Re: **2016 Groundwater Monitoring Report**
Former Shell Service Station
1230 14th Street
Oakland, California
Fuel Leak Case No. RO0000433

Dear Ms. Soo:

On behalf of property owner Andy Saberi, Pangea Environmental Services, Inc has prepared this *2016 Groundwater Monitoring Report*. This groundwater monitoring was required by an October 12, 2016 agency email and evaluated conditions after the soil excavation in November 2015. This report describes groundwater monitoring results and recommendations for future action to pursue regulatory case closure.

If you have any questions, please contact me at (510) 435-8664 or by email at briddell@pangeaenv.com.

Sincerely,
Pangea Environmental Services, Inc.

Bob Clark-Riddell, P.E.
Principal Engineer

INTRODUCTION

On behalf of Andy Saberi, Pangea Environmental Services, Inc. (Pangea) conducted groundwater monitoring and sampling at the subject site (Figure 1). This groundwater monitoring was required by an October 12, 2016 agency email and evaluated conditions after the soil excavation in November 2015. This report describes groundwater monitoring results and recommendations for future action to pursue regulatory case closure.

SITE BACKGROUND

The former Shell-branded service station is located at the northeast corner of 14th Street and Union Street in Oakland, California (Figure 1). Currently, an abandoned one-story station building and a pump-island canopy occupy the site, and much of the property is paved except for the former UST excavation and remediation excavation area. Land use in the surrounding area is currently residential to the north, south, and east, and is commercial/industrial to the west and southwest. The site topography is predominantly flat.

Site History

According to prior reports, the current site building was constructed in 1958 and gas station operations at the site reportedly began in 1958. Operations ceased in 1993 and petroleum hydrocarbons were first discovered in soil onsite near the underground storage tanks (USTs) during the completion of three borings at the site in February 1991. Four gasoline USTs and one waste oil storage tank were removed from the site on August 24, 1993. The current property owner, Mr. Andy Saberi, purchased the property in the mid 1980s.

Previous Environmental Work

Previous environmental work has included site assessment, a sensitive receptor evaluation/well survey, risk evaluation, two rounds of feasibility testing (in 2000 and 2006), and several remedial actions. Remedial action included injection of oxygen releasing compound (ORC) into site wells in 1997, groundwater extraction (GWE) and dual-phase extraction (DPE) from 2002 to 2004 (performed with mobile equipment for approximately 11 separate days removing 6.0 lbs aqueous phase and 5.6 lbs vapor phase hydrocarbons), and hydrogen peroxide injection into site wells in 2003. Groundwater monitoring has been performed at the site since 1996.

In January 2008, Pangea submitted a *Draft Corrective Action Plan and Pilot Test Work Plan* (Draft CAP/Test Workplan) as required by Alameda County Department of Environmental Health (ACDEH). In June 2008, with ACDEH approval, Pangea installed new remediation test wells, repaired damaged remediation wells, and destroyed one remediation well, as detailed in the *Well Installation and Destruction Report* dated October 6, 2008. In early July 2008, Pangea conducted the approved pilot testing using the newly installed remediation

Oakland, California
May 2, 2017

test wells to determine whether SVE or DPE would most effectively remove contaminants and capture hydrocarbon vapors resulting from air sparging. In the *SVE/DPE Pilot Test Report* dated October 7, 2008, Pangea recommended DPE/AS as the most effective remedial approach for the site. In a letter dated October 29, 2008, ACDEH approved implementation of DPE/AS remediation at the site. On June 15, 2009, the California UST Cleanup Fund completed a 5-year review of the claim and recommended implementation of site remediation. DPE remediation system operation started in April 2011 and AS system operation commenced in October 2011.

To enhance DPE/AS remedial effectiveness, Pangea began pilot testing bio-organic catalyst (BOC) injection in select site wells. The pilot testing was performed as detailed in the *Workplan for Enhanced Site Remediation* dated March 6, 2012, and as approved by the ACDEH in a letter dated April 17, 2012. In a letter dated September 10, 2012, ACDEH rescinded their BOC pilot test approval due to concerns about offsite migration of site contaminants. On September 25, 2012, Pangea submitted the *Groundwater Monitoring and Remediation Report – First Half 2012*, which described Pangea's efforts to demonstrate control of any hydrocarbon migration initiated by desorption affects of BOC. Continued implementation of enhanced site remediation using BOC was approved by ACDEH in a letter dated October 8, 2012. Site remediation was temporarily discontinued on February 15, 2013 to conduct post-remediation groundwater monitoring. The DPE/AS remediation system was removed from the site in July and August 2015. The layout of the former DPE/AS remediation system is shown on Figure 5.

