 2-1a in the URS report corresponds to Table E-1a in Attachment E.

The Tier 2 groundwater screening for ecological receptors done for the tables in Attachment E applied a different logic from the corresponding screening done in the URS October 31, 2012 report. For Tier 2 groundwater screening for ecological receptors, the URS October 31, 2012 report applied a dilution attenuation factor ("DAF") of 27.5 to the ESLs for the protection of estuarine aquatic habitat. This was done based on the assumption that the nearest surface water discharge point is 2,750 feet away and the DAF is equal to the distance divided by 100 feet (as used in the San Francisco International Airport site cleanup requirements adopted by the RWQCB). In the updated Tier 2 groundwater screening presented in Attachment E, the distance to the nearest discharge point is assumed to be 700 feet, corresponding to the distance from the MF25/26 area to the nearest storm water drainage ditches located north of the OMC Site. Updated Tier 3 screening has not been conducted at this time.

5. ***Ecological receptors:*** *Evaluate the potential for shallow groundwater with or without free product to pose a risk to ecological receptors.*

Potential ecological receptors in the vicinity of the OMC Site may be present in a 0.19-acre drainage ditch considered a jurisdictional wetland by the Army Corps of Engineers. This ditch is located about 700 feet in the northwesterly direction from the MF25/26 area; water in the ditch drains eventually to Pump House 6 which discharges to a muted tidal lagoon connected to San Francisco Bay at the southwestern corner of the airport.

Groundwater from the MF25/26 area could flow toward and discharge to the drainage ditch or be discharged to the ditch via preferential pathways created by storm drains in the area. TPH and VOC concentrations for samples collected from the eight wells installed in the MF25/26 area from 2003 onward are summarized in Tables F-1 and F-2 in Attachment F and screened against ESL ceiling levels for groundwater, ceiling limits for surface water (not a drinking water source), and Tier 2 ecological receptor values.

6. ***Vertical delineation:*** *Assess the potential for vertical downward migration of constituents in the groundwater.*

The South Field of the airport was filled from open shallow waters of the San Francisco Bay by placing dredged materials inside the constructed perimeter dike around the south field. The area immediately around the OMC was initially at least partially filled beginning in the late 1950s. The OMC facility, originally constructed as a hangar for World Airlines, was not constructed until around 1970. Young Bay Mud lay beneath the shallow bay waters and fill was placed directly on top of the Young Bay Mud. The presence of the Young Bay Mud at the OMC Site is confirmed by logs from wells and borings that have been installed.

Borings logs from eight borings installed in the MF25/26 area in 2011 by Kennedy/Jenks Consultants for the Port encountered Young Bay Mud at the bottom of all the borings.[3] The top of the Young Bay Mud was encountered between 8.5 to 11 feet below the ground surface ("bgs"), and extended to the maximum depth explored which was between 12 and 15 feet. Logs from a geotechnical investigation of the area around the OMC Site prior to the construction of the building provide additional confirmation of the presence of the Young Bay Mud layer (Attachment G). The presence of the Young Bay Mud across the OMC Site is a barrier to potential vertical migration of near-surface contaminants in groundwater.

[3] *Letter Report for Additional Investigation of Former Tanks MF25 & MF26, Oakland Maintenance Center, Oakland International Airport, 1100 Airport Drive, Oakland, California,* prepared by Kenndy/Jenks Consultants, dated 10 January 2012 (File name "SWI_R_2012-01-10.pdf" on DEH website).

7. ***How to quantify non-detects:*** *If Upper Confidence Limit calculations were used in the Tier 3 screening, explain and provide backup of how the calculations were done.*

Upper confidence limits were not calculated in the URS October 31, 2012 report. The URS report made reference to Tier 3 screening by ERM-West on behalf of United Airlines in a June 2004 report. Details appeared to have been provided in Appendix I of that report.

Should the Port present upper confidence limit calculations in future evaluations, the methods used will be clearly explained and documented in submittals to DEH.

1 Test Method = EPA 8015M for 1988 samples; DHS-LUFT for 1991 samples.
2 Test Method = EPA 8240 for Stockpile-1 sample; EPA 8020 for all other samples.
3 Other reported as TPH by the analytical laboratory.
4 Sample also analyzed for Title 26 metals; barium (39.1 mg/kg), beryllium (0.11 mg/kg), chromium (23.1 mg/kg), cobalt (4.9 mg/kg), copper (7.0 mg/kg) nickel (23.2 mg/kg), vanadium (16.3 mg/kg), zinc (21.3 mg/kg) detected; all concentrations are below TTLCs and less than ten times STLC values.
5 Sample also analyzed for hazardous waste fish bioassay (100% survival), ignitability (not ignitable) and pH (7.19).
6 Sample was analyzed for ignitability (not ignitable).
7 Samples were collected from the side walls of the excavation above the water table.

Notes: <x.x = Not detected at stated detection level.
x.x = Constituent identified above detection level.
-- = Constituent not analyzed.
The soil sample locations are shown on Figure 3.
The laboratory report for the 1991 samples are included in Appendix C.

TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics
Bolding indicates detected concentrations.
< = analyte was not detected at or above the laboratory reporting limit.
NA = not analyzed
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

TABLE B-2a *(Portion of URS Table 2-8)*
Post 2002 Data Set - MF25/MF26 - Soil Results - TPH Concentrations in Soil from 0 to 5 Feet Interval

Sample Location	Sample Depth	Date Sampled	TPH-d		TPH-g	TPH-jf		TPH-mo

Notes
Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in milligrams per kilogram (mg/kg).
Only analytes that have at least one detection are shown.
< = analyte was not detected at or above the laboratory method detection limit
TPH-d = total petroleum hydrocarbon as diesel range organics
TPH-g = total petroleum hydrocarbon as gasoline range organics
TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics

Qualifiers
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes
(a) Gross contamination screening level value is based on Table H-2 Components for Ceiling Levels in Shallow Soil (RWQCB 2013).

Notes

Bolding indicates detected concentrations.

All units are in milligrams per kilogram (mg/kg).

Only analytes that have at least one detection are shown.

