Project No. 95-113.54

Mr. Douglas Herman  
Assistant Environmental Scientist  
Port of Oakland  
530 Water Street  
Oakland, CA 94607

**Tank Closure Report**  
**Port of Oakland Tank Numbers GF-11 and GF-12**  
**Pacific Dry Dock (Crowley Yard II)**  
**325 Embarcadero Street**  
**Oakland, California**

Dear Mr. Herman:

Two underground storage tanks (USTs) were removed on June 30, 1998 from Pacific Dry Dock (Crowley Yard II) located at 325 Embarcadero Street. The USTs were removed by Claus Construction as part of their demolition contract with the Port of Oakland. Innovative Technical Solutions, Inc (ITSI) was contracted by the Port of Oakland to perform compliance sampling during removal of the USTs and to prepare the Tank Closure Report upon completion of the project. Mr. Hernan Gomez of the City of Oakland Fire Services Agency and representatives from the Port of Oakland were on site to witness and document UST removal activities.

Figure 1 shows the approximate location of the site, and Figure 2 shows the site layout and approximate locations of the former USTs. Tank Nos. GF-11 and GF-12 were 5,000-gallon single-walled steel USTs. According to Port of Oakland personnel, the USTs were thought to contain unleaded gasoline. The age of the USTs is unknown. Removal of the USTs was performed according to the Underground Tank Closure Plan prepared by Claus Construction and approved by the City of Oakland Fire Services Agency, Office of Emergency Services, Hazardous Materials Program. A copy of the approved Underground Tank Closure Plan is provided in Attachment A.

## **UST REMOVAL**

On June 30, 1998, Claus Construction exposed the tops of the two USTs. Overlying concrete and soil removed from the UST excavations was temporarily stockpiled adjacent to each UST

excavation and ultimately used as backfill for the UST excavations. Approximately 3,000 gallons of fluid was removed from the USTs and then transported by Ecology Control Industries (ECI) to Evergreen Oil, Inc. in Newark, California for recycling. Based on visual observation, it appeared that the USTs contained used oil instead of unleaded gasoline as previously suspected. Consequently, Port of Oakland personnel requested that soil and water samples be analyzed for waste oil per the "California Regional Water Quality Control Board Recommended Minimum Verification Analyses for Underground Tank Leaks, Table 2". A copy of the Uniform Hazardous Materials Manifest for the fluid removed from the USTs is presented in Attachment B.

As documented in the June 30, 1998 Inspection Report prepared by Mr. Herman Gomez, the lower explosive limit (LEL) and percent oxygen ( $O_2$ ) content inside the USTs prior to removal were 0% and 20%, respectively, for both USTs. Following approval by Mr. Gomez, the USTs were removed from the excavations by Claus Construction. Due to the proximity of Tank No. GF-11 to an adjacent concrete structure, two holes had to be cut in the UST in order to secure the crane hooks for removal. ITSI documented the removal activities, and collected soil and water samples from the excavations.

Photograph A (Figure 3) shows Tank No. GF-11 after removal from the excavation. Except for moderate pitting and oxidation, no apparent holes or cracks were observed in Tank No. GF-11. The condition of the pipe connections along the top of the UST could not be determined because of the heavily incrusted soil and oxidation. The exterior of the UST appeared to be covered with an oily product residue.

Photograph B (Figure 3) shows Tank No. GF-12 after removal from the excavation. The condition of the UST was the same as Tank No. GF-11 except that no holes had to be cut into the UST to remove the UST and no oily product residue was visible on the exterior of the UST.

At both UST locations, piping from the USTs extended beneath adjacent buildings. Piping encountered during excavation activities was cut to within 5 feet from the edge of the buildings and removed. One section of cut piping contained two holes, up to 1/2-inch in diameter (Photograph C, Figure 4). It is unknown whether this section of piping was used to carry product. Piping which extended beneath the buildings was left in place. The USTs and associated sections of piping, including product and vent lines, were loaded on to ECI trucks for transportation to the Erickson, Inc. facility in Richmond, California for destruction. Copies of the Uniform Hazardous Waste Manifest and Certificate of Destruction are included in Attachment B.

not uniform?