After insitu remediation, soil and soil gas sampling was conducted at six locations to evaluate conditions as described in the *Soil and Soil Gas Sampling Report* dated April 7, 2015. Select compounds in soil and soil gas at soil gas probe SG-6 exceeded applicable ESLs and/or LTCP criteria. To address the exceedances at location SG-6, Pangea proposed limited soil excavation to target shallow soil impact.

In November 2015, following agency approval, Pangea coordinated soil excavation involving the offsite disposal of 684.6 tons of hydrocarbon-impacted soil. The excavation extent was expanded with agency approval to target elevated soil impact under the northern dispenser island where up to 34 mg/kg benzene had been encountered during exploratory excavation. Shallow overburden was reused with agency approval and an open cut excavation plan was used to avoid costly structural shoring. The final excavation extent is shown on Figure 6.

GROUNDWATER MONITORING AND SAMPLING

On October 31, 2016, Pangea visited the site to evaluate the condition of site groundwater monitoring wells following excavation activities in preparation for groundwater monitoring. Well monitoring was conducted on November 2, 2016, after repairing the plastic sheeting covering the excavation area and removing weeds to gain access to well MW-6. Consistent with the ACDEH email dated October 12, 2016, Pangea attempted to sample all site wells. However, wells MW-2, AS-1, VW/MW-2 and DP-5 were apparently damaged during site excavation and could not be sampled during this monitoring event. Groundwater monitoring this event included sampling of seven site wells (MW-4, MW-5R, MW-6, MW-7, AS-2, AS-4 and DP-1). Each well was gauged for depth-to-water and inspected for separate-phase hydrocarbons (SPH) prior to collection of groundwater samples. Well caps were removed from all monitoring wells at least 15 minutes prior to gauging to allow for water level equilibration.

Prior to sample collection, approximately three casing volumes of water were purged from each monitoring well using disposable bailers. During well purging, field technicians measured pH, temperature, conductivity, oxygen-reduction potential (ORP), and total dissolved solids (TDS). A groundwater sample was collected from each well using a disposable bailer to fill the appropriate containers supplied by the analytical laboratory. Groundwater samples were labeled, placed in protective plastic bags, and stored on crushed ice at or below 4°C. All samples were transported under chain-of-custody to the State-certified analytical laboratory. Groundwater monitoring field data sheets, including purge volumes and field parameter measurements, are presented in Appendix B.

Groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl tertiary butyl ether (MTBE) by EPA Method 8015Cm/8021B. In response to agency direction during an October 12, 2016 meeting, additional sample analyses were conducted for well MW-7 due to its proximity to the former waste oil UST at the site. Samples from well MW-7 was also analyzed for select metals by EPA Method 6010B, mercury by EPA Method 7470/7471, volatile organic hydrocarbons by EPA Method 8260B, and semi-volatile organic hydrocarbons by EPA Method 8270C.

GROUNDWATER MONITORING RESULTS

Current and historical groundwater elevation data and analytical results are described below and summarized on Figure 2 and Table 1. Samples were analyzed by SunStar Laboratories, Inc., of Lake Forest, California, a State-certified laboratory. The laboratory analytical report is included in Appendix C.

Groundwater Flow Direction

Based on depth-to-water measurements taken on November 2, 2016, groundwater generally flows to the *northeast*, as shown on Figure 2. The calculated groundwater gradient is approximately 0.003 ft/ft. This inferred groundwater flow direction consistent with historical groundwater flow.

The groundwater elevation was at or near historic lows in site wells this event. The relatively shallow depth-to-water in well AS-4 is presumably due to its location adjacent to the 2015 excavation. Depth-to-water and groundwater elevation data are presented in Table 1.

Hydrocarbon Distribution in Groundwater

Hydrocarbon concentrations represent historic low levels in all wells sampled this event. The historic low concentrations may be due to the historic or near historic low groundwater elevations observed this event. The maximum concentrations detected this event were 930 µg/L TPHg (well MW-5R) and 48 µg/L benzene (well DP-5). The estimated distribution of TPHg and benzene in groundwater is shown on Figures 3 and 4, respectively.