< = analyte was not detected at or above the laboratory method detection limit

NS = no standard

Footnotes

(a) Gross contamination screening level value is based on Table H-2 Components for Ceiling Levels in Shallow Soil (RWQCB 2013).

Qualifiers

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Notes

Bolding indicates detected concentrations.

All units are in milligrams per kilogram (mg/kg).

Only analytes that have at least one detection are shown.

< = analyte was not detected at or above the laboratory method detection limit

NS = no standard

Footnotes

(a) Gross contamination screening level value is based on Table H-2 Components for Ceiling Levels in Shallow Soil (RWQCB 2013).

Qualifiers

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary tc accurately and precisely measure the analyte in the sample.

Notes

Bolding indicates detected concentrations.

< = analyte was not detected at or above the laboratory reporting limit.

Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

NOTES:

Coordinates are in NAD83, State Plane, California Zone 3.

POO Datum = Port of Oakland datum which is 0.50 feet below the NAVD88 datum.

NAVD88 = North American Vertical Datum of 1988.

-- = None.

PVC= polyvinylchloride.

[1] Well was destroyed in 1997 after No Further Action was issued by DEH for MF 23/24.

[2] Coordinates are estimated.

[3] The Port has no information regarding the construction of this well. Well depth was determined by measurement.

feet bgs = feet below ground surface.
feet POO = feet relative to Port of Oakland vertical datum.
= Water levels for MW-1 to MW-3 installed for MF23/24 are also included since these wells were abandoned prior to 2003.
* = top of groundwater above top of screened interval.
** = value suspected to be in error and not included for contours shown on Figure D-1.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in milligrams per kilogram (mg/kg).
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
IP =incomplete pathway
NA = not analyzed
sg = silica gel clean up
TPH-d = total petroleum hydrocarbon as diesel range organics
TPH-g = total petroleum hydrocarbon as gasoline range organics
TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes

(a) Tier-1 airport and construction worker screening level value is based on commercial values in Table B Environmental Screening Levels (ESLs) Shallow Soils Where Groundwater is Not a Current or Potential Source of Drinking Water (RWQCB December 2013). If there are no ESLs available, USEPA industrial soil RSLs (November 2013).
(b) Analyte analyzed by a second method.

Notes

Bolding indicates detected concentrations.

All units are in milligrams per kilogram (mg/kg).

Only analytes that have at least one detection and have exceeded the Tier-1 screening level are shown.

< = analyte was not detected at or above the laboratory method detection limit

-- = not applicable

ESL = environmental screening level

IP = Incomplete pathway (not evaluated quantitatively)

NA = not analyzed

sg = silica gel clean up

TPH-d = total petroleum hydrocarbon as diesel range organics

TPH-g = total petroleum hydrocarbon as gasoline range organics

TPH-jf = total petroleum hydrocarbon as jet fuel

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes

(a) Tier-2 construction worker screening level value is based on Table K-3 Environmental Screening Levels (ESLs) Direct Exposure Soil Screening Levels Construction/Trench Worker Exposure Scenario (RWQCB December 2013).

(b) Analyte analyzed by a second method.

Notes

Bolding indicates detected concentrations.

All units are in milligrams per kilogram (mg/kg).

Only analytes that have at least one detection are shown.

< = analyte was not detected at or above the laboratory method detection limit

ESL = environmental screening level

IP =incomplete pathway
NA = not analyzed
NS = no ESL standard

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.

Footnotes

(a) Tier-1 airport and construction worker screening level value is based on commercial values in Table B Environmental Screening Levels (ESLs) Shallow Soils Where Groundwater is Not a Current or Potential Source of Drinking Water (RWQCB December 2013). If there are no ESLs available, USEPA industrial soil RSLs (November 2013).

(c) Analyzed by a second lab.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in milligrams per kilogram (mg/kg).
Only analytes that have at least one detection are shown.
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
IP =incomplete pathway
NA = not analyzed

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes

(a) Tier-1 airport and construction worker screening level value is based on commercial values in Table B Environmental Screening Levels (ESLs) Shallow Soils Where Groundwater is Not a Current or Potential Source of Drinking Water (RWQCB December 2013). If there are no ESLs available, USEPA industrial soil RSLs (November 2013).
(c) Analyzed by a second lab.
(d) Reanalyzed by graphite furnace.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.

Bolding indicates detected concentrations.

All units are in milligrams per kilogram (mg/kg).

Only analytes that have at least one detection and have exceeded the Tier-1 screening level are shown.

< = analyte was not detected at or above the laboratory method detection limit

ESL = environmental screening level

IP =incomplete pathway

NA = not analyzed

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes

(a) Tier 2 construction worker screening level value is based on Table K-3 Environmental Screening Levels (ESLs) Direct Exposure Soil Screening Levels Construction/Trench Worker Exposure Scenario (RWQCB December 2013).

(c) Analyzed by a second lab.

(d) Reanalyzed by graphite furnace.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection are shown.
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
NA = not analyzed
sg = silica gel clean up
TPH-d = total petroleum hydrocarbon as diesel range organics
TPH-g = total petroleum hydrocarbon as gasoline range organics
TPH-ho = total petroleum hydrocarbon as hydraulic oil
TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the
Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes

(a) Tier-1 airport and construction worker screening level value is based on commercial values in Table B Environmental Screening Levels (ESLs) Shallow Soils Where Groundwater is Not a Current or Potential Source of Drinking Water (RWQCB December 2013). Tier-1 ecological receptor screening level value is based on estuarine values in Table F Environmental Screening Levels (ESLs) Surface Water Bodies (RWQCB December 2013).
(b) Analyte analyzed by a second method.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection and have exceeded the Tier-1 screening level are shown.
< = analyte was not detected at or above the laboratory method detection limit
DAF = dilution attenuation factor
ESL = environmental screening level
NA = not analyzed
NS = no ESL standard
sg = silica gel clean up
TPH-d = total petroleum hydrocarbon as diesel range organics
TPH-g = total petroleum hydrocarbon as gasoline range organics
TPH-ho = total petroleum hydrocarbon as hydraulic oil
TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
Y = Sample exhibits chromatographic pattern which does not resemble standard

Footnotes

(a) Tier-2 airport and construction worker screening level value is based on commercial values in Table E-1 Environmental Screening Levels (ESLs) Groundwater Screening Levels (RWQCB December 2013). Tier-2 Ecological receptor screening level value is based on estuarine values in Table F-4a Summary of Selected Aquatic Habitat Goals (RWQCB December 2013) multiplied by DAF of 7.
(b) Analyte analyzed by a second method.