Dimensions of the excavations from the USTs are shown on Figure 2. The excavation for Tank No. GF-11 was approximately 20 feet long and 8 to 11 feet wide. Groundwater was encountered in the excavation at a depth of 6 feet below ground surface (bgs). Small pools of product floating on the groundwater were observed at the southwest end of the excavation (Photograph D, Figure 5). Apparent product staining was observed in the soil on the southwestern wall of the excavation from approximately 3 feet bgs to groundwater. Soil in the excavation consisted of sand with gravel (fill material).

The excavation for Tank No. GF-12 was approximately 19 feet long and 13 feet wide. Groundwater was encountered in the excavation at a depth of 7 1/2 feet bgs. An oily sheen was observed on the groundwater with droplets of oil floating on the water. Soil in the excavation consisted of sand with gravel (fill material) and appeared discolored approximately 6 feet bgs extending to groundwater. Photograph E (Figure 5) shows the excavation after removal of Tank No. GF-12.

## UST EXCAVATION SOIL AND WATER SAMPLING

Four soil samples and 2 water samples were collected from the UST excavations by ITSI personnel on June 30, 1998. The soil samples were collected at the soil-water interface near each end of the USTs with the aid of a backhoe. The locations of the soil samples are shown in Figure 2. The water samples were collected from the water which had accumulated in the UST excavations. The water sample was collected using clean disposable bailers and placed into laboratory provided containers.

Soil samples from the UST excavations were collected from the backhoe bucket. Once the backhoe had obtained the soil from the soil-water interface, the bucket was brought to the surface for sample collection and a 2-inch diameter by 6-inch long clean brass tube was hand driven into the soil in the backhoe bucket. Soil samples were then fitted on each end with a Teflon patch and covered with a plastic friction cap.

Soil and water sample containers were labeled with sample number, date and time of collection, and the samplers' initials. The sample containers were sealed into plastic Zip-lock® bags, placed on ice in an insulated cooler, and transported under chain-of-custody procedures to Curtis and Tompkins, Ltd. In Berkeley, California, the Port of Oakland contract laboratory.

Soil and groundwater samples were analyzed for:

- Total Petroleum Hydrocarbons as gasoline (TPHg) by Modified EPA Method 8015.
- Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) by EPA Method 8020A.
- Methyl-tertiary-Butyl-Ether (MTBE) by EPA Method 8020A.
- Total Extractable Petroleum Hydrocarbons quantified as diesel (TPHd) and motor oil (TPHmo) by Modified EPA Method 8015 with Silica Gel Cleanup procedure.
- Oil and Grease (O&G) by SMWW 17 : 5520BF Method.
- Halogenated Volatile Organic Compounds (HVOCs) by EPA Method 8260.
- Semivolatile Organic Compounds (SVOCs) by EPA Method 8270B.
- LUFT Metals (Cd, Cr, Ni, Pb, Zn) by EPA 6010A.

Analytical results for the soil and water samples are presented in Table 1 (Petroleum Hydrocarbons), Table 2 (HVOCS and SVOCs) and Table 3 (Metals), and are summarized below:

Tank No. GF-11Soil in the excavation (soil samples S-A-7'-N and S-A-7'-S)

- TPHg was reportedly detected at a concentration of 8.9 mg/kg in soil sample S-A-7'-N (collected from the northern end of the UST excavation) and 7.6 mg/kg in soil sample S-A-7'-S (collected from the southern end of the UST excavation).
- BTEX and MTBE were reportedly not detected.
- TPHd was reportedly detected at a concentration of 2,800 mg/kg at the northern end of the UST excavation and 300 mg/kg at the southern end of the UST excavation.
- TPHmo was reportedly detected at a concentration of 3,100 mg/kg at the northern end of the UST excavation and 590 mg/kg at the southern end of the UST excavation.
- Oil and grease was reportedly detected at a concentration of 650 mg/kg at the northern end of the UST excavation and 130 mg/kg at the southern end of the UST excavation.
- HVOCs reportedly detected were chlorobenzene and 1,4-dichlorobenzene at concentrations of 6.1 and 5.0 µg/kg, respectively, at the southern end of the UST excavation.
- SVOCs were reportedly detected at both ends of the UST excavation with the highest concentrations detected at the northern end. The highest SVOC concentrations reported were acenaphthene at a concentration of 210 µg/kg, fluorene at 240 µg/kg, phenanthrene at 1,300 µg/kg, anthracene at 380 µg/kg, fluoranthene at 1,600 µg/kg, pyrene at 1,700 µg/kg, benzo(a)anthracene at 770 µg/kg, chrysene at 920 µg/kg, benzo(b,k)fluoranthene at 1,200 µg/kg, and benzo(a)pyrene at 540 µg/kg.
- Metal constituents (chromium, lead, nickel and zinc) were reported at less than 10 times the Soluble Threshold Limit Concentrations (STLC) for these constituents.