Fuel Oxygenate Distribution in Groundwater

MTBE was not detected in any site wells during this monitoring event. MTBE concentrations are shown in Table 1 and on Figure 2. Historically, MTBE has only been detected sporadically in site wells. Since 2003, MTBE concentrations have been below the 13 µg/L maximum contaminant level (MCL) for drinking water, with the exception of one detection of 20 µg/L detected in well MW-5 in February 2008. This MTBE result was potentially a false positive result, as EPA Method 8260 was not used to confirm the MTBE detected by EPA Method 8021B. MTBE is not a primary constituent of concern at this site due to limited, sporadic, and potentially false MTBE detections.

Other Chemicals of Potential Concern

Due to its proximity to the former waste oil UST at the site, additional samples from well MW-7 were analyzed for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1, select metals by EPA Method

6010B, mercury by EPA Method 7470/7471, volatile organic hydrocarbons (VOCs) by EPA Method 8260B, and semi-volatile organic hydrocarbons (SVOCs) by EPA Method 8270C. Of these additional analytes, the only detection was of 98 ug/L barium.

FUTURE SITE ACTIVITIES

Data Gap Investigation

Within Pangea's *Excavation Report* dated April 12, 2016, Pangea proposed soil borings adjacent to and within the site building to address data gaps per correspondence with ACDEH former caseworker Wickham. The assessment purpose was to evaluate possible hydrocarbon impact beyond the northern dispenser and along the western and northern boundary of the former UST complex. If the hydrocarbons source was a release from the former USTs, soil quality in the area north and northwest of the former USTs represents a data gap. The proposed boring locations are shown on Figure 6. Proposed procedures for site assessment were included in the *Excavation Report*, and included sample analysis for TPHg, BTEX/MTBE, and naphthalene. Based on recent agency correspondence, Pangea also recommends additional analyses due to the former waste oil UST in this vicinity. Pangea proposes analysis of select soil and groundwater samples from proposed boring DG-4 for TPHd/TPHmo by EPA Method 8015, VOCs by EPA Method 8260B, and SVOCs by EPA Method 8270C. Pangea awaits agency direction regarding future action.

Groundwater Monitoring

If ACDEH wishes to evaluate groundwater conditions during higher groundwater elevation conditions, Pangea would recommend a groundwater monitoring event very soon (e.g., May 2017) due to recent record precipitation this wet season. While the November 2016 results showed historic low hydrocarbon concentrations in key wells, the groundwater elevation was at or near a historic *low* for that monitoring event. Historically, the site groundwater elevation has fluctuated up to approximately 7 ft, with corresponding significant fluctuation in hydrocarbon concentrations. Groundwater monitoring during seasonal high groundwater elevation can help evaluate site conditions with respect to LTCP criteria to assist with case closure evaluation.

Electronic Reporting

This report will be uploaded to the Alameda County FTP site. The report, laboratory data, and other applicable information will also be uploaded to the State Water Resource Control Board's Geotracker database. As requested, report hard copies will no longer be provided to the local agencies.

Notes:

a = Sample was analyzed outside of the EPA recommended holding time.

b = Hydrocarbon reported does not match the pattern of the laboratory's standard.

c = Top of casing change due to maintenance.

d = Sample contains discrete peak in addition to gasoline.

e = Quantity of unknown hydrocarbon(s) in sample based on gasoline.

f = The concentration reported reflects individual or discrete unidentified peaks not matching a typical fuel pattern.

g = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument.

h = Secondary ion abundances were outside method requirements. Identification based on a'-lytical judgement.

i = Analyte was detected in the associated Method Blank.

j = pH>2

k = Analyzed by EPA Method 8015B (M).

l = The sample chromatographic pattern for TPH does not match the chromatographic pattern of the specified standard. Quantitation of the unknown hydrocarbon(s) in the sample was based upon the specified standard.

m = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.

n = MW-6 sample analysis from 9/30/12 not listed due to anomalous results; re-sampled 10/30/12 to confirm anomalous results and concentrations from 10/30 are representative.

o = CTAS/Non-ionic Surfactants by EPA Method 5540D detected at 1,800 ug/L (BOC).