Notes
Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection are shown.
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
NA = not analyzed
NS = no ESL standard

Qualifiers
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes
(a) Tier-1 airport and construction worker screening level value is based on commerical values in Table B Environmental Screening Levels (ESLs) Shallow Soils Where Groundwater is Not a Current or Potential Source of Drinking Water (RWQCB December 2013). Tier-1 ecological receptor screening level value is based on estuarine values in Table F Environmental Screening Levels (ESLs) Surface Water Bodies (RWQCB December 2013).
(b) Analyte analyzed by a second method.
(c) Analyzed by a second lab.

Airport Worker Tier-2 (a)			NS	4800	220	10000
Construction Worker Tier-2 (a)			NS	4800	220	10000
Ecological Receptor Tier-2 (a)			330	22	150	1300
Area of Concern 19						
W-B-25	19	4/16/2003	<0.5	<0.5	<1	<0.5
W-B-29	19	4/16/2003	<0.5	<0.5	<1	<0.5

Notes

Bolding indicates detected concentrations.

All units are in micrograms per liter (ug/L).

Only analytes that have at least one detection and have exceeded the Tier-1 screening level are shown.

< = analyte was not detected at or above the laboratory method detection limit

DAF = dilution attenuation factor

ESL = environmental screening level

NA = not analyzed

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.

UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes

(a) Tier-2 airport and construction worker screening level value is based on commercial values in Table E-1 Environmental Screening Levels (ESLs) Groundwater Screening Levels, All sand (RWQCB December 2013). Tier-2 Ecological receptor screening level value is based on estuarine values in Table F-4a Summary of Selected Aquatic Habitat Goals (RWQCB December 2013) multiplied by DAF of 7.

(b) Analyte analyzed by a second method.

(c) Analyzed by a second lab.

Notes
Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection are shown.
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
IP =incomplete pathway
NA = not analyzed

Qualifiers
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes
(a) Tier-1 ecological receptor screening level value is based on estuarine values in Table F Environmental Screening Levels (ESLs) Surface Water Bodies (RWQCB December 2013).
(b) Analyte analyzed by a second method.
(c) Analyzed by a second lab.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection and have exceeded the Tier-1 screening level are shown.
< = analyte was not detected at or above the laboratory method detection limit
DAF = dilution attenuation factor
ESL = environmental screening level
IP = incomplete pathway
NA = not analyzed

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
Q = Data not validated and there is a high uncertainty associated with the quality adequacy of the data.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Footnotes

(a) Tier-2 Ecological receptor screening level value is based on estuarine values in Table F-4a Summary of Selected Aquatic Habitat Goals (RWQCB December 2013) multiplied by DAF of 7.
(b) Analyte analyzed by a second method.
(c) Analyzed by a second lab.

Notes

Yellow highlighting indicates an exceedance of the selected ESL.
Bolding indicates detected concentrations.
All units are in micrograms per liter (ug/L).
Only analytes that have at least one detection are shown.
QCFD-1_20110823 is a duplicate of MW-4_20110823.
< = analyte was not detected at or above the laboratory method detection limit
ESL = environmental screening level
NA = not analyzed
TPH-d = total petroleum hydrocarbon as diesel range organics
TPH-g = total petroleum hydrocarbon as gasoline range organics
TPH-ho = total petroleum hydrocarbon as hydraulic oil
TPH-jf = total petroleum hydrocarbon as jet fuel
TPH-mo = total petroleum hydrocarbon as motor oil range organics

Footnotes

(a) Groundwater gross contamination screening level value is based on Table I-2 Groundwater Ceiling Levels (Groundwater is Not a Current or Potential Source of Drinking Water). Surface water gross contamination level is based on Table I-4 Surface Water Ceiling Levels (Surface Water is Not a Current or Potential Source of Drinking Water). Tier-2 Ecological receptor screening level value is based on estuarine values in Table F-4a Summary of Selected Aquatic Habitat Goals multiplied by DAF of 7 (RWQCB 2013)

Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the
Y = Sample exhibits chromatographic pattern which does not resemble standard