Groundwater in the excavation (groundwater sample W-TP-A)

- TPHg was reportedly detected at a concentration of 1,000 µg/l.
- Ethylbenzene and xylenes were reportedly detected at concentrations of 1.3 and 0.5 µg/l, respectively.
- MTBE was reportedly detected at a concentration of 3.8 µg/l.
- TPHd was reportedly detected at a concentration of 91,000 µg/l.
- Oil and grease was reportedly not detected.
- HVOCs reportedly detected were chlorobenzene at a concentration of 32 µg/l, 1,4-dichlorobenzene at 8.9 µg/l, and 1,2-dichlorobenzene at 5.5 µg/l.

- SVOCs reportedly detected were phenanthrene at a concentration of 150 µg/l, anthracene at 130 µg/l, fluoranthene at 1,400 µg/l, pyrene at 1,700 µg/l, benzo(a)anthracene at 930 µg/l, chrysene at 880 µg/l, benzo(b,k)fluoranthene at 1,600 µg/l, benzo(a)pyrene at 760 µg/l, indeno(1,2,3-cd)pyrene at 250 µg/l, and benzo(g,h,i)perylene at 260 µg/l.
- Metal constituents (chromium, lead, nickel and zinc) were reportedly detected with chromium, lead and nickel at concentrations in excess of their respective Maximum Contaminant Levels (MCLs).

### Tank No. GF-12

#### Soil in the excavation (soil samples S-B-8'-N and S-B-8'-S)

- TPHg was reportedly not detected in soil sample S-B-8'-N (collected from the northern end of the UST excavation) and 14 mg/kg was detected in soil sample S-B-8'-S (collected from the southern end of the UST excavation).
- BTEX and MTBE were reportedly not detected.
- TPHd was reportedly detected at a concentration of 270 mg/kg at the northern end of the UST excavation and 640 mg/kg at the southern end of the UST excavation.
- TPHmo was reportedly detected at a concentration of 1,400 mg/kg at the northern end of the UST excavation and 740 mg/kg at the southern end of the excavation.
- Oil and grease was reportedly detected at a concentration of 230 mg/kg at the northern end of the UST excavation and 430 mg/kg at the southern end of the UST excavation.
- HVOCs were reportedly not detected.
- SVOCs were reportedly detected at both ends of the UST excavation with the highest concentrations detected at the northern end. The highest SVOC concentrations reported were acenaphthene detected at a concentration of 350 µg/kg, fluorene at 470 µg/kg, phenanthrene at 3,800 µg/kg, anthracene at 1,100 µg/kg, fluoranthene at 6,400 µg/kg, pyrene at 5,000 µg/kg, benzo(a)anthracene at 3,100 µg/kg, chrysene at 3,400 µg/kg, benzo(b,k)fluoranthene at 4,900 µg/kg, benzo(a)pyrene at 1,200 µg/kg, indeno(1,2,3-cd)pyrene at 430 µg/kg, and dibenzo(a,h)anthracene at 410 µg/kg.
- Metal constituents (chromium, lead, nickel and zinc) were reported at less than 10 times the STLC for these constituents.

#### Groundwater in the excavation (groundwater sample W-TP-B)

- TPHg was reportedly detected at a concentration of 1,000 µg/l.
- BTEX and MTBE were reportedly not detected.
- TPHd was reportedly detected at a concentration of 34,000 µg/l.
- Oil and grease was reportedly detected at a concentration of 56,000 µg/l.

- HVOCs were reportedly not detected.
- SVOCs reportedly detected were fluoranthene at a concentration of 90 µg/l, pyrene at 150 µg/l, benzo(a)anthracene at 59 µg/l, chrysene at 38 µg/l, and benzo(a)pyrene at 51 µg/l.
- Metal constituents (chromium, lead, nickel and zinc) were reportedly detected with chromium and lead at concentrations in excess of their respective MCLs.

