Subject: Desert Petroleum Site DP 793 Case #RO0000429

Dear Mr. Wickham

This is a notification that we are about to commence with the excavation of contaminated soils at the above mentioned Desert Petroleum Site, DP 793. The excavation has been reduced from approximately 1400 cubic yards to approximately 750 cubic yards by concentrating on only those areas that exhibited the highest concentrations. Other than reducing the amount of contaminated soil to be excavated the excavation as described in the Work plan dated February 13, 2006 will be performed.

I attend to submit the new cost to the UST fund for pre-approval. If you need to discuss the reduction in excavation amounts, please call or email me.

Regards,

George Converse (530) 668-5300 or wege@cal.net