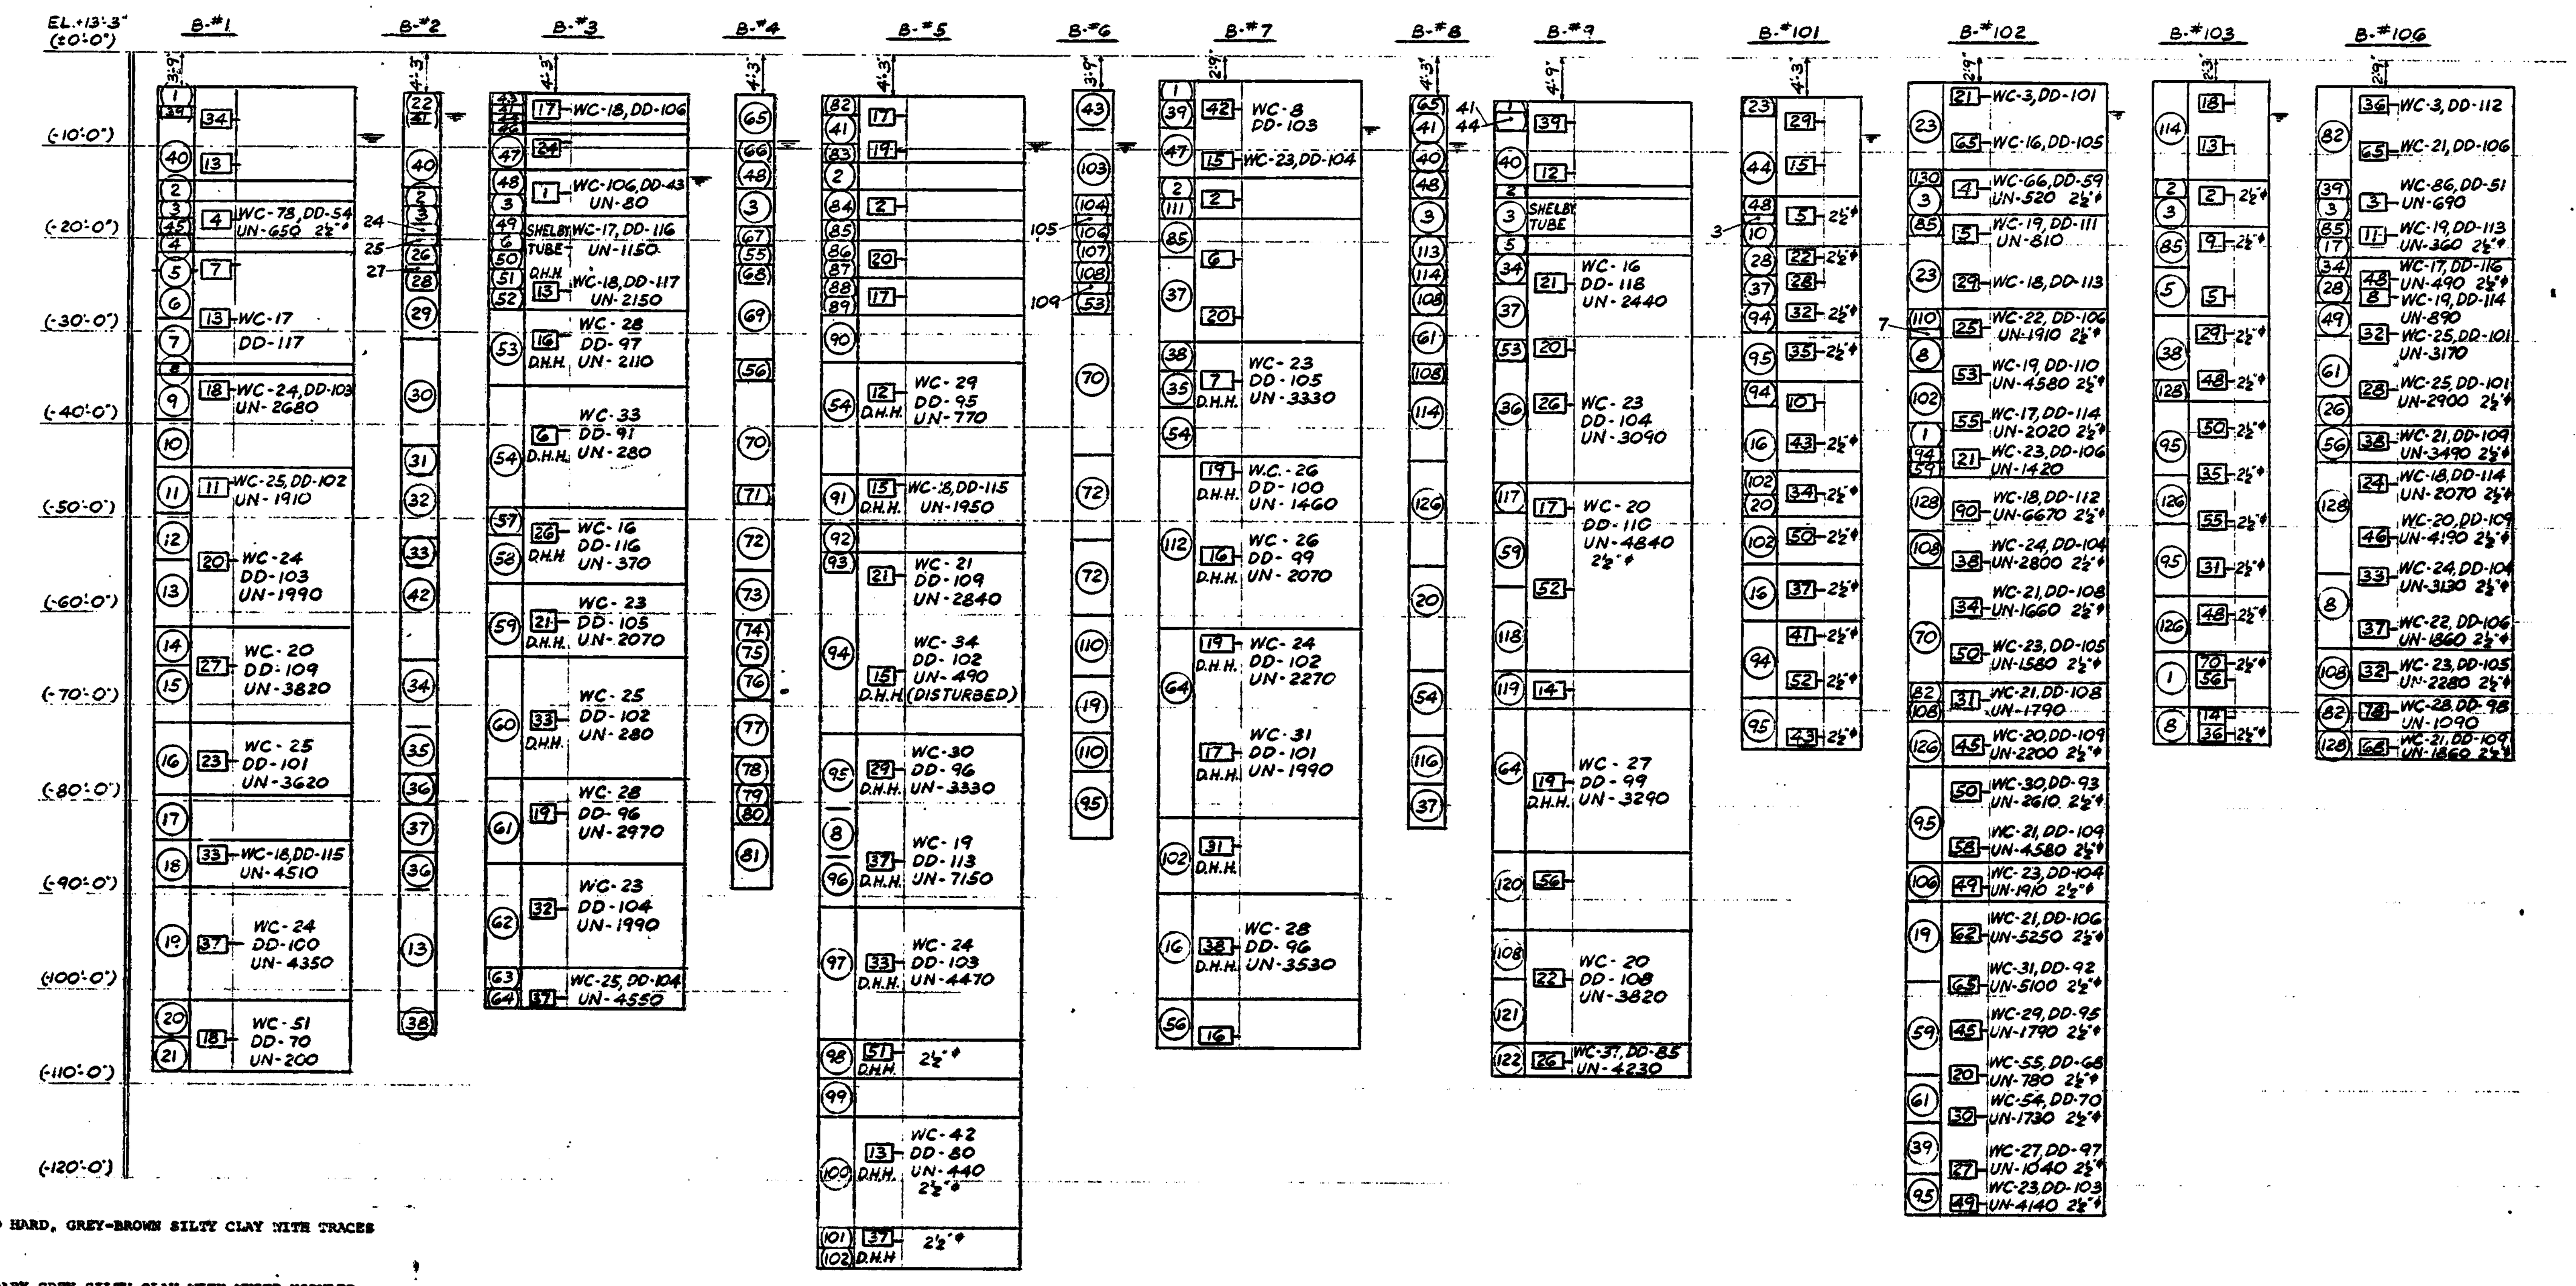