## STOCKPILE SAMPLING

On June 30, 1998, ITSI collected 2 four-container composite soil samples from the excavated soil temporarily stockpiled onsite. One composite soil sample, designated S-SP1-A,B,C,D, was collected from approximately 15 to 18 cubic yards of soil removed from the excavation of Tank No. GF-11. The second composite soil sample, designated S-SP2-A,B,C,D, was collected from approximately 20 cubic yards of soil removed from the excavation of Tank No. GF-12.

Soil samples were collected by initially clearing away the top 6 to 12 inches of soil using a clean stainless steel trowel and then manually pushing a clean brass sleeve into the soil at each location. Each composite soil sample represented four discrete sample locations. Soil samples were labeled with sample number, date and time of collection, and the samplers' initials. The samples were then sealed into plastic Zip-lock® bags, placed on ice in an insulated cooler, and transported under chain-of-custody procedures to Curtis and Tompkins, Ltd. in Berkeley.

The stockpile soil samples were analyzed according to the previously referenced analytical schedule. Analytical results from the stockpile soil samples are presented in Tables 1, 2 and 3 and are summarized below:

### Stockpile at Tank No. GF-11 (S-SP1-A,B,C,D)

- TPHg was reportedly detected at a concentration of 7.1 mg/kg.
- BTEX and MTBE were reportedly not detected.
- TPHd was reportedly detected at a concentration of 620 mg/kg.
- TPHmo was reportedly detected at a concentration of 1,900 mg/kg.
- Oil and grease was reportedly detected at a concentration of 470 mg/kg.
- HVOCs were reportedly not detected.
- SVOCs reportedly detected were phenanthrene at a concentration of 470 µg/kg, fluoranthene at 2,700 µg/kg, pyrene at 3,400 µg/kg, benzo(a)anthracene at 1,900 µg/kg, chrysene at 2,300 µg/kg, benzo(b,k)fluoranthene at 3,700 µg/kg, benzo(a)pyrene at 1,200 µg/kg, and indeno(1,2,3-cd)pyrene at 410 µg/kg.
- Metal constituents (chromium, lead, nickel and zinc) were reported at less than 10 times the STLC for these constituents.

Stockpile at Tank No. GF-12 (S-SP2-A,B,C,D)

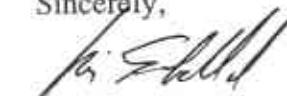

- TPHg was reportedly detected at a concentration of 1.1 mg/kg.
- BTEX and MTBE were reportedly not detected.
- TPHd was reportedly detected at a concentration of 240 mg/kg.
- TPHmo was reportedly detected at a concentration of 910 mg/kg.
- Oil and grease was reportedly detected at a concentration of 180 mg/kg.
- HVOCs were reportedly not detected.
- SVOCs reportedly detected were fluoranthene at a concentration of 460 µg/kg, pyrene at 540 µg/kg, chrysene at 380 µg/kg, and benzo(b,k)fluoranthene at 680 µg/kg.
- Metal constituents (chromium, nickel and zinc) were reported at less than 10 times the STLC for these constituents. Lead was reportedly detected at a concentration of 52 mg/kg, slightly greater than 10 times the STLC of 5 mg/kg.

A copy of the laboratory reports, chromatograms, and chain-of-custody form for the soil and groundwater samples are included in Attachment C.

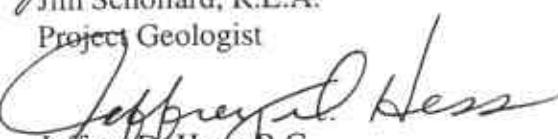

According to Claus Construction, the stockpiled soil and concrete debris was used in backfilling the UST excavations.

Please contact the undersigned if you have any questions or comments.

Sincerely,

Jim Schollard, R.E.A.  
Project Geologist

## EXCAVATED/STOCKPILED SOIL

Stockpiled Soil volume (estimated)	Sampling Plan
<i>40 yd<sup>3</sup></i>	<i>One sample for every 20 yd<sup>3</sup> maximum</i>

Stockpiled soil must be placed on beamed plastic and must be completely covered by plastic sheeting

Will the excavated soil be returned to the excavation immediately after tank removal?

yes       No       unknown

If yes, explain reasoning \_\_\_\_\_

---

If unknown at this point in time, please be aware that excavated soil may no be returned to the excavation without prior approval from Fire Services Agency, Office of Emergency Services. This means that the contractor, consultant, or responsible party must communicate with the Hazardous Materials Inspector IN ADVANCE of backfilling operations.