1 = MW-7 was also analyzed for Metals by EPA Method 6010B, Mercury by EPA Method 7470/7471, Volatile Organic Hydrocarbons by EPA Method 8260B, Semi-Volatile Organic Hydrocarbons by EPA Method 8270C. Of these analytes, the only detection was Barium at a concentration of 98 ug/L.

Site surveyed November 1, 2001 by Virgil Chavez Land Surveying of Vallejo, CA.

Site remediation wells surveyed March 21, 2011 by Virgil Chavez Land Surveying of Vallejo, CA.

TPHg = Total petroleum hydrocarbons as gasoline by modified EPA Method 8015C.

Benzene, Toluene, Ethylbenzene, and Xylenes by EPA Method 8260B from April 27, 2001 through August 16, 2007. Concentrations prior to April 27, 2001 and after August 16, 2007 by EPA Method 8021B.

MTBE = Methyl tert-butyl ether by EPA Method 8021B, concentrations in parentheses by EPA Method 8260B

-- = Not applicable

ug/L = micrograms per liter (Parts per billion)

mg/L = milligrams per liter (Parts per million)

MSL = Mean sea level

ft. = Feet

<n = Below detection limit

(D) = Duplicate sample

n/n = Pre-purge/Post-purge Dissolved Oxygen Readings

BOC = Bio-Organic Catalyst

DP-1	Dual Phase Extraction (Rem)	8-20	--	4	Q	Q
DP-5*	Dual Phase Extraction (Rem)	8-20	--	4	Q	Q

Notes and Abbreviations:

1= Sample Analytes: Total Petroleum Hydrocarbons as Gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertiary butyl ether (MTBE) by EPA Method 8015Cm/8021B.

Q = Quarterly, typically March, June, September, December

2nd = Annually during third quarter, typically June

Mon = Groundwater Monitoring Well

Rem= Remediation Well

VW = Vapor Extraction Well

VMP= Vapor Monitoring Well

DP = Dual Phase Extraction

N, S, W, E = Cardinal directions North, South, West, East and other directions (e.g., Northeast = NE)

-- = Not applicable, gauged or sampled.

* = Well damaged during 2015 excavation

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Complete Non-Conformance Sheet

Custody seals intact on cooler/sample Yes No* N/A

Sample containers intact Yes No*

Sample labels match Chain of Custody IDs Yes No*

Total number of containers received match COC Yes No*

Proper containers received for analyses requested on COC Yes No*

Proper preservative indicated on COC/containers for analyses requested Yes No* N/A

Complete shipment received in good condition with correct temperatures,
containers, labels, volumes preservatives and within method specified
holding times Yes No*

* Complete Non-Conformance Receiving Sheet if checked Cooler/Sample Review - Initials and date: DM 11-4-16

Comments: _____

SAMPLE NON-CONFORMANCE SHEET

Batch/Work Order # _____

▪ **COOLERS**

- Not Received (received COC only)
- Leaking/Damaged
- Other:

▪ **CUSTODY SEALS**

- None
- Not Intact

▪ **TEMPERATURE (Temp criteria = $\leq 6^{\circ}\text{C}$)**

- Cooler/Sample Temp(s)
- Temperature Blank(s)

▪ **CHAIN OF CUSTODY (COC)**

- Not relinquished by client; No date/time relinquished
- Incomplete information provided
- COC not received – notify PM

▪ **CONTAINERS**

- | | |
|----------------------------------|----------------------------------|
| <input type="checkbox"/> Leaking | <input type="checkbox"/> Broken |
| <input type="checkbox"/> Extra | <input type="checkbox"/> Missing |

▪ **LABELS**

- Not the same sample ID / info as on the COC
- Incomplete Information
- Markings/Info illegible

▪ **SAMPLES**

- Samples **NOT RECEIVED** but listed on COC
- Samples received but **NOT LISTED** on COC
- Logged based on Label Information and not COC
- Logged according to Work Plan and not COC
- Logged in, **ON HOLD** until further notice
- Insufficient quantities for analysis
- Improper container used
- Mislabeled as to tests, preservatives, etc.
- Holding time expired – list sample ID and test
- Not preserved/Improper preservative used
- Without Labels, no information on containers
- Other

Comments:

Received one VOA that was not labeled.

Sample fractioning only if broken container compromises other samples or if out of temp reading impacts more than one cooler

Fraction											Preser.
VOA