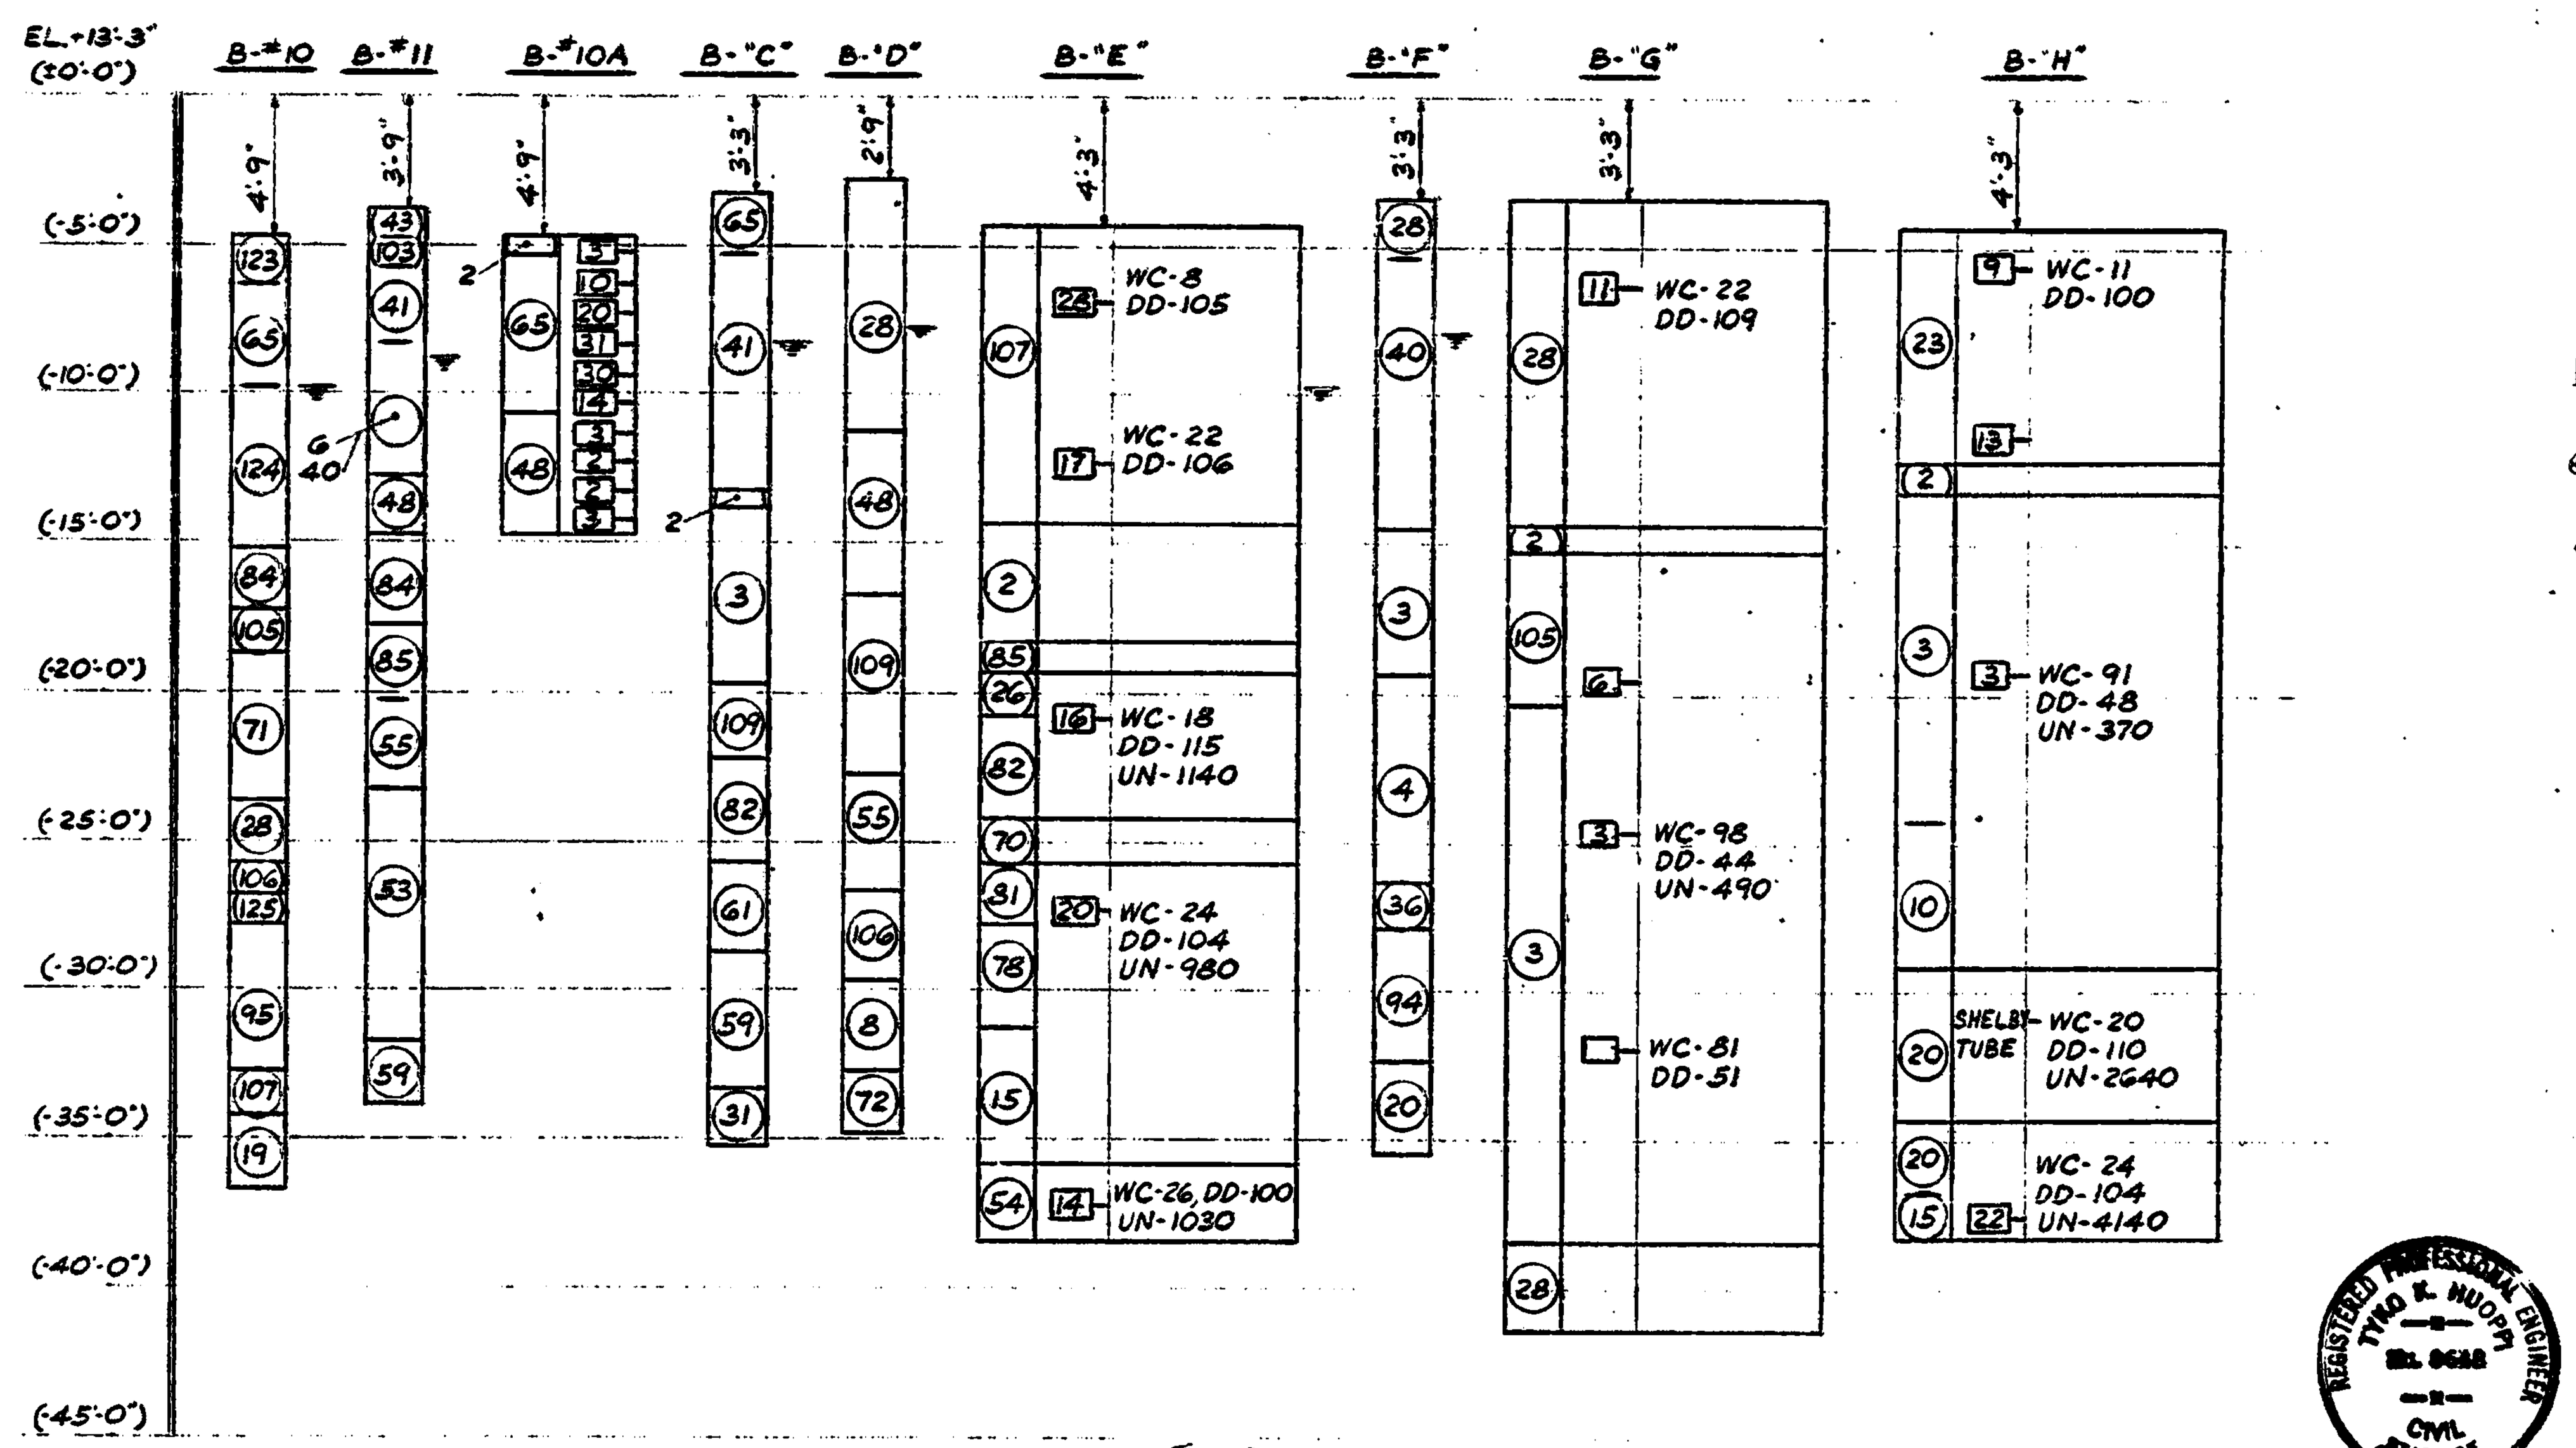
BORING LOCATION PLAN