**16. Chemical methods and associated detection limits to be used for analyzing samples:**

The Tri-Regional Board recommended minimum verification analyses and practical quantitation reporting limits should be followed.

See attached Table 2.

**17. Submit Site Health and Safety Plan (see Instructions)**

Contaminant Sought	EPA or Other Sample Preparation Method Number	EPA or Other Analysis Method Number	Method Detection Limit
Unleaded Fuel	Soil	TPH-G 8015 mod BTEX 8020 MTBE 8020	1.0 PPM 0.5 PPM 0.5 PPM
If water encountered Unleaded Fuel	Water	TPH-G 8015 BTEX - 602 MTBE - 602	< 50 PPB < 0.5 PPB < 0.5 PPB

**PROPERTY OWNER OR MOST RECENT TANK OPERATOR** (Circle one)

Name of Business Port of Oakland

Name of Individual Neil Werner, Supervisor

Signature Neil Werner Date 3/23/98

**General Instructions**

- Three (3) copies of this plan plus attachments and permit must be submitted to this Department.
- Any cutting into tanks requires Fire Services Agency approval.
- One complete copy of your approved plan must be at the construction site at all times; a copy of your approved plan must also be sent to the landowner.
- State of California Permit Application Forms A and B are to submit to this office One Form A per site, one Form B for each removed tank.

**Line Item Specific Instructions**

**2. SITE ADDRESS**

Address at which closure is taking place.

**5. EPA I.D. NO. - under which the tanks will be manifested**

EPA I.D. numbers may be obtained from the State Department of Toxic Substances Control, 916/324-1781

**6. CONTRACTOR**

Prime contractor for the project.

**10. STATE REGISTERED HAZARDOUS WASTE TRANSPORTERS/FACILITIES**

- a) All residual liquids and sludges are to be removed from tanks before tanks are inerted.
- c) Tanks must be hauled as hazardous waste.
- d) This is the place where tanks will be taken for cleaning.

**15) TANK HISTORY AND SAMPLING INFORMATION**

Use History - This information is essential and must be accurate. Include tank installation date, products stored in the tank, and the date when the tank was last used.

Material to be sampled - e.g. water, oil, sludge, soil, etc.

Location and depth of samples - e.g. beneath the tank a maximum of two feet below the native soil/backfill interface, side wall at the trig} water mark, etc.

**16) CHEMICAL METHODS AND ASSOCIATED DETECTION LIMITS**

See attached Table 2.

**17) SITE HEALTH AND SAFETY PLAN**

A site specific Health and Safety plan must be submitted. We advocate the site health and safety plan include the following items, at a minimum:

- a) The name and responsibilities of the site health and safety officer.
- b) An outline of briefings to be held before work each day to appraise employees of site health and safety hazards;

22) TANK CLOSURE REPORT

The Tank Closure reports: General description of the closure activities, indicate;

- a) Description of tank, fittings and piping conditions. Size and former contents; note any corrosion, pitting, holes;
- b) Description of the excavation itself. Include tank and excavation depth, a log of the stratigraphic units encountered within the excavation, a description of root holes or other potential pathways the depth to any observed ground water, locations of stained or odor-bearing oil, and descriptions of any observed free product or sheen;
- c) Detailed description of sampling methods., i.e. - backhoe bucket, drive sampler, bailed, bottles (s), sleeves;
- d) Description of any remedial measures conducted at the time of tank removal;
- e) To-scale figures showing the excavation size and depth, nearby buildings, sample locations and depths, and tank and piping locations include a copy of the plot plan prepared for the Tank Closure-plan under item #19;
- f) Chain of custody records;
- g) Copies of signed laboratory reports;
- h) Copies of TSDF to Generator Manifests for all hazardous wastes hauled offsite (sludge, Rinsate, tanks and piping, contaminated soil, etc), and
- i) Documentation of the disposal of and volume and final destination all non-manifested contaminated soil disposed offsite.

POLICY NUMBER: 046-98 UNIT 0004886  
CERTIFICATE EXPIRES: 12-99

PORT OF OAKLAND  
530 WATER ST  
OAKLAND CA 94607

JOB: DEMOLITION BUILDING G301,  
G302, G303 & G305

This is to certify that we have issued a valid Workers' Compensation insurance policy in a form approved by the California Insurance Commissioner to the employer named below for the policy period indicated.

This policy is not subject to cancellation by the Fund except upon ten days' advance written notice to the employer.

We will also give you TEN days' advance notice should this policy be cancelled prior to its normal expiration.

This certificate of insurance is not an insurance policy and does not amend, extend or alter the coverage afforded by the policies listed herein. Notwithstanding any requirement, term, or condition of any contract or other document with respect to which this certificate of insurance may be issued or may pertain, the insurance afforded by the policies described herein is subject to all the terms, exclusions and conditions of such policies.

FOR: ERICKSON, INC. TANK NO. 23107

LOCATION: RICHMOND, CA DATE: 7/18/98 TIME: 10:45:29

TEST METHOD VISUAL GASTECH/1314 SMPN LAST PRODUCT UO

This is to certify that I have personally determined that this tank is in accordance with the American Petroleum Institute and have found the condition to be in accordance with its assigned designation. This certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

TANK SIZE 5,000 GALLON TANK CONDITION SAFE FOR FIRE

REMARKS: OXYGEN 20.9% LOWER EXPLOSIVE LIMIT LESS THAN 0.1% ERICKSON, INC. HERBY CERTIFIES THAT THE ABOVE NUMBERED TANK HAS BEEN CUT OPEN, PROCESSED, AND THEREFORE DESTROYED AT OUR PERMITTED HAZARDOUS WASTE FACILITY.  
ERICKSON, INC. HAS THE APPROPRIATE PERMITS FOR, AND HAS ACCEPTED THE TANK SHIPPED TO US FOR PROCESSING.

In the event of any physical or atmospheric changes affecting the gas-free conditions of the above tanks, or if in any doubt, immediately stop all hot work and contact the undersigned. This permit is valid for 24 hours if no physical or atmospheric changes occur.

### STANDARD SAFETY DESIGNATION

SAFE FOR MEN: Means that in the compartment or space so designated (a) The oxygen content of the atmosphere is at least 19.5 percent by volume; and that (b) Toxic materials in the atmosphere are within permissible concentrations; and (c) In the judgment of the Inspector, the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Inspector's certificate.

SAFE FOR FIRE: Means that in the compartment so designated (a) The concentration of flammable materials in the atmosphere is below 10 percent of the lower explosive limit; and that (b) In the judgment of the Inspector, the residues are not capable of producing a higher concentration than permitted under existing atmospheric conditions in the presence of fire and while maintained as directed on the Inspector's certificate, and further, (c) All adjacent spaces have either been cleaned sufficiently to prevent the spread of fire, are satisfactorily inerted, or in the case of fuel tanks, have been treated as deemed necessary by the Inspector.

The undersigned representative acknowledges receipt of this certificate and understands the conditions and limitations under which it was issued.

Project #: 95-113.54

### Case Narrative

This hardcopy data package contains sample results and batch QC for nine samples which were received from the above referenced project on July 1, 1998. The samples were received cold and intact.

**TEH-Diesel by EPA 8015 modified:** All samples were treated with silica gel prior to analysis. The MS/MSD recoveries are not meaningful because the concentration of extractable hydrocarbons detected in the spiked sample is much greater than the spiking levels. The LCS and RPD pass QC limits, and the matrix spike sample was not from this data set. No other analytical problems were encountered.

**Purgeable Halocarbons by EPA 8260:** The pyrene recovery for the matrix spike sample, performed on S-A-7'-N (134353-002), was below QC limits. This appears to be due to sample heterogeneity. The matrix spike duplicate was over the linear-range of the instrument. The LCS recovery for this compound was within QC limits. No other problems were encountered.

---

This memo is to note the revisions Curtis & Tompkins has made to our report #134353. We have revised this report to include MTBE on the BTXE final report forms. Also included in this package is the Oil & Grease hardcopies. Per our conversation on August 26<sup>th</sup>, the Oil & Grease reports were not included in the hardcopy that was mailed to you. I hope that you have everything you need. I apologize for the inconvenience.

Please call me if you have any questions regarding this matter.

Anna Pajarillo  
510-486-0925 x103.

A handwritten signature in black ink, appearing to read "Anna Pajarillo".

HPLC (8310)  
8270  
Covered the 8270  
some samples.