SCALE: 1"=200'





SOIL DESCRIPTION

1. DENSE TO MEDIUM DENSE, DRY, BROWN-GREY SAND
2. SOFT, BROWN - GREY SILTY CLAY WITH SAND LENSES (HYDRAULIC FILL)
3. SOFT, DARK GREY SILTY CLAY (BAY MUD).
4. LOOSE, BLACK CLAYEY SAND WITH ORGANIC MATERIAL.
5. LOOSE, GRAY CLAYEY SAND.
6. LOOSE TO MEDIUM DENSE.
7. MEDIUM DENSE, DARK BLUE-GREY SAND.
8. STIFF, ~~DARK BLUE GREY SILTY GRAY~~
9. STIFF, TAN SILTY CLAY WITH ORGANIC MATERIAL AND WHITE NODULES.
10. WITH SANDY LENSES
11. MEDIUM TO STIFF, MOTTLED TAN TO BROWN SANDY SILTY CLAY.
12. WITH SANDY CLAY AND CLAYEY SAND LENSES.
13. TAN
14. STIFF, BLUE-GREY TO GREY FINE SANDY SILTY CLAY.
15. VERY STIFF
16. STIFF TO VERY STIFF, GREY SILTY CLAY WITH SANDY CLAY LAYERS.
17. MEDIUM DENSE, BLUE-GREY CLAYEY SAND.
18. VERY STIFF, GREY SILTY CLAY WITH SANDY CLAY.
19. VERY STIFF, TAN SILTY CLAY.
20. STIFF, GREY SILTY CLAY.
21. MEDIUM STIFF, LIGHT GREY SILTY CLAY AND SHELLS.
22. MEDIUM DENSE, DRY, GREY FINE SAND WITH TRACES OF SHELLS.
23. LOOSE, MOIST GREY SAND.
24. WITH PEAT
25. LOOSE TO MEDIUM DENSE, BLACK ORGANIC SAND
26. STIFF, BLUE-GREEN SANDY CLAY.
27. CLAYEY SAND.
28. MEDIUM DENSE, BROWN-GREY SAND.
29. SILTY SAND.
30. MEDIUM DENSE, DARK BLUE-GREY CLAYEY SAND.
31. STIFF TO VERY STIFF, TAN SILTY CLAY.
32. WITH WHITE NODULES
33. VERY STIFF, GREY-BROWN GRAVELLY CLAY.
34. STIFF, BLUE-GREY FINE SANDY CLAY.
35. STIFF TO VERY STIFF, GREY.
36. VERY STIFF, GREY SILTY CLAY.
37. MEDIUM DENSE, GREY CLAYEY SAND.
38. STIFF, BLUE-GREY TO GREY SILTY CLAY.
39. MOIST AND TRACES OF SHELLS
40. WET
41. MOIST
42. TAN, SANDY
43. MEDIUM DENSE, DRY, GREY SAND
44. WITH MUD BALLS AND SHELLS.
45. SOFT, SANDY WITH TRACES OF ORGANIC MATERIAL.
46. SOFT, WET, DARK GREY SILTY CLAY.
47. MEDIUM DENSE, SATURATED, GREY SAND.
48. SOFT, BROWN SILTY CLAY (HYDRAULIC FILL)
49. LOOSE, DARK GREY CLAYEY SAND.
50. MEDIUM DENSE, GREEN-GREY CLAYEY SAND.
51. SILTY, BROWN GREY.
52. CLAYEY, BLUE-GREY.
53. STIFF TO VERY STIFF, DARK BLUE SILTY CLAY (OLD MUD)
54. MEDIUM TO STIFF, BROWN-GREY SILTY CLAY.
55. MEDIUM DENSE, BLUE-GREEN CLAYEY SAND.
56. STIFF TO VERY STIFF, GREEN-GREY SILTY CLAY.
57. MEDIUM DENSE, BROWN CLAYEY SAND.
58. MEDIUM DENSE, GREY-BROWN SAND AND FINE GRAVEL.
59. VERY STIFF, GREY-BROWN SILTY CLAY.
60. STIFF TO MEDIUM, GREY-BROWN SANDY SILTY CLAY WITH MEDIUM DENSE, SANDY SILT LENSES.
61. STIFF TO VERY STIFF, BLUE GREY SILTY CLAY.
62. STIFF, GREY AND BROWN-GREY SILTY CLAY WITH LAYERS OF SANDY AND GRAVELLY CLAY WITH WHITE NODULES.
63. MEDIUM DENSE, GREY-BROWN CLAYEY SAND WITH SAND.
64. STIFF TO VERY STIFF, GREY SILTY CLAY.
65. MEDIUM DENSE, DAMP, GREY-BROWN SAND.
66. SATURATED
67. MEDIUM TO STIFF, DARK GREY TO BLACK SILTY SANDY CLAY.
68. STIFF TO VERY STIFF, DARK GREY TO BLACK SILTY CLAY.
69. MEDIUM TO STIFF GREY.
70. MEDIUM TO STIFF, BROWN SILTY CLAY.
71. VERY STIFF, BROWN SANDY CLAY.
72. STIFF TO VERY STIFF, BROWN SILTY CLAY.
73. STIFF TO VERY STIFF, GREY-BROWN FINE SANDY SILTY CLAY.
74. STIFF TO VERY STIFF, GREY-BROWN SILTY CLAY.
75. MEDIUM TO STIFF, SANDY SILT
76. WITH VERY STIFF LAYERS
77. STIFF, BROWN SANDY CLAY WITH CLAYEY SAND AND CLAYEY SILT LENSES.
78. MEDIUM TO STIFF, GREY-BROWN TO DARK GREY SILTY CLAY.
79. STIFF, GREY FINE SILTY SANDY CLAY.
80. MEDIUM TO STIFF, SILTY.
81. STIFF, DARK BLUE-GREY CLAY.
82. MEDIUM DENSE, DAMP, GREY-BROWN SILTY SAND.
83. MEDIUM DENSE, SATURATED.
84. SOFT, DARK GREY TO BLACK SILTY CLAY (BAY MUD).
85. LOOSE, BLACK CLAYEY SAND.
86. STIFF, BLACK CLAYEY SAND TO SANDY CLAY.
87. GREY CLAYEY SAND
88. MEDIUM DENSE, BROWN SILTY CLAYEY SAND.
89. GREY BROWN
90. STIFF DARK BLUE-GREY SILTY CLAY TO FAT CLAY.
91. STIFF TO VERY STIFF, MOTTLED GREY TO BROWN-GREY FINE SANDY SILTY CLAY.
92. MEDIUM DENSE, GREY-BROWN FINE GRAVEL.
93. VERY STIFF, GREY-BROWN SANDY SILTY CLAY WITH TRACES OF GRAVEL.
94. STIFF TO VERY STIFF, GREY-BROWN FINE SANDY CLAY.
95. VERY STIFF DARK GREY SILTY CLAY.
96. VERY STIFF TO HARD, PLASTIC
97. VERY STIFF TO HARD, GREY-BROWN SILTY CLAY WITH TRACES OF GRAVEL.
98. VERY STIFF, DARK GREY SILTY CLAY WITH WHITE NODULES.
99. STIFF TO VERY STIFF, BLUE CLAY AND SHELLS.
100. LOOSE, LIGHT BLUE SHELLS AND CLAY.
101. STIFF, DARK BLUE-GREY SILTY CLAY WITH THIN SAND LENSES.
102. VERY STIFF, DARK GREY SANDY CLAY.
103. DAMP
104. SOFT, GREY-BLUE SILTY CLAY (BAY MUD).
105. LOOSE BLACK ORGANIC SAND.
106. VERY STIFF, GREY SANDY CLAY.
107. MEDIUM DENSE, BROWN SILTY SAND.
108. STIFF, BROWN SANDY CLAY.
109. MEDIUM DENSE, GREY SILTY SAND.
110. MEDIUM STIFF, GREY SANDY CLAY.
111. SOFT, BLACK SILTY CLAY WITH SAND LENSES.
112. STIFF, ~~BROWN~~-GREY VERY SILTY CLAY, IN PLACES SANDY.
113. MEDIUM DENSE, DARK GREY TO BLACK CLAYEY SAND.
114. LOOSE TO MEDIUM DENSE, GREY-BROWN TO BROWN WITH SILTY SAND LENSES.
116. STIFF TO VERY STIFF. MOTTLED BROWN-GREY TO DARK GREY SILTY CLAY.
117. MEDIUM GREY-BROWN SANDY SILTY CLAY TO CLAYEY SILT.
118. MEDIUM DENSE GREY-BROWN FINE CLAYEY GRAVEL TO A SILTY GRAVEL.
119. MEDIUM, GREY SANDY CLAY TO A CLAYEY SAND.
120. HARD, GREY SILTY CLAY.
121. CLAYEY SAND.
122. VERY STIFF, LIGHT GREY SILTY CLAY WITH TRACES OF LIME NODULES.
123. MEDIUM DENSE TO DENSE, DRY, BROWN SILTY SAND.
124. WET, YELLOW BROWN
125. MEDIUM DENSE BLUE SILTY SAND.
126. STIFF TO VERY STIFF, GREY-BROWN SILTY SANDY CLAY
127. LOOSE, BLACK SILTY SAND.
128. STIFF TO VERY STIFF, OLIVE, SANDY CLAY.
129. MEDIUM DENSE, GREY BROWN, VERY CLAYEY SILT.
130. LOOSE YELLOW-BROWN CLAYEY SILT.
131. LOOSE TO MEDIUM DENSE, BLACK SILTY CLAYEY SAND.
